Órgão: Ministério da Saúde/Agência Nacional de Vigilância Sanitária/Diretoria Colegiada

RESOLUÇÃO RDC Nº 476, DE 10 DE MARÇO DE 2021

Estabelece os procedimentos e requisitos para submissão de pedido de autorização excepcional e temporária para importação e distribuição de medicamentos e vacinas contra Covid19 para o enfrentamento da emergência de saúde pública de importância nacional decorrente do surto do novo coronavírus (SARS-CoV-2), nos termos da Lei nº 14.124, de 10 de março de 2021.

A Diretoria Colegiada da Agência Nacional de Vigilância Sanitária, no uso das atribuições que lhe confere o art. 15, III e IV, aliado ao art. 7º, III e IV, da Lei nº 9.782, de 26 de janeiro de 1999, e ao art. 53, VI, §§ 1º e 3º do Regimento Interno aprovado pela Resolução de Diretoria Colegiada - RDC nº 255, de 10 de dezembro de 2018, resolve adotar a seguinte Resolução, conforme deliberado em Reunião Extraordinária - RExtra nº 4, realizada em 10 de março de 2021, e eu, Diretor-Presidente, determino a sua publicação.

CAPÍTULO I

DAS DISPOSIÇÕES INICIAIS

Art.1º Esta Resolução estabelece os procedimentos e requisitos para submissão de pedido de autorização excepcional e temporária para importação e distribuição de medicamentos e vacinas contra Covid-19 para o enfrentamento da emergência de saúde pública de importância nacional decorrente do surto do novo coronavírus (SARS-CoV-2), nos termos da Lei nº 14.124, de 10 de março de 2021.

Art.2º Poderá ser autorizada a importação excepcional e temporária por Estados, Municípios e Distrito Federal de medicamentos e vacinas para Covid-19 que não possuam registro sanitário ou autorização para uso emergencial no Brasil desde que atendidos os requisitos estabelecidos por esta Resolução.

Parágrafo único. A importação em caráter excepcional e temporária de que trata o caput, por consórcios públicos, será regulamentada por meio de Instrução Normativa a ser publicada pela Anvisa.

Art.3º Poderá ser autorizada a importação excepcional e temporária de vacinas para Covid-19 que não possuam registro sanitário ou autorização para uso emergencial no Brasil, por pessoas jurídicas de direito privado, nos termos da Lei nº 14.125/2021.

§ 1º Para a importação de que trata o caput, deverão ser atendidos os requisitos estabelecidos por esta Resolução de Diretoria Colegiada.

§ 2º As vacinas importadas de acordo com o caput deverão ser utilizadas nos termos do art. 2º da Lei nº 14.125/2021.

§ 3º Requisitos adicionais para importação de vacinas para Covid-19 por pessoas jurídicas de direito privado poderão ser estabelecidos por meio de Instrução Normativa a ser publicada pela Anvisa.

CAPÍTULO II

DA IMPORTAÇÃO DE MEDICAMENTOS E VACINAS PARA COVID-19 NÃO REGULARIZADOS NA ANVISA

Art.4º Caberá ao importador:

I - informar à Anvisa da importação do medicamento ou vacina, descrevendo o país de origem, a identificação do produto e o cronograma pretendido para a importação;

II - peticionar junto à Anvisa o processo de importação, em tempo hábil, com antecedência à chegada da carga ao Brasil;

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1024

III - responsabilizar-se pela qualidade, eficácia e segurança do medicamento ou vacina a ser importado;

IV - assegurar e monitorar as condições da cadeia de transporte;

V - assegurar que os produtos importados estejam com o prazo de validade vigente;

VI - estabelecer mecanismos para garantir condições gerais e manutenção da qualidade dos medicamentos e vacinas importados e o seu adequado armazenamento;

VII - no caso de vacinas ou medicamentos que requeiram armazenamento sob refrigeração, assegurar o monitoramento contínuo da temperatura de conservação e transporte, durante o trânsito internacional, desde o momento do embarque até a chegada ao local de armazenamento do importador e notificar à Anvisa, imediatamente, caso tenha ocorrido excursão de temperatura que possa comprometer a qualidade do produto;

VIII - responsabilizar-se pela avaliação das excursões de temperatura que venham a ocorrer durante o transporte dos produtos importados;

IX - prestar orientações aos serviços de saúde sobre uso e cuidados de conservação dos produtos importados, assim como aos pacientes sobre como notificar as queixas técnicas e eventos adversos a eles relacionados;

X - criar mecanismos para a realização do monitoramento pós-distribuição e pós-uso dos produtos importados e para que os casos de queixas técnicas e eventos adversos identificados sejam informados à Anvisa, por meio dos sistemas de informação adotados;

XI - responsabilizar-se pelo recolhimento do produto importado quando determinado pela Anvisa ou quando houver indícios suficientes ou comprovação de desvio de qualidade, que possa representar risco à saúde;

XII - informar aos pacientes de que o medicamento ou a vacina para Covid-19 não possui registro e nem autorização temporária para uso emergencial, em caráter experimental, concedido pela ANVISA e que o referido produto apenas possui aprovação em agência regulatória sanitária estrangeira; e

XIII - apresentar a documentação requerida ao Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da Resolução de Diretoria Colegiada - RDC nº 73, de 21 de outubro de 2008.

Art.5º Caberá à Anvisa:

I - monitorar o perfil de queixas técnicas e eventos adversos associados aos produtos importados nos termos desta Resolução; e

II - adotar as ações de controle, monitoramento e fiscalização sanitária pertinentes.

Art.6º Os eventos adversos graves, relacionados aos produtos importados nos termos desta Resolução, devem ser comunicados à Anvisa em até 24 horas por meio do sistema VigiMed ou e-SUS Notifica, disponíveis para acesso pelo endereço https://www.gov.br/anvisa/pt-br.

Art.7º A notificação de queixas técnicas deve ser realizada no Sistema de Notificações em Vigilância Sanitária, disponível em versão eletrônica no portal da Anvisa.

Art.8º Os medicamentos e vacinas para Covid-19 poderão ser importados com embalagens, rótulos e bulas nos padrões e idiomas estabelecidos pela autoridade sanitária internacional responsável pela aprovação do seu registro ou uso emergencial.

§ 1º Caberá ao importador a adoção de ações de mitigação de risco considerando as diferenças de informações e formatos entre as embalagens, rótulos e bulas originais em comparação com as diretrizes regulatórias nacionais.

§ 2º O importador deverá disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português.

Art.9º Os lotes das vacinas importados nos termos desta Resolução somente poderão ser destinados ao uso após liberação pelo Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da Resolução de Diretoria Colegiada - RDC nº 73, de 21 de outubro de 2008.

DA IMPORTAÇÃO DE MEDICAMENTOS E VACINAS PARA COVID-19 REGISTRADOS POR AUTORIDADES SANITÁRIAS ESTRANGEIRAS

Art. 10. A importação excepcional e temporária de medicamentos e vacinas para Covid-19 registrados por autoridades sanitárias estrangeiras deve ser submetida à apreciação e autorização pela Diretoria Colegiada da Anvisa.

§ 1º O produto objeto da importação deve ter sido registrado por, no mínimo, uma das seguintes autoridades sanitárias internacionais e autorizado à distribuição em seus respectivos países:

I - Food and Drug Administration (FDA), dos Estados Unidos da América;

II - European Medicines Agency (EMA), da União Européia;

III - Pharmaceuticals and Medical Devices Agency (PMDA), do Japão;

IV - National Medical Products Administration (NMPA), da República Popular da China;

V - Medicines and Healthcare Products Regulatory Agency (MHRA), do Reino Unido da Grã-Bretanha e Irlanda do Norte;

VI - Federal Service for Surveillance in Healthcare, da Federação da Rússia;

VII - Central Drugs Standard Control Organization (CDSCO), da República da Índia;

VIII - Korea Disease Control and Prevention Agency (KDCA), da República da Coreia;

IX - Health Canada (HC), do Canadá;

X - Therapeutic Goods Administration (TGA), da Comunidade da Austrália;

XI - Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT), da República Argentina;

XII - Outras autoridades sanitárias estrangeiras com reconhecimento internacional e certificadas, com nível de maturidade IV, pela Organização Mundial de Saúde (OMS) ou pelo Conselho Internacional para Harmonização de Requisitos Técnicos para Registro de Medicamentos de Uso Humano (International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use - ICH) e pelo Esquema de Cooperação em Inspeção Farmacêutica (Pharmaceutical Inspection Co-operation Scheme - PIC/s).

§ 2º Os produtos importados estão dispensados de registro sanitário e autorização temporária de uso emergencial emitidos pela Anvisa.

§ 3º Os produtos importados devem possuir, pelo menos, estudos clínicos de fase 3 concluídos ou com resultados provisórios de um ou mais estudos clínico.

§ 4º Os produtos importados devem ter qualidade, segurança e eficácia atestadas por meio da comprovação do registro pelas autoridades sanitárias internacionais definidas no § 1º.

§ 5º Os produtos importados devem ter indicação específica para tratamento ou prevenção da Covid-19 aprovada pela respectiva autoridade sanitária estrangeira.

§ 6º Os produtos importados devem ser destinados exclusivamente ao uso em programas públicos de saúde, com exceção do previsto no § 1º do art. 2º da Lei nº 14.125/2021.

§ 7º Todos os lotes do produto a ser fornecido a partir da autorização excepcional e temporária para a importação devem atender às condições aprovadas pela autoridade sanitária internacional.

Art. 11. Para a importação de medicamentos e vacinas para Covid-19 registrados por autoridades sanitárias estrangeiras nos termos do art. 10 devem ser cumpridos os seguintes requisitos:

I. Peticionamento eletrônico de importação, nos termos do Capítulo III, Seção I, da Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008;

II. A descrição da mercadoria na licença de importação deve conter a inscrição "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

III. Apresentação do comprovante de autorização excepcional e temporária de importação concedida pela Diretoria Colegiada da Anvisa;

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1026

IV. Certificado de liberação do lote, incluindo o laudo analítico de controle de qualidade do produto acabado e, quando existir, do diluente, emitido pelo fabricante;

V. Conhecimento de carga embarcada, podendo, na instrução processual inicial, ser apresentada versão preliminar desse documento;

VI. Licenciamento de importação (LI) registrado no SISCOMEX; e

VII. Autorização de Funcionamento (AFE) do importador, quando couber.

Art. 12. O dossiê para a concessão de autorização excepcional e temporária para importação de medicamentos e vacinas para Covid-19 registrados por autoridades sanitárias estrangeiras nos termos do art. 10 deve ser instruído com os seguintes documentos:

I - declaração informando tratar-se de importação de medicamento ou vacina para Covid-19 nos termos da Lei nº 14.124/2021 ou nº 14.125/2021;

II - no caso de vacinas, declaração assinada pelo chefe do Poder Executivo e pelo Secretário de Saúde que ateste o descumprimento do Plano Nacional de Operacionalização da Vacinação contra a Covid-19 ou daquele que vier a substituí-lo, no caso da importação ser realizada por Estados, Municípios e pelo Distrito Federal;

III - declaração que ateste a adoção das estratégias de monitoramento e cumprimento das diretrizes de farmacovigilância, conforme modelo Anexo a esta Resolução;

IV - comprovação de registro por autoridade sanitária internacional nos termos do art. 10; e

V - Licenciamento de importação (LI) registrado no SISCOMEX.

§ 1º Fica dispensada a apresentação de demais documentos previstos na Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008, bem como a restrição quanto à liberação sob Termo de Guarda e Responsabilidade contida no artigo 4º da Resolução de Diretoria Colegiada - RDC nº 234, de 17 de agosto de 2005.

§ 2º A manifestação da Anvisa sobre o pedido de autorização excepcional e temporária para a importação de medicamentos e vacinas para Covid-19 de que trata o caput será emitida em até 07 (sete) dias úteis a contar do protocolo do processo de importação junto à Anvisa.

§ 3º Anvisa poderá requerer, fundamentadamente, a realização de diligências para complementação e esclarecimentos sobre os dados de qualidade, de eficácia e de segurança dos medicamentos e vacinas para Covid-19.

§ 4º As solicitações de esclarecimento pela Anvisa suspenderão a contagem do prazo determinado no § 2º até que sejam atendidas.

Art. 13. A importação de medicamentos e vacinas para Covid-19 somente se efetivará mediante deferimento de Licenciamento de Importação junto ao SISCOMEX.

§ 1º A critério da autoridade sanitária, devido à necessidade de apresentação de informação complementar, a saída do produto da área alfandegada poderá ocorrer por meio de sujeição a Termo de Guarda e Responsabilidade, por lote, registrada no campo referente ao texto da situação do licenciamento de importação: "PRODUTO SOB EXIGÊNCIA SANITÁRIA. A LIBERAÇÃO À INDUSTRIALIZAÇÃO, EXPOSIÇÃO À VENDA OU ENTREGA AO CONSUMO DAR-SE-Á MEDIANTE MANIFESTAÇÃO EXPRESSA DA AUTORIDADE SANITÁRIA".

§ 2º Na situação prevista no §1º, a utilização dos produtos apenas pode ocorrer após liberação do Termo de Guarda e Responsabilidade.

§ 3º O importador deve realizar o pedido de liberação do produto mediante a apresentação da petição de liberação de Termo de Guarda e Responsabilidade.

Art. 14. As condições de aprovação de cada importação concedida nos termos do art. 10 serão divulgadas no portal eletrônico da Anvisa.

§ 1º As condições de aprovação serão definidas a partir de pareceres elaborados pelas áreas técnicas competentes pelas atividades de registro, certificação de Boas Práticas de Fabricação e farmacovigilância de medicamentos.

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1027

§ 2º As áreas técnicas avaliarão de forma prioritária as solicitações de autorização excepcional e temporária de importação.

SEÇÃO II

DA IMPORTAÇÃO DE MEDICAMENTOS E VACINAS PARA COVID-19 AUTORIZADOS PARA USO EMERGENCIAL POR AUTORIDADES SANITÁRIAS ESTRANGEIRAS

Art. 15. A importação excepcional e temporária de medicamentos e vacinas para Covid-19 autorizados para uso emergencial por autoridades sanitárias estrangeiras deve ser submetida à apreciação e autorização pela Diretoria Colegiada da Anvisa.

§ 1º O produto objeto da importação deve ter sido autorizado para uso emergencial por, no mínimo, uma das seguintes autoridades sanitárias internacionais e autorizada à distribuição em seus respectivos países:

I - Food and Drug Administration (FDA), dos Estados Unidos da América;

II - European Medicines Agency (EMA), da União Européia;

III - Pharmaceuticals and Medical Devices Agency (PMDA), do Japão;

IV - National Medical Products Administration (NMPA), da República Popular da China;

V - Medicines and Healthcare Products Regulatory Agency (MHRA), do Reino Unido da Grã-Bretanha e Irlanda do Norte;

VI - Federal Service for Surveillance in Healthcare, da Federação da Rússia;

VII - Central Drugs Standard Control Organization (CDSCO), da República da Índia;

VIII - Korea Disease Control and Prevention Agency (KDCA), da República da Coreia;

IX - Health Canada (HC), do Canadá;

X - Therapeutic Goods Administration (TGA), da Comunidade da Austrália;

XI - Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT), da República Argentina;

XII - Outras autoridades sanitárias estrangeiras com reconhecimento internacional e certificadas, com nível de maturidade IV, pela Organização Mundial de Saúde (OMS) ou pelo Conselho Internacional para Harmonização de Requisitos Técnicos para Registro de Medicamentos de Uso Humano (International Council for Harmonization of Technical Requirements for Pharmaceuticals for Human Use - ICH) e pelo Esquema de Cooperação em Inspeção Farmacêutica (Pharmaceutical Inspection Co-operation Scheme - PIC/s).

§ 2º Os produtos importados estão dispensados de registro sanitário e autorização temporária de uso emergencial emitidos pela Anvisa.

§ 3º Os produtos importados devem possuir, pelo menos, estudos clínicos de fase 3 concluídos ou com resultados provisórios de um ou mais estudos clínico.

§ 4º Os produtos importados devem ter qualidade, segurança e eficácia atestadas por meio da comprovação da autorização de uso emergencial pelas autoridades sanitárias internacionais definidas no § 1º deste artigo.

§ 5º Os produtos importados devem ter indicação específica para tratamento ou prevenção da Covid-19 aprovada pela respectiva autoridade sanitária estrangeira.

§ 6º Os produtos importados devem ser destinados exclusivamente ao uso em programas públicos de saúde, com exceção do previsto no § 1º do art. 2º da Lei nº 14.125/2021.

Art. 16. Para a importação de medicamentos e vacinas para Covid-19 autorizados para uso emergencial por autoridades sanitárias estrangeiras nos termos do art. 15 devem ser cumpridos os seguintes requisitos:

I. Peticionamento eletrônico de importação, nos termos do Capítulo III, Seção I, da Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008;

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1028

II. A descrição da mercadoria na licença de importação deve conter a inscrição "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

III. Apresentação do comprovante de autorização excepcional e temporária de importação concedida pela Diretoria Colegiada da Anvisa;

IV. Certificado de liberação do lote, incluindo o laudo analítico de controle de qualidade do produto acabado e, quando existir, do diluente, emitido pelo fabricante;

V. Conhecimento de carga embarcada, podendo, na instrução processual inicial, ser apresentada versão preliminar desse documento; e

VI. Licenciamento de importação (LI) registrado no SISCOMEX.

Art. 17. O dossiê para a concessão de autorização excepcional e temporária para importação de medicamentos e vacinas para Covid-19 autorizados para uso emergencial por autoridades sanitárias estrangeiras nos termos do art. 15 deve ser instruído com os seguintes documentos:

I - declaração informando tratar-se de importação de medicamento ou vacina para Covid-19 nos termos da Lei nº 14.124/2021 ou nº 14.125/2021;

II - relatório técnico da avaliação do medicamento ou vacina para Covid-19 emitido ou publicado pela autoridade sanitária internacional responsável pela concessão da autorização para uso emergencial nos termos do art. 13;

III - no caso de vacinas, declaração assinada pelo chefe do Poder Executivo e pelo Secretário de Saúde que ateste o descumprimento do Plano Nacional de Operacionalização da Vacinação contra a Covid-19 ou daquele que vier a substituí-lo, no caso da importação ser realizada por Estados, Municípios e pelo Distrito Federal;

IV - declaração que ateste a adoção das estratégias de monitoramento e cumprimento das diretrizes de farmacovigilância, conforme modelo Anexo a esta Resolução;

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15;

VI - Licenciamento de importação (LI) registrado no SISCOMEX; e

VII. Autorização de Funcionamento (AFE) do importador, quando couber.

§ 1º Fica dispensada a apresentação de demais documentos previstos na Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008, bem como da restrição quanto a liberação sob Termo de Guarda e Responsabilidade contida no artigo 4º da Resolução de Diretoria Colegiada - RDC nº 234, de 17 de agosto de 2005.

§ 2º A manifestação da Anvisa sobre o pedido de autorização excepcional e temporária para a importação de medicamentos e vacinas para Covid-19 de que trata o caput será emitida em até 07 (sete) dias úteis a contar do protocolo do processo de importação junto à Anvisa.

§ 3º Na ausência do relatório técnico de avaliação de uma autoridade sanitária internacional, conforme previsto no inciso IV do caput, o prazo de decisão da Anvisa será de até 30 (trinta) dias.

§ 4º Anvisa poderá requerer, fundamentadamente, a realização de diligências para complementação e esclarecimentos sobre os dados de qualidade, de eficácia e de segurança dos medicamentos e vacinas para Covid-19.

§ 5º As solicitações de esclarecimento pela Anvisa suspenderão a contagem do prazo determinado nos §§ 2º e 3º até que sejam atendidas.

§ 6º O relatório estabelecido no inciso IV do caput deve ser capaz de comprovar que o produto atende aos padrões de qualidade, de eficácia e de segurança estabelecidos pela OMS ou pelo ICH e pelo PIC/s.

§ 7º Todos os lotes do produto a ser fornecido a partir da autorização excepcional e temporária para a importação devem atender às condições aprovadas pela autoridade sanitária internacional.

Art. 18. A importação de medicamentos e vacinas para Covid-19 somente se efetivará mediante deferimento de Licenciamento de Importação junto ao SISCOMEX.

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1029

§ 1º A critério da autoridade sanitária, devido à necessidade de apresentação de informação complementar, a saída do produto da área alfandegada poderá ocorrer por meio de sujeição a Termo de Guarda e Responsabilidade, por lote, registrada no campo referente ao texto da situação do licenciamento de importação: "PRODUTO SOB EXIGÊNCIA SANITÁRIA. A LIBERAÇÃO À INDUSTRIALIZAÇÃO, EXPOSIÇÃO À VENDA OU ENTREGA AO CONSUMO DAR-SE-Á MEDIANTE MANIFESTAÇÃO EXPRESSA DA AUTORIDADE SANITÁRIA".

§2º Na situação prevista no §1º, a utilização dos produtos apenas pode ocorrer após liberação do Termo de Guarda e Responsabilidade.

§ 3º O importador deve realizar o pedido de liberação do produto mediante a apresentação da petição de liberação de Termo de Guarda e Responsabilidade.

Art. 19. As condições de aprovação de cada importação concedida nos termos do art. 15 serão divulgadas no portal eletrônico da Anvisa.

§ 1º As condições de aprovação serão definidas a partir de pareceres contendo os dados técnicos apresentados à Anvisa na solicitação de autorização de importação excepcional e temporária.

§ 2º Os pareceres estabelecidos no parágrafo anterior serão elaborados pelas áreas técnicas competentes pelas atividades de registro, certificação de Boas Práticas de Fabricação e farmacovigilância de medicamentos.

§ 3º A Anvisa poderá utilizar de consultores Ad Hoc para emissão de parecer consultivo quanto aos relatórios apresentados para subsidiar a importação excepcional e temporária dos medicamentos e vacinas para Covid-19 nos termos desta Resolução.

§ 4º As áreas técnicas avaliarão de forma prioritária as solicitações de autorização de uso emergencial.

CAPÍTULO III

DAS DISPOSIÇÕES FINAIS

Art. 20. A ANVISA poderá, observada a legislação vigente, editar Instrução Normativa contendo requisitos complementares aos dispostos nesta Resolução.

Art. 21. Com base em informações provenientes do controle e do monitoramento dos produtos definidos por esta Resolução ou outras informações técnicas ou científicas que venham a ser de conhecimento desta Anvisa, a Agência poderá suspender a importação, distribuição e uso dos produtos importados nos termos desta Resolução, além de outras medidas que entender cabíveis conforme legislação vigente.

Art. 22. O descumprimento das disposições contidas nesta Resolução constitui infração sanitária, nos termos da Lei n. 6.437, de 20 de agosto de 1977, sem prejuízo das responsabilidades civil, administrativa e penal cabíveis.

Art. 23. A vigência desta Resolução cessará automaticamente a partir do reconhecimento pelo Ministério da Saúde de que não mais se configura a situação de Emergência em Saúde Pública de Importância Nacional declarada pela Portaria nº 188/GM/MS, de 3 de fevereiro de 2020.

Art. 24. Esta Resolução entra em vigor na data de sua publicação.

ANTONIO BARRA TORRES

Anexos: RDC Nº 476, DE 10 DE Março DE 2021 - Pedido de autorização excepcional e temporária - Covid.pdf

Prezada Regina e Renata, boa tarde!

Em aditamento ao e-mail abaixo restou pendente outra declaração que deve ser emitida pelo PNI, conforme exposto na RDC 476/2021 (anexa).
Esta declaração não foi posta em exigência quando a Anvisa retornou com suas considerações, mas como iremos iniciar um novo pedido contendo documentação mais robusta, é prudente anexarmos também essa outra declaração, conforme previsto no artigo 17, inciso I:

> *Art. 17. O dossiê para a concessão de autorização excepcional e temporária para importação de medicamentos e vacinas para Covid-19 autorizados para uso emergencial por autoridades sanitárias estrangeiras nos termos do art. 15 deve ser instruído com os seguintes documentos:*
>
> *I - declaração informando tratar-se de importação de medicamento ou vacina para Covid-19 nos termos da Lei nº 14.124/2021 ou nº 14.125/2021;*

Informo ainda que em continuação à reunião realizada ontem (16/04/21) na Anvisa, na data de hoje serão apresentados os documentos da empresa antes da submissão à Agência e qualquer dúvida em relação aos mesmos pode ser esclarecida nesta reunião - fico à disposição.

Abraços,

Ariadne Bonvino

Assunto: Pendência Anvisa quanto a autorização da Covaxin CT 29/2021 (25000.043170/2021-42)

Prezados fiscais e colegas do DEIDT,

De acordo com o Ofício 663/2021 da Anvisa, a agência relata que sendo o Ministério da Saúde o importador, somos nós que devemos apresentar a declaração que ateste adoção de estratégias de monitoramento, conforme disposto abaixo:

...

III - Na LI (1382702), o Ministério da Saúde configura como importador. Dessa forma, deve ser apresentada a declaração que ateste a adoção das estratégias de monitoramento e cumprimento das diretrizes de farmacovigilância, conforme modelo Anexo à RDC 476/2021, assinada pelo Chefe do Poder Executivo.

Diante da exigência exarada pela Anvisa, solicitamos providenciar junto ao PNI tal declaração, uma vez que é a área responsável por executar tais ações

Desde já agradecemos.

Att.

Assunto: ENC: Demanda O GLOBO_Governo tentou comprar vacina perto do prazo de validade

Prezado Boechat, boa tarde. Pode nos auxiliar na matéria abaixo?

Meu nome é Leandro Prazeres. Sou repórter do GLOBO.

Estou fazendo uma matéria sobre documentos do processo de importação da Covaxin.

Verificamos que, no pedido de licenciamento de importação feito pelo MS ao Siscomex, o MS informou que o lote a ser importado da vacina era o 37F21004A e que sua validade seria em janeirod e 2023.

Verificamos também que, no pedido de importação feito pelo MS à Anvisa, as informações sobre a vacina foram dadas sobre outros lotes, a saber: 37620001A, 37620002A e 37620003A.

Verificamos também que a Anvisa pediu esclarecimentos sobre essas divergências e, sobretudo, com relação à validade do lote 37F21004A.

Dessa forma, gostaríamos de questionar o seguinte:

1 - Por que o MS inseriu dados do lote 37F21004A tendo data de validade até 1/2023 quando a autoridade sanitária indiana informa que o lote teria validade de seis meses?

2 - A Anvisa alerta que, considerando os dados do lote 37F21004A, as vacinas chegariam no Brasil com pouco mais de um mês para expirar. Gostaria de saber por que o Ministério da Saúde quis importar vacinas que chegariam no Brasil próximo do seu prazo de expiração?

3 - Por que o MS informou dados de um lote pro Siscomex e dados de outros lotes para a Anvisa?

4 - Que medidas o Ministério da Saúde tomou para sanar as questões levantadas pela Anvisa?

5 - O Ministério da Saúde avalia que importar vacinas perto de sua data de expiração é uma estratégia adequada?

Segue em anexo as tratativas via e-mail para abertura de LI da Vacina Covaxin.

Tratativas complementares, especialmente em relação às questões colocadas pela Anvisa encontram-se no processo 25000.043170/2021-42.

Falta inserir neste processo a ata da reunião de hoje que ainda não foi disponibilizada, mas já adianto que teve caráter muito técnico, especialmente referente às Boas Práticas de Fabricação, estudos clínicos, etc, com duração de quase 4 horas, cujo desfecho e relevância para nossa coordenação seria apenas termos ciência de que a empresa ainda não dispõe da documentação necessária para abrirmos um novo processo de importação.
Nossa parte é apenas aguardar o recebimento dos documentos pela empresa para os protocolarmos junto à Anvisa.

Att.
Ariadne.

Boa noite,

Sugiro tirar a última frase do primeiro parágrafo, pois não se trata de autorização para o uso, mas sim de autorização para importação:

~~"Cabe à Anvisa analisar tecnicamente de acordo com a legislação e a autorização para o uso."~~

O restante está ok.

Assunto: ENC: Demanda O GLOBO_Governo tentou comprar vacina perto do prazo de validade

Prezada Ariadne, boa noite. Pode validar a nota abaixo, por favor?

Sugestão de resposta:

O Ministério da Saúde informa que de acordo com os documentos fornecidos pelo fabricante Invoice/Packing List quem insere os dados na Licença de Importação é o despachante, neste caso a empresa Wegh. Foram repassados à Agência Nacional de Vigilância Sanitária (ANVISA) os documentos fornecidos pela empresa Precisa Medicamentos, representante do laboratório indiano Barath Biontec. ~~Cabe à Anvisa analisar tecnicamente de acordo com a legislação e a autorização para o uso.~~

É importante esclarecer que a importação de qualquer vacina está condicionada à manifestação favorável da ANVISA de acordo com a legislação vigente. Após o Ministério da Saúde receber o questionamento da ANVISA sobre a validade dos lotes das vacinas a serem importadas, encaminhou à empresa Precisa para esclarecimentos, a qual se manifestou, por meio do Ofício que informou que "o *prazo de validade aprovado pela autoridade Indiana para a vacina Covaxin é de 6 meses, se conservada de 2-8º, porém, os estudos de estabilidade acelerada já avançaram tal período. Dessa forma, a Precisa Medicamentos, apresenta a possibilidade de assinatura de um termo de compromisso assegurando que nenhum produto importado, terá percorrido mais que 30% de sua validade."*

Por fim, os dados presentes na documentação apresentada são de inteira responsabilidade de seus fornecedores. A Anvisa utiliza os dados inseridos no Sistema Integrado de Comércio Exterior-Siscomex para análise da importação, impossibilitando a inserção de dados divergentes.

Assunto: RES: Demanda O GLOBO_Governo tentou comprar vacina perto do prazo de validade

Prezada Lídia, boa tarde!

Este Departamento esclarece aos itens questionados, conforme segue:

Dessa forma, gostaríamos de questionar o seguinte:

1 - Por que o MS inseriu dados do lote 37F21004A tendo data de validade até 1/2023 quando a autoridade sanitária indiana informa que o lote teria validade de seis meses?

Primeiramente, informa-se, que não é este Ministério da Saúde-MS que insere os dados na Licença de Importação-LI, mas o despachante desta Pasta, no caso, a empresa Wegh, de acordo com os documentos fornecidos pelo fabricante (INVOICE / PACKING LIST).

Foram repassados à Agência Nacional de Vigilância Sanitária (ANVISA) os documentos fornecidos pela empresa Precisa Medicamentos, representante do laboratório indiano Barath Biontec, em sua totalidade, cabendo à referida agência reguladora a análise de seu caráter técnico em conformidade com legislação afeta ao tema e autorização para uso.

2 - A Anvisa alerta que, considerando os dados do lote 37F21004A, as vacinas chegariam no Brasil com pouco mais de um mês para expirar. Gostaria de saber por que o Ministério da Saúde quis importar vacinas que chegariam no Brasil próximo do seu prazo de expiração?

A importação de qualquer vacina está condicionada à manifestação favorável da ANVISA e em consonância com a legislação vigente.

Após o MS receber o questionamento da ANVISA sobre a validade dos lotes das vacinas a serem importadas, encaminhou à empresa Precisa para esclarecimentos, a qual se manifestou, por meio do Ofício nº 002/2021, de 25/03/2021, conforme segue:

"(...) o prazo de validade aprovado pela autoridade Indiana para a vacina Covaxin é de 6 meses, se conservada de 2-8º, porém, os estudos de estabilidade acelerada já avançaram tal período. Dessa forma, a Precisa Medicamentos, apresenta a possibilidade de assinatura de um termo de compromisso assegurando que nenhum produto importado, terá percorrido mais que 30% de sua validade."

3 - Por que o MS informou dados de um lote pro Siscomex e dados de outros lotes para a Anvisa?

Os dados presentes na documentação apresentada são de inteira responsabilidade de seus fornecedores, não cabendo a esta Pasta explanar sobre este tema.

No entanto, ressalta-se que a ANVISA utiliza os dados inseridos no Sistema Integrado de Comércio Exterior-Siscomex para análise da importação, impossibilitando a inserção de dados divergentes.

4 - Que medidas o Ministério da Saúde tomou para sanar as questões levantadas pela Anvisa?

Encaminhou questionamento à empresa Precisa, a qual retornou por meio do ofício supracitado.

5 - O Ministério da Saúde avalia que importar vacinas perto de sua data de expiração é uma estratégia adequada?

Item já respondido conforme resposta da questão 2, que esclarece que a empresa enviaria um termo de compromisso assegurando que não seria enviada nenhuma vacina tendo transcorrido 30% da vida útil desses insumos.

Assunto: Re: Covaxin - Autorização Excepcional

Prezada Ariadne, bom dia.

Conforme falamos, na última quinta tivemos uma reunião com o Comitê Covid da ANVISA – Com foco. No estudo clínico - o qual após encerrar a videoconferência nos enviaram alguns apontamentos/questionamentos para atendermos especificamente quanto a Autorização Emergencial.

A Daniela Marreco/DIRE5 nos orientou que respondêssemos, mas alertou que nem todos são aplicáveis para a Autorização Excepcional. Sendo assim, ela se colocou a disposição para nos reunirmos caso tivéssemos alguma dúvida sobre qual dos questionamentos seriam impactantes para o pedido de autorização excepcional.

Também foi acordado durante a reunião, que a BBIL enviaria no sábado o segundo report interino, porém eu recebi somente o draft, pois o ICMR – Indian Council Medical Research pediu mais um dia para concluir a revisão e autorizar a divulgação. E conforme e-mail anexo, eles irão nos enviar até o final do dia de hoje. De qualquer forma, eu estou utilizando o draft para avançar nas respostas.

Até o final do dia de hoje irei concluir e enviar a análise do Medical Affairs da BBIL, e eles vão precisar do dia de amanhã para analisarem se houve algum apontamento do ICMR e retornarem. Sendo assim, podemos marcar nossa reunião para amanhã após as 15h do BRT, que já terá encerrado o dia aqui na Índia e já terei as questões para apresentar a Daniela e contar com a ajuda dela para a classificação, pois realmente precisamos entender qual das respostas é de extrema valia para a autorização excepcional.

Peço desculpas por não termos conseguido enviar o relatório no sábado, mas infelizmente estamos com 4 casos de COVID19 no departamento de qualidade do ICMR o que atrasou a análise do mesmo.

Permanecemos a disposição,

Emanuela Medrades

Assunto: Solicitação de autorização excecional para importação em de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN

Senhor Diretor Presidente,

Considerando trata-se de processo de aquisição celebrado entre este Ministério da Saúde (MS) e a empresa BHARAT BIOTECH LIMITED INTERNATIONAL, representada pela empresa PRECISA COMERCIALIZAÇÃO DE MEDICAMENTOS LTDA, CNPJ: 03.394.819/0005-00, com sede na Avenida Portugal nº 1100, Rua 5, Parte A-14-B, Itaqui, Itapevi/SP, CEP: 06.696-060, pelo instrumentado Contrato 29/2021 para aquisição de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN/BBV152 divididos em 05 (cinco) parcelas de 4.000.000 (quatro milhões) cada;

Considerando que o fabricante **BHARANT BIOTECH INTERNATIONAL LIMITED (BBIL)** localizado na **Genome Valley, Shameerpt, Hyderabad, Telangana, Índia**, não possui registro sanitário junto a Agência Nacional de Vigilância Sanitária (ANVISA);

Considerando Decreto Legislativo nª 06 de 20 de março de 2020 que ratifica o Reconhecimento, para os fins do art. 65 da Lei Complementar nº 101, de 4 de maio de 2000, a ocorrência do estado de calamidade pública, nos termos da solicitação do Presidente da República encaminhada por meio da Mensagem nº 93, de 18 de março de 2020;

Consideração que na data de 11, de março de 2020 a Organização Mundial da Saúde (OMS) declarou estado de Pandemia, em consequência da disseminação vírus Covid-19;

Considerando o disposto na Resolução da Diretoria Colega (RDC) nº 476, de 10 de março de 2021 que estabelece os procedimentos e requisitos para submissão de pedido de autorização excepcional e temporária para importação e distribuição de medicamentos e vacinas contra Covid19 para o enfrentamento da emergência de saúde pública de importância nacional decorrente do surto do novo coronavírus (SARS-CoV-2), nos termos da Lei nº 14.124, de 10 de março de 2021; e

Considerando tratar-se de insumo essencial para o enfrentamento da Pandemia de SARS-COV-2, este Departamento de Logística (DLOG/SE-MS), vem por meio deste, *mui respeitosamente,* solicitar a Vossa Senhoria autorização para importação **EM CARÁTER EXCEPCIONAL das 20.000.000 (vinte milhões) de doses,** objeto do contrato em questão, afim de seja dada a devida continuidade deste processo.

DOSSIÊ PARA CONCESSÃO PARA AUTORIZAÇÃO EXCEPCIONAL E TEMPORÁRIA DE IMPORTAÇÃO DE VACINA PARA O COVID-19 AUTORIZADOS PARA USO EMERGENCIAL POR AUTORIDADES SANITÁRIAS ESTRANGEIRAS NOS TERMOSDO ART/15 DA RDC 476 DE 10 DE MARÇO DE 2.021.

Ref. IMPORTAÇÃO DE VACINA PARA COVID 19 AUTORIZADAS PARA USO EMERGENCIAL POR AUTORIDADE ESTRANGEIRA

A Precisa Comercialização de Medicamentos Ltda, inscrita no CNPJ. 03.394.819/0005-00, representante exclusiva da Bharat Biotech International Limited desenvolvedora da vacina COVAXIN contra SARS-CoV-2, desenvolvida com base na tecnologia de virion inteiro inativado, com origem na Índia, o qual firmou o contrato de número 29/2.021 com o Ministério da Saúde em 25 de fevereiro de 2.021 com o compromisso de fornecer (vinte milhões) de doses para utilização pela união através do PNO – Plano Nacional de Operacionalização da Vacina contra Covid19, conforme cronograma apresentado no TR.

Considerando que:

- Conforme RDC 476 de 2.021, seguindo as exigências de tal resolução, apresentamos as documentações exigida para as vacinas que possuem autorização de uso emergencial em autoridades sanitárias estrangeiras;
- Com base no contrato assinado, o importador e *consignee* será o Ministério da Saúde através do Departamento de Logística em Saúde – DLOG bem como responsável pelas ações de Farmacovigilância.

1. Capítulo II – Art. 4 Item 1 da RDC 476 de 10 de março de 2.021:

1.1. Da Caracterização do produto

A caracterização do produto, bem como a informações pertinentes a qualidade e produção, foram peticionadas nos seguintes expedientes: 1214929212 e 1219797211 (DDCM) e 1809912212,1812880217 e 181255429 (Submissão Contínua).

1.2. Da origem do produto

Nome	Endereço	Responsabilidade	Fase do ensaio clínico
Bharat Biotech International Limited. País de Origem **ÍNDIA**	Sy.No.230, 231 & 235, Turkapally, GenomeValley, Shamirpet Mandal, Medical-Malkajgiri District, Telangana, India – 500078.	Processo Produtivo completo	Fase II/III

1.3. Do cronograma pretendido para a importação

O cronograma de importação foi fundamentado de acordo com o contrato 29/2021 assinado para fornecimento de 20 milhões de doses da Covaxin em 5 embarques de 4 milhões de doses.

A primeira importação terá início após anuência da ANVISA através da Diretoria Colegiada conforme artigo 10 da Seção I;

Tão logo a anuência seja concedida, a Precisa Medicamentos enviará as informações pertinentes a importação, bem como Fatura Comercial (*Proforma Invoice*), *Packing List* e demais documentos em concordância com as legislações atuais, sendo RDC 208/2018 e demais aplicadas ao SISCOMEX e importações de produtos biológicos.

2. Capítulo II – Art. 17 da RDC 476 de 10 de março de 2.021

Listamos os documentos a serem apresentados de acordo com os itens da resolução conforme a seguir:

2.1. Do Dossiê para a concessão de autorização Excepcional e temporária para importação de medicamentos e vacinas para Covid-19 autorizadas para uso emergencial por autoridades sanitárias estrangeiras, nos termos do art. 17 da RDC 476/2021:

I. Declaração informando trata-se de importação de medicamento ou vacina para Covid -19 nos termos da lei n°14.124/2.021

[Anexo I – Declaração assinada pela Secretaria Executiva nos termos da lei n° 14.124/2.021.]

II. Relatório técnico de avaliação do medicamento ou vacina para Covid-19 emitido ou publicado pela autoridade sanitária internacional responsável pela concessão da autorização para uso emergencial nos termos do art. 13.

[Anexo II – CDSCO -Relatório Técnico de avaliação e autorização do país de Origem]

III. Declaração que ateste a adoção das estratégias de monitoramento e cumprimento das diretrizes de Farmacovigilância – Modelo em anexo a RDC; \

[Anexo III – Declaração conforme modelo Anexo assinada pela Secretaria Executiva nos termos da RDC 476/2021.]

IV. Comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do artigo 15.

[Anexo IV – COFEPRIS -Relatório Técnico de avaliação e autorização de autoridade pertencente aos PIC/s]

V. Licenciamento de importação (LI) registrado no SISCOMEX; e

[Anexo V – Declaração com informações referente a Fatura Comercial para abertura de registro de LI).

VI. Autorização de Funcionamento (AFE) do importador, quando couber. (Não se aplica)

3. Dos documentos Complementares

A Precisa Medicamentos insere os documentos complementares que subsidiarão as gerências da ANVISA na emissão de seus pareceres. Dessa forma, segue para apreciação:

[Anexo VI – Protocolo CBPF – Linha estéril e comprovante de transação solicita quanto ao CBPF IFA – aguardando compensação bancária]

[Anexo VII – CAPA referente a Inspeção da ANVISA/GGFIS e suas respectivas conclusões]

[Anexo VIII *Interim Integrated Clinical And Statistical Report* – Dados de segurança e eficácia através do segundo report interino do estudo clínico de fase 3.]

No mais, informamos o compromisso de que todas as doses a serem enviadas ao Brasil estarão em concordância com todas as ações aplicadas ao CAPA *report,* sendo todas produzidas após 15 de abril de 2021 e com validade em acordo com produção, promovendo tempo razoável para aplicação pelo programa PNO do Ministério da Saúde.

Permanecemos a disposição para qualquer esclarecimento,

Atenciosamente.

Subject- Permission to manufacture of Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in Form CT-23 as per the provisions of New Drugs and Clinical Trials Rules, 2019 under Drugs & Cosmetics Act, 1940 - regarding.

Reference:

1. Permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002dated 03.01.2021.
2. Your letter nos. BBIL/RA/21/173, 177, 187 dated 06.03.2021, 08.03.2021 & 10.03.2021 submitted to this office vide email dated 06.03.2021, 08.03.2021 & 10.03.2021.

Sir,

This is with reference to the permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002 dated 03.01.2021 to manufacture Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode with various conditions.

In this regard, the interim safety and efficacy data of phase III clinical trial of Whole Virion, Inactivated Corona Virus Vaccine (BBV152) in the country submitted to this office was reviewed in consultation with SEC (COVID-19) committee on 08.03.2021 & 10.03.2021 respectively, wherein after detailed deliberation the committee recommended for omission of the condition of the use of the vaccine in clinical trial mode. However, the vaccine should be continued to be used under restricted use in emergency situation condition. Further, the ongoing phase III clinical trial should be continued as per the approved protocol. The firm should update the prescribing information and factsheet accordingly (under restricted use in emergency situation condition). All other conditions of the marketing authorisation shall continue to remain the same.

Accordingly, based on the recommendations of SEC, the condition "*This permission is for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode*" as mentioned in the said permission is amended to read as "*This permission is for restricted use in emergency situation in public interest*". However, you are required to continue ongoing Phase III clinical trial as per approved clinical trial protocol & submit revised summary of product characteristics (SmPC), Prescribing Information (PI) and Factsheet.

Yours faithfully,

(Dr. V. G. Somani)

FORM CT-23
(*See rules 81, 82, 83 and 84*)

PERMISSION TO MANUFACTURE PHARMACEUTICAL FORMULATION OF NEW DRUG FOR SALE OR FOR DISTRIBUTION

The Central Licensing Authority hereby grant permission to M/s Bharat Biotech International Limited, Sy. No. 230, 231 & 235, Genome Valley, Shameerpet Mandal, Medchal-Malkajgiri District, Telangana State- 500078. Telephone No.: nil, Fax: nil, E-Mail:dra@bharatbiotech.com, Telephone No.: nil, Fax: nil, E-Mail:dra@bharatbiotech.com to manufacture for sale of pharmaceutical formulation manufactured by a manufacturer specified below.

2. Details of manufacturer and its manufacturing site under this license:

S. No	Name and address of manufacturer (full name and address with telephone and e-mail address of manufacturer).	Name and address of manufacturing site (full name and address with telephone and e-mail address of manufacturing site).
1.	Bharat Biotech International Limited, Sy. No. 230, 231 & 235, Genome Valley, Shameerpet Mandal, Medchal-Malkajgiri District,Telangana State- 500078. Telephone No.: nil, Fax: nil, E-Mail:dra@bharatbiotech.com	Bharat Biotech International Limited, Sy. No. 230, 231 & 235, Genome Valley, Shameerpet Mandal, Medchal-Malkajgiri District,Telangana State- 500078. Telephone No.: nil, Fax: nil, E-Mail:dra@bharatbiotech.com **Component** — **Manufacturing facility** Drug substance — • Facility PS2, Building S Drug Product — • Building A, Facility PA1

3. Details of pharmaceutical formulation:

Name of the New drug to be manufactured:	Whole Virion Inactivated Corona Virus Vaccine, [BBV152B]
Dosage form:	Suspension for injection Presentation: single dose glass vial (0.5ml) Route of Administration: Intramuscular
Composition:	Each dose of 0.5ml contains: **Active Ingredients** — **Quantity** Whole Virion, Inactivated Corona Virus antigen (Strain: NIV-2020-770) — 6 mcg **Inactive Ingredients** — **Quantity** Aluminium Hydroxide gel equivalent to Al+++ — 250 mcg TLR 7/8 Agonist — 15 mcg 2-Phenoxyethanol (2PE) I.P. — 2.5 mg Phosphate Buffered Saline — q.s. to 0.5 mL * Produced in Vero cells.
Indication:	For active immunization against Corona Virus Disease (COVID-19) for age ≥18 years when administered in two doses interval of day 0 & day 28.
Shelf life with storage condition:	6 months when stored at 2 to 8 °C.

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1067

4. This is subject to the conditions prescribed in Chapter X of the New Drugs and Clinical Trials Rules, 2019 under the Drugs and Cosmetics Act,1940.
5. This permission is for restricted use in emergency situation in public interest as an abundant precaution, in clinical trial mode.
6. The firm should provide the protocol for rolling out for the restricted use of the vaccine in emergency situation.
7. The firm should provide the updated prescribing information/ Package Insert and Summary of Product Characteristics (SmPC) for Whole Virion Inactivated Corona Virus Vaccine (BBV152B) and also disseminate the necessary information, instructions and educational materials through their website.
8. The firm should submit updated safety, efficacy & immunogenicity data from the ongoing Phase I, II & III clinical trials till the completion of trials as per requirement of New Drugs & Clinical Trials, 2019.
9. The firm should submit safety data including the data on AEFI and AESI, with due analysis, every 15 days for the first two months & monthly thereafter and also as per requirement of New Drugs & Clinical Trials, 2019.
10. The firm should submit Risk management plan.
11. The firm should submit ongoing stability of commercial scale batches (real time and accelerated) of drug substance & drug product.
12. The permission is subject to condition of satisfactory evaluation & lot release by CDL, Kasauli. Further, each batch/lot of Whole Virion Inactivated Corona Virus Vaccine, (BBV152B) shall be released from Central Drugs Laboratory, Kasauli.

anticuerpos, enfermedades graves o no controladas (cardiovascular, respiratoria, gastrointestinal, neurológica, insuficiencia hepática, insuficiencia renal, patologías endócrinas), antecedentes de anafilaxia (2ª dosis de la vacuna).

Fórmula:

Cada dosis de 0.5 mL contiene:

Fármaco			
Antígeno del SARS-CoV-2 Inactivado, virión completo	6	mcg	Cepa NIV-2020-770 Inactivado. Células Vero, medio DMEM suplementado con suero fetal de ternera o suero fetal bovino,.
Aditivos			
Hidróxido de aluminio	250	mcg	Gel, equivalente a Al^{3+}, adyuvante.
Galamida imidazoquinolina	15	mcg	Agonista TLR 7/8, adyuvante.
2-Fenoxietanol	2.5	mg	
Fosfatos	0.5	mL	cs. Solución amortiguadora de fosfatos: Ortofosfato de hidrógeno disódico dihidrato, Ortofosfato dihidrógeno sódico monohidrato, Ácido clorhídrico.

La vacuna puede contener residuos de seroalbúmina bovina, tripsina-r, tripsina, β-propiolactona, sulfato de neomicina, formaldehído.

Vía de Administración: Intramuscular

Consideraciones de uso: Inyectable

Hago de su conocimiento lo siguiente:

a).- Se emite el presente oficio para el producto denominado "**Covaxin**", con la finalidad de que pueda importar para su uso en Instituciones Públicas del Gobierno de nivel Federal y Estatal que conforman el Sistema Nacional de Salud.

b).- La vigencia de la presente autorización para uso de emergencia, será provisional en apoyo a las acciones de atención para la pandemia decretada por la Organización Mundial de la Salud, el 11 de marzo de 2020, y será válida únicamente durante la duración de la misma, hasta la publicación en el Diario Oficial de la Federación del Acuerdo de terminación de las acciones extraordinarias para atender la emergencia sanitaria generada por el virus SARS-COV2.

COF 012789

c).- Se continuará con la revisión del expediente presentado y una vez que se decrete la terminación de la Emergencia Sanitaria, se procederá a emitir la correspondiente resolución de conformidad con las disposiciones legales sanitarias aplicables.

d).- A lo largo de la vigencia del presente oficio, deberán ingresar a esta Comisión, la información técnica-científica que se vaya generando en materia de la calidad, seguridad y eficacia de la vacuna.

e).- La presente autorización para uso de emergencia será revocada ante cualquier alteración a las condiciones y términos en los que fue otorgada, sin perjuicio de las sanciones que en su caso correspondan, asimismo, en caso de presentarse alguna determinante que demuestre la falta de calidad, seguridad y eficacia de la vacuna autorizada en el presente documento.

f).- La importación y uso de la vacuna autorizada por uso de emergencia deberá estar de acuerdo a las condiciones aprobadas en el presente oficio.

g).- El titular de la autorización dará cumplimiento a las actividades de Farmacovigilancia, conforme a los lineamientos acordados con el Centro Nacional de Farmacovigilancia.

h).- Se deberá ingresar en el dossier de registro sanitario el Plan de Manejo de Riesgos actualizado.

i).- Vacuna dirigida al Programa Nacional de vacunación contra el virus SARS-CoV-2 para la prevención de la COVID-19.

j).- Se incluyen en el presente 07 anexos consistentes en: Caja de cartón para 1 o 16 frascos ámpula y etiqueta para frasco ámpula de 0.5 mL, 5 mL o 10 mL e instructivo anexo.

Whole-Virion, Inactivated Corona Virus Vaccine
COVAXIN™

1. NAME AND DESCRIPTION OF THE MEDICINAL PRODUCT:
COVAXIN™ (Whole-Virion Inactivated Corona Virus Vaccine) is a white translucent liquid free from particulate matter containing 6 mcg of Whole-Virion, Inactivated Corona Virus Antigen (strain NIV-2020-770).
COVAXIN™ can be administered to the individuals ages ≥ 18 years.

2. QUALITATIVE AND QUANTITATIVE COMPOSITION:
Each dose of 0.5mL contains:

Active Ingredient	Quantity
Whole-Virion, Inactivated Corona Virus Antigen (Strain: NIV-2020-770)	6 µg
Inactive Ingredients	
Aluminium Hydroxide Gel equivalent to Al^{+++}	0.25 mg
TLR7/8 Agonist	15 µg
2-Phenoxyethanol IP	2.5 mg
Phosphate Buffered Saline	q.s. to 0.5 mL

3. PHARMACEUTICAL FORM:
Sterile liquid for injection.

4. CLINICAL PARTICULARS
4.1 Therapeutic indication
Whole-Virion, Inactivated Corona Virus Vaccine is indicated for active immunization against SARS-CoV-2 Virus infection for age ≥18years. This vaccine is permitted for restricted use in Emergency situation in Clinical Trial mode, under the provisions of New Drugs and Clinical Trials Rules, 2019, under Drugs & Cosmetics Act 1940

4.2 Posology and method of administration.
Whole-Virion, Inactivated Corona Virus Vaccine should be administered as two doses on Day 0 and Day 28.
Method of administration: Intramuscular injection (IM).
Once opened, multi-dose vials should be used as soon as possible and within 6 hours when kept at between 2-8°C.

4.3 Contraindications
- Hypersensitivity to any constituents of the vaccine.
- Pregnant and lactating mothers.
- During fever or severe infection.
- Individuals below 18 years.

4.4 Special warnings and precautions for use
- Do not administer intravenously, intradermally, or subcutaneously.
- Like all other vaccines, supervision and appropriate medical treatment should always be available to treat any anaphylactic reactions following immunization.
- The vaccinee should remain under medical supervision for at least 30 minutes after vaccination.

Before use, Whole-Virion, Inactivated Corona Virus Vaccine should be shaken well to obtain a uniform, whitish translucent suspension. Vial should be visually checked for the presence of any particulate matter or other coloration. If any, prior to its administration. If in doubt, do not use the contents of the vial. Whole-Virion, Inactivated Corona Virus Vaccine should not be mixed with other vaccines.

4.5 Interaction with other medicinal products.
Chloroquine and Corticosteroids as they may impair the antibody response.

4.6 Pregnancy and Lactation
Safety and effectiveness has not been established in pregnant women and in nursing mothers.

4.7 Effects on ability to drive and use machines
No studies on the effect of Whole-Virion, Inactivated Corona Virus Vaccine on the ability to drive and use machines have been performed.

4.8 Undesirable effects
Clinical Trial Experience
Safety of the Whole-Virion, Inactivated Corona Virus Vaccine vaccine was established in the on going Phase 1 and Phase 2 studies.

Phase 1 clinical trial was conducted in India in 375 adult healthy volunteers which is still on going. The most common local adverse event reported was Injection site Pain. The most common systemic adverse events reported were headache, followed by fatigue, fever, body ache, abdominal pain, nausea, and vomiting. The other less common adverse events were dizziness/giddiness, tremor, sweating, cold, cough, and injection site swelling. No vaccine related serious adverse events (SAE) were reported.

A Phase 2 clinical trial was conducted in India in 380 adolescents and adult healthy volunteers which is still on going. Similar adverse events were reported in the phase 2 clinical trial. No vaccine related serious adverse events (SAE) were reported.

A Phase 3 efficacy study is on-going in 25800 participants and administered with 1st dose of vaccination with Whole-Virion, Inactivated Corona Virus Vaccine no vaccine related adverse events were observed.

4.9 Immune Response
COVID-19 disease is caused due to SARS-CoV-2 virus infection.
In Phase 1 clinical trial a total of 375 healthy participants were enrolled across the three groups and received three vaccine formulations, BBV152A (3µg with Algel-IMDG (Aluminium hydroxide gel- Imidazo quinoline gallamide (IMDG); a TLR 7/8 agonist), BBV152B (6µg with Algel-IMDG), and BBV152C (6µg with Algel). None of the participants had detectable neutralizing antibodies at baseline analyzed by MNT_{90}. The proportion of participants seroconverted post 2 weeks after 2nd dose was 87.9%, 91.9%, and 82.8% in the BBV152A, B, and C, groups, respectively.

In Phase 2 clinical trial a total of 380 healthy participants were enrolled among two groups and received two vaccine formulations, BBV152 A and BBV152B. None of the participants had detectable neutralizing antibodies at baseline analyzed by MNT_{90}. The proportion seroconverted participants of Group 1 and Group 2, post 4 weeks of 2nd dose was 88.0% and 96.6% respectively.

4.10 Overdose
No case of overdose has been reported.

5. PHARMACOLOGICAL PROPERTIES
5.1. Pharmacodynamic properties
COVID-19 disease is caused due to SARS-CoV-2 virus infection. Whole-Virion, Inactivated Corona Virus Vaccine is a whole virion inactivated SARS-CoV-2 virus vaccine, has been studied in Phase 1 and 2 clinical studies for safety and immunogenicity and found to be safe and immunogenic. Whole-Virion, Inactivated Corona Virus Vaccine has been shown to prevent COVID-19 following 2 doses given 4 weeks apart. The duration of protection against COVID-19 is currently unknown.

5.2 Pharmacokinetic properties
Evaluation of pharmacokinetic properties is not required for vaccines.

5.3 Preclinical safety data
All the formulations were tested for immunogenicity in mice, rats, and rabbits. Mice, rats, and rabbits were vaccinated on days 0, 7, and 14 (n+1 doses). Further these formulations are tested for immunogenicity, safety, and protective efficacy in Syrian Hamster challenge model and Non-Human Primates (*Rhesus macaque*) challenge model. The Hamsters were vaccinated on Days 0, 14, and 35 (n+1 doses), the live SARS-CoV-2 virus was challenged through intranasal route on Day 50. Likewise, the Rhesus macaques were vaccinated on Days 0 and 14, and live SARS-CoV-2 virus was challenged through intranasal and intratracheal routes on Day 28. All the formulations were found to be safe, immunogenic, and provided effective protection to both upper and lower respiratory tract.

6.PHARMACEUTICAL PARTICULARS
6.1 List of excipients
- Aluminum hydroxide gel
- TLR7/8 Agonist
- 2-Phenoxyethanol
- Phosphate Buffered Saline

Note : TLR 7/8 agonist is an Imidazo quinoline gallamide (IMDG)

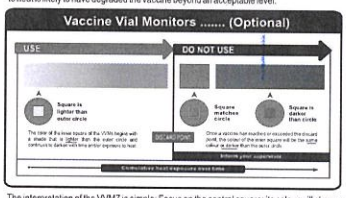
6.2 Incompatibilities
The product should not be mixed with any other medicinal products or active immunizing agents.

6.3 Shelf life
The expiry date of Whole-Virion. Inactivated Corona Virus Vaccine is indicated on the label and carton of the product. Do not use the product after the expiration date shown on the label and carton of the product.

6.4 Special precautions for storage
Store at +2° to +8 °C, do not freeze. Discard if frozen.
Shake well before use. Keep out of reach of children. Protect from light.

7. PRESENTATION
Whole-Virion, Inactivated Corona Virus Vaccine is presented in USP type 1 glass.
Single dose vial - 0.5mL
Multi dose vial - 5.0mL (10 dose)
Multi dose vial - 10.0mL (20 dose)

8. The Vaccine Vial Monitor (Optional)
Presentation available with or without vaccine vial monitor
Vaccine Vial Monitors (VVM7) dot is on the seal of the Whole-Virion, Inactivated Corona Virus Vaccine vials supplied through Bharat Biotech. VVM7 are supplied by TEMPTIME Corporation, USA. This is a time-temperature sensitive dot that provides an indication of the cumulative heat to which the vial has been exposed. It warns the end user when exposure to heat is likely to have degraded the vaccine beyond an acceptable level.



The interpretation of the VVM7 is simple: Focus on the central square; its colour will change progressively. As long as the colour of this square is lighter than the colour of the ring, the vaccine can be used. As soon as the colour of the central square is the same colour as the ring or of a darker colour than the ring, the vial should be discarded.

Revision date: January 2021

Title: An Event-Driven, Phase 3, Randomized, Double-blind, Placebo-controlled, Multicenter Study to Evaluate the Efficacy, Safety, Immunogenicity, and Lot-to-Lot consistency of BBV152, a Whole-virion Inactivated SARS-CoV-2 Vaccine in Adults ≥18 Years of Age.

Protocol No.: BBIL/BBV152-C/2020

Investigational Vaccine: Whole-Virion Inactivated SARS-CoV-2 vaccine (BBV152B).

Study Population: A total sample size of 25,800 volunteers ages 18 years and above were recruited and administered with vaccine and placebo in 1:1 ratio.

The study was conducted in 25 sites all zone of India.

1. INTRODUCTION

The outbreak of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2/COVID-19) has, as on March 05th,2021, spread to over 216 countries across the globe, with a total of ~115 Million confirmed cases and ~ 2.5 Million deaths. The number of reported SARS-CoV-2 cases in India is also on an increase with ~11 Million confirmed cases and ~157000 deaths(1). Coronaviruses are a severe threat to the humans and other animals, earlier other members of the same family coronaviridae, SARS-CoV infected ~8000 people with a death rate of 10% and another member Middle East Respiratory Syndrome (MERS) virus was outbroken in the Middle East region and infected ~2000 people with 35% fatality rate(2) . Porcine epidemic diarrhea coronavirus (PEDV) has swept throughout the United States of America, causing an almost 100% fatality rate in piglets and wiping out more than 10% of America's pig population in less than a year(2).

Coronaviruses are the enveloped positive-stranded RNA viruses which have the largest genome among all RNA viruses with approximately 27 to 32 kb2. The viral genome is packed inside a helical capsid formed by the nucleocapsid protein (N) which is surrounded by an envelope. SARS-CoV viral envelope is associated with at least three structural proteins: The membrane protein (M) and the envelope protein (E) are involved in virus assembly, whereas the spike protein (S) mediates virus entry into host cells. Among these structural proteins, the spike forms large protrusions from the virus surface, giving coronaviruses the appearance of having crowns(2).

The SARS-CoV-2 virus transmits from person to person mainly through respiratory droplets(3).
The inhaled virus SARS-CoV-2 likely binds to epithelial cells in the nasal cavity and starts replicating. ACE2 is the main receptor for both SARS-CoV-2 and SARS-CoV(4,5). There is local propagation of the virus but a limited innate immune response. At this stage, the virus can be detected by nasal swabs. Although the viral burden may be low, these individuals are infectious. The RT-PCR value for the viral RNA might be useful to predict the viral load and the subsequent infectivity and clinical course. The virus propagates and migrates down the respiratory tract along the conducting airways, and a more robust innate immune response is triggered. Nasal swabs or sputum should yield the virus (SARS-CoV-2) as well as early markers of the innate immune response(6). The symptoms of SARS-CoV-2 infection appear after an incubation period of ~5 days(7). The period from the onset of SARS-CoV-2 symptoms to death ranged from 6 to 41 days with a median of 14 days. This period is dependent on the age of the patient and the status of the patient's immune system. It was shorter among patients >70 years old compared with those under the age of 70(8). The most common symptoms at the onset of SARS-CoV-2 illness are fever, cough, and fatigue, while other symptoms include sputum production, headache, hemoptysis, diarrhea, dyspnoea, and lymphopenia(9).

Till date, no specific treatment was recommended for SARS-CoV-2 infection hence, vaccines are a critical new tool in the battle against COVID-19. Various types of COVID-19 vaccines, such as DNA, RNA- based formulations, Recombinant subunit vaccines containing the viral protein (Spike) epitopes, vector based formulations (eg: Adeno virus) and traditional inactivated vaccines were developed(10–12). Bharat Biotech Int. Ltd., India has developed a whole-virion inactivated Covid-19 vaccine and evaluated for its safety and immunogenicity in a Phase 1 followed by phase 2 study and found that vaccine is safe and immunogenic(13,14). Bharat Biotech has been conducting a phase 3 efficacy study in 25,800 participants to evaluate the efficacy of the vaccine.

2. STUDY DESIGN

The study is an endpoint-driven randomized, double-blind, phase 3 study to evaluate the Efficacy, Safety, and Immunogenicity of BBV152B, a Whole-Virion Inactivated SARS-CoV-2 Vaccine in Volunteers aged 18 years and above.

A total of 25,800 subjects were enrolled across India in 25 sites (3 Categories) and randomized in a 1:1 ratio to receive BBV152B vaccine and control. All participants will be assessed for efficacy and safety endpoints and provide a NP swab and blood sample before the first dose of IP. The NP swab and blood collected will be subject to RT-PCR and Anti-SARS-CoV-2 IgG antibodies. The results of this will not affect enrolment of the participant. Participants who are found to be positive for either RT-PCR or Anti-SARS-CoV-2 IgG antibodies will be excluded from the primary efficacy analysis.

The additional 5,000 participants in the Brazil Arm will be recruited from the Month of June 2021.

The purpose of this Phase 3 study is to evaluate the protective efficacy, safety, and immunogenicity of the whole-virion inactivated SARS-CoV-2 vaccine, BBV152B. The Phase 3 study will follow randomized study participants for efficacy until virologically confirmed (RT-PCR positive) symptomatic COVID-19 participants will be eligible for the primary efficacy analysis. After reaching the target number (n=130) of symptomatic COVID-19 cases, the study will continue to assess safety until the completion of the study duration.

Case Definition of symptomatic COVID-19

The study is designed to accrue 130 symptomatic COVID-19 cases.This includes any participant who meets any of the two below following criteria:

• Case Definition for Primary Efficacy Symptomatic Endpoint

• Case Definition for Severe Symptomatic COVID-19

Any one of the below mentioned criteria (A or B) must be met, along with a positive SARS-CoV-2 RT-PCR confirmation to be a confirmed symptomatic case

Criteria A: One or More		**Criteria B: Two or More**
1. Shortness of Breath/Difficulty in Breathing 2. New onset Anosmia/Aguesia 3. Oxygen saturation of <94% or escalation by requiring supplemental Oxygen. 4. Pneumonia: diagnosed by chest X ray or CT scan 5. Evidence of Shock **6.** ICU Admission/Death	or	1. Fever 2. Chills 3. New cough 4. Myalgia/Fatigue 5. Headache 6. Sore throat 7. Nausea/Vomiting 8. Diarrhea 9. Congestion/ Runny Nose
	AND	
Positive SARS-CoV-2 RT-PCR test		

Case Definition of symptomatic COVID-19 (Severe)

Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following clinical manifestations:

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1091

1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%)
2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO)
3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors)
4. Significant acute renal, hepatic, or neurologic dysfunction
5. Admission to an ICU
6. Death

SITE CATEGORIES:

Category 1 (Symptomatic): In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15 day intervals.

Category 2 (Symptomatic/Asymptomatic): In addition to administering the IP, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

Category 3 (Symptomatic/Asymptomatic+Immunogenicity): In addition to administering the IP, repeated NP swabs for asymptomatic, a series of blood samples will be collected for analyzing serum for immunological assessments.

3. STUDY POPULATION

As per the approved protocol, a total of 25,800 subjects were enrolled and received either vaccine or placebo in 1:1 ratio. Among these 25,800 participants 24,455 were received second dose and detailed site wise enrolled participants, second dose recipients and the participants who were followed up till Day 42 were listed in the Table 1.

3.1 AT-RISK POPULATION

In this study both healthy volunteers and participants with high risk for Covid-19 who is, either ≥ 60 years of age or < 60 years of age with co-morbid conditions, and HCPs were recruited.

Participants who are < 60 years old will be categorized as at risk for severe COVID-19 illness if they have at least 1 of the following risk factors at Screening:

- Stable chronic lung disease (eg, emphysema and chronic bronchitis), idiopathic pulmonary fibrosis and cystic fibrosis) or mild to moderate asthma.
- Stable cardiac disease (eg, heart failure, coronary artery disease, congenital heart disease, cardiomyopathies, hypertension, and pulmonary hypertension).
- Severe obesity (body mass index ≥ 35 kg/m2).
- Controlled Diabetes (Type 1, Type 2).
- Stable Liver disease.

Participants who has high risk for Covid-19 were summarized in the Table 2 (>60 Years) and Table 3 (< 60 with Co-morbid condition).

3.2 GENDER AND AGEWISE CLASSIFICATION OF THE PARTICIPANTS:

In the study both the genders were recruited, among 25800 participants 17332 (67.2%) were male and 8468 (32.8%) were female participants. Detailed description of the participants categorized by their age and gender was depicted in the Table 4.

TABLE 4: GENDERAND AGE WISE CLASSIFICATION OF THE PARTICIPANTS

Gender	≥18 to <50	≥51 to <60	≥60 to above
Male	13790 (53.45%)	2085 (8.08%)	1457 (5.65%)
Female	6242 (24.19%)	1250 (4.84%)	976 (3.78%)

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1094

4. SAFETY

There are 25,800 participants were recruited in the study. It is decided to consider all AEs reported till 11 am (IST) March 1, 2021 for first 8000 enrolled participants. All the participants were followed up telephonically for 7 days after each dose of vaccination and reported all the solicited AEs. Unsolicited AEs from all the participants were reported throughout follow-up period (Till Day 42). A total of 655 adverse events were reported and equally distributed in both vaccine and placebo groups. Among these 655 AEs 605 were mild, 34 were moderate and 16 were severe and the severity of the AEs is similar in both the groups. All the AEs except 20 were resolved without sequelae. Detailed AEs list is summarized in the Table 6.

TABLE 6: SUMMARY OF ADVERSE EVENTS

Description	Treatment Arm		
	BBV152 (N=4,061) n (%)	**Placebo (N=3,804) n (%)**	**Total (N=7,865) n (%)**
No of Subject with at least one Adverse Event	335 (8.25)	300 (7.89)	635 (8.07)
No of Subjects with at least one Local Solicited AE within 7 days after Day 0 Vaccination (1 event not resolved)	99 (2.44)	94 (2.47)	193 (2.45)
No of Subjects with at least one Local Solicited AE within 7 days after Day 28 Vaccination (1 event not resolved)	55 (1.35)	39 (1.03)	94 (1.20)
No of Subjects with at least one Systemic Solicited AE within 7 days after Day 0 Vaccination (1 event not resolved)	94 (2.31)	55 (1.45)	149 (1.89)

Severe	9 (0.22)	7 (0.18)	16 (0.20)

4.1 SERIOUS ADVERSE EVENTS

All the participants (25800) were followed up for serious adverse events (SAEs) and 70 SAEs were reported till 7th April 202, and among those cases 48 were resolved, 14 cases are ongoing and 8 deaths were reported. All the SAEs were not related to the vaccine and distributed equally among the two treatment groups. Detailed description of the SAEs is given in the Table 7.

5. IMMUNOGENICITY

The Immunogenicity assessment was planned on the subset of the 600 participants who were recruited in the category 3 sites. All the blood samples from these participants were collected on Day 0, Day 28, Day 56 and these samples are being analysed. The immunogenicity data in terms geometric mean titers (GMTs) by neutralizing antibody, S-protein, and RBD specific anti-IgG binding titer will be submitted to CDSCO and will be available by June 15th, 2021.

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1101

6. EFFICACY (INTERIM ANALYSIS)

We are considering first 127 RT-PCR (2/3 of 130 as proposed in 2nd interim analysis) positive events and analysis has been done by taking data confirmed by sites. Participants who received two doses and not having PD (protocol deviation) are considered in efficacy population. The second interim analysis is based on 127 events, of which 104 events of COVID-19 were observed in the placebo group versus 23 events observed in the BBV152 (COVAXIN®) group, resulting in a point estimate of vaccine efficacy of 77.9%.

The initial second interim efficacy was planned to be triggered after accruing 87 events. However, due to the recent surge in India (Second Wave – April, 2021), the study accrued 127 events rapidly and were presented ot the DSMB.

TABLE 7: EFFICACY of BBV152

Description	**Treatment Arm**		
	BBV152 (N = 12219)	**Placebo (N=12198)**	**Total (N =24417)**
First occurrence of Virologically confirmed (RT-PCR) n (%)	23 (0.188)	104 (0.853)	127 (0.520)
VE (%)	77.9		
98.78% CI	[60.8, 88.4]		
p value	<0.0001		

Mensagem Parte 05 (0021609999) SEI 25000.100536/2021-98 / pg. 1102

Among these 127 cases, we have assessed the efficacy of the BBV152 vaccine against severe COVID-19 cases and found to be 100% efficacious.

TABLE 8: Efficacy Analysis of Secondary Endpoint Severe Cases

Description	Treatment Arm		
	BBV152 (N=12219)	**Placebo (N=12198)**	**Total (N=24417)**
First occurrence of Virologically confirmed (RT-PCR), n (%)	0(0.000)	9 (0.074)	9 (0.037)
VE Point Estimate	**1.000**		
90% CI	**[0.605, 1.000]**		

Data available in Interim CSR (Available by June 30th, 2021)

1. Complete Statistical Report (25,800 participants):
    A. Solicited/Unsolicited/Serious AE's till 2-months post dose-2
    B. Efficacy of 130 Symptomatic Events
    C. Asymptomatic Efficacy from 36 events
    D. Efficacy against variants of concern
        i. Variants such as B.1.617 and 1.1.7

7. CONCLUSIONS

Phase 3 study was conducted to evaluate the efficacy and safety of the COVAXIN® vaccine. A total of 25800 participants were recruited, among these 67.2% were males and 32.8% were females. At-risk population, ages≥60 years (9.4%), participants (<60 Years) with co-morbid conditions (16.7%) were enrolled. COVID-19 seroprevalence was assessed among these 25800 participants at baseline and results reported that 34.3% of the participants were Seropositive.

All the participants were followed up for their safety, 70 SAEs were reported and among these 48 were resolved, 14 were ongoing and 8 deaths were reported. Among 25800 participants first 8000 enrolled participants AEs were recorded. A total of 655 AEs was reported and most of them were mild in severity. All the reported SAEs were not related to the vaccine.

COVAXIN® vaccine efficacy was assessed based on the 127 accrued COVID-19 cases and reported that the vaccine efficacy is 78%.

PARTICIPANT INFORMATION SHEET AND INFORMED CONSENT FORM

Protocol Title: An Event-Driven, Phase 3, Randomized, Double-blind, Placebo-controlled, Multicenter Study to Evaluate the Efficacy, Safety, Immunogenicity, and Lot-to-Lot consistency of BBV152, a Whole-virion Inactivated SARS-CoV-2 Vaccine in Adults ≥18 to Years of Age.

.Protocol Number	:	BBIL/BBV152-C/2020
Version & Date	:	Version: 4.0; Dated 18Nov 2020
Sponsor	:	Bharat Biotech International Limited, Hyderabad, Telangana –500078
Study Investigator	:	
Study Site and address	:	
Phone number(s)	:	
Screening Number	:	

This consent form may contain words that you do not understand. Please ask the study doctor or the study staff to explain any words or information that you do not clearly understand. You may take home an unsigned copy of this consent form to think about or discuss with family or friends before making thedecision.

A person who takes part in a research study is called a research or study subject. In this consent form "you" always refers to the research (study) subject.

SUMMARY

You are being asked to participate in a research study. The purpose of this consent form is to help you decide your participation in this study. To be in this study you must provide informed consent. Please read this form carefully. "Informed consent" includes:

- Reading this document or having it read to you,
- Having the study doctor or study staff explain the study to you,
- Asking questions about anything that is not clear, and
- You may take home an unsigned copy of this document if you require time to think about it and to talk to family or friends before you make the decision.

You should not agree to participate in this study until all of your questions are answered satisfactorily.

After reading and discussing the information in this consent form you should know:

- Why this study is being done
- What will happen during the research
- What vaccine or procedures will be used
- Any possible benefits to your participation
- The possible risks to your participation

If you take part in this study, you will be given a copy of this signed and dated consent form.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1111

PURPOSE OF THE STUDY

BBV152 is an investigational COVID-19 vaccine. This study is to know whether the vaccine (BBV152) is producing desired effect (efficacy), safety, and immune response (immunogenicity). The study will recruit individuals until the total number of 130 required subjects are accrued, with a virologically (RT-PCR test positive) confirmed symptomatic cases (i.e. persons who are positive for RT-PCR and are having symptoms of coronavirus disease (COVID-19). After reaching the target number of 130 COVID-19 cases, study will continue to assess only the safety until the study completion.

VOLUNTARY PARTICIPATION AND WITHDRAWAL

Your participation in this study is voluntary. You may decide not to participate in the study or you may leave the study at any time. Your decision will not cause any penalty or loss of benefits to which you are entitled.

The study doctor or the sponsor may stop your participation in this study at any time without your consent for any of the following reasons:

- It is in your best interest;
- You do not later consent to any future changes that may be made in the study plan; or
- For any other reason.

If you leave the study before the planned final visit, you may be asked by the study doctor to have some of the concluding procedures of the study so that we can record your general health condition and reasons for withdrawal.

STUDY PARTICIPATION AND PROCEDURES

A total of 25,800 subjects will be enrolled and randomly assigned equally to receive either BBV152 vaccine OR Placebo (i.e inert substance having no effect). You will be classified into three categories based on the sites where you have been enrolled. The study procedure will be different for each category.

Visit 1 Baseline (Month 0):
You will be checked whether you are eligible for the study based on the medical history and physical examination. If you are eligible (in good general health or stable pre-existing disease as per the discretion of the Principal investigator (doctor who is the main person responsible for conducting the study), blood sample (5 mL) and swab will be collected through nose (Nasopharyngeal swab) prior to vaccination. A study vaccine/placebo will be administered. Following vaccination, you will remain at the study site for at least 30 min of observation to record any immediate side effects.

Visit 2 (Month 1+2 days):
You will return to the OPD for vitals (Temperature, Pulse rate, BP, Respiratory rate, SpO2) physical examination (general and systemic examination), and specific symptoms for coronavirus disease (COVID-19). A study vaccine/placebo will be administered. Following vaccination, you

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1112

will remain at the study site for at least 30 min of observation to record any side effects.

An additional 5 mL blood and nasopharyngeal swabs will be collected from the participants who met the efficacy criteria for future research purpose.

You will be telephonically followed-up from 3rd month to 12 month for safety.

RANDOMIZATION

You will be randomly assigned (1:1 randomization) to receive two doses of either BBV152 vaccine or placebo so that you will have equal chance of receiving either vaccine or placebo. If you have any underlying disease (based on your medical history and physican examination before the administration of vaccine or placebo, you will be randomly assigned to receive either vaccine or placebo based on your disease condition.

DURATION OF THE STUDY

Your participation in the study will be approximately 12 months.

YOUR RESPONSIBILITIES IN THE STUDY

1. You should not participate in any other clinical trial during the study period.
2. Available for clinical follow-up throughout the study period via telephone contact as well as clinic visits.
3. Agree to keep a daily record of symptoms for the duration of the study

Precautions need to be taken for Protect yourself and others from the spread COVID-19:

- Regularly and thoroughly clean your hands with an alcohol-based hand rub or wash them with soap and water.
- Maintain at least 2 meter (6 feet) distance between yourself and others.
- Avoid going to crowded places.
- Avoid touching eyes, nose and mouth.
- Make sure you, and the people around you, follow good respiratory hygiene. This means covering your mouth and nose with your bent elbow or tissue when you cough or sneeze. Then dispose of the used tissue immediately and wash your hands.
- Stay home and self-isolate even with minor symptoms such as cough, headache, mild fever, until you recover. Have someone bring you supplies. If you need to leave your house, wear a mask to avoid infecting others.
- If you have a fever, cough and difficulty breathing, seek medical attention, but call by telephone in advance if possible and follow the directions of your local health authority.
- Keep up to date on the latest information from trusted sources, such as WHO or your local and national health authorities.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1113

WHAT ARE THE RISKS OR DISCOMFORTS OF TAKING PART?

POTENTIAL BENEFITS OF STUDY PARTICIPATION

The target study population for this study is adults with no known history of SARS-CoV-2 infection but whose locations or circumstances put them at high risk of COVID-19. The following benefits may accrue to participants.

- The BBV152 vaccine may be an effective vaccine against COVID-19.
- Contributing to the development of a vaccine against COVID-19, a current pandemic disease.

RISKS FROM STUDY PARTICIPATION

Vaccination with corona virus vaccine, BBV152 is the first ever vaccine used in clinical trials. Based on experiences with other similar vaccines you may experience the following symptoms after vaccination:

- Anaphylaxis
- Pain at injection site
- Redness at injection site
- Swelling at injection site
- Hardness at injection site
- Systemic symptoms like raised temperature or fever, chills, headache, , nausea, , vomiting, weakness, muscle pains and joint pains.

You may experience some pain and/or swelling of your arm from having blood drawn the number of times specified in the study procedures above. Drawing of blood can cause local bruising and reactions at the site of injection such as redness, swelling, and heat sensation.

Previously, a finding of enhanced respiratory disease cases was reported in animal studies SARS-CoV-1 (in 2008). Hence, there may be a concern of enhanced respiratory disease with any BBV152 or any other COVID-19 vaccine.

WHAT WILL HAPPEN IF SOME NEW INFORMATION ABOUT THE VACCINE IS IDENTIFIED

Sometimes during the course of a research project, if new information becomes available about the vaccine, then you will be informed in a timely manner, as it may be relevant. During the study, we may find new medical information about the subject. We will share this with you right away if it is important to your health. We may advise you to do other tests to check this new information.

WHAT ARE BENEFITS & COSTS/PAYMENT FOR PARTICIPATION?

Benefits

By participating in this study, you will learn about Coronavirus (COVID-19) disease and how to prevent it. Your participation in this study will help in generating information about the effect of this novel vaccine and lead the direction for further development of the vaccine so that it can become available to general public. If successful, the vaccine will be able to prevent Coronavirus infection or the symptoms caused by it and will benefit a larger population.

Costs/payment

You will not have to bear any cost for participating in this study nor will you receive any monetary benefit from participating in the study. However, you will be reimbursed towards cost incurred for travel or loss of daily wages by you of XX$ for your participation in the study. Even if you do not complete the study for any reason, you will be reimbursed for each visit which you have completed.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1114

WHAT ARE THE ALTERNATIVE TREATMENTS?

Currently, there are no vaccines commercially available to prevent SARS-COV-2 virus infection or COVID-19 disease.

MAY I WITHDRAW OR REVOKE (CANCEL) CONSENT?

You may withdraw or take away consent to use and disclose your health information at any time without giving any reason. If you withdraw consent, your will not be able to stay in this study further.

When you withdraw consent, no new health information will be gathered after that date. Information that has already been gathered and the samples collected may still be used in the research and given to others.

CONFIDENTIALITY

All the details related to you will be kept confidential. We will use a number instead of your name or other items that could identify you and your family personally on the record. The study doctor, sponsor/agents for the sponsor, regulatory authorities, and the ethics committee at the site may get this information.
Study information collected about you will be given to the sponsor. "Sponsor" means any persons or companies that are working for or with the sponsor, or owned by the sponsor.
It will also be given to the regulatory authorities of India. It may be given to governmental agencies in other countries where the vaccine may be considered for approval. Medical records which identify you and the consent form signed by you may be looked at for research or regulatory purposes.

You should also keep the data confidential and do not disclose any information that may reveal your confidentiality.

Why will this information be used and/or given to others?

- To conduct the research,
- To interpret and analyze the results, and
- To see if the research was done correctly

If the results of this study are made public, information that identifies you will not be used.

COMPENSATION FOR INJURY

If you decide to participate in the study, you will have to undergo all the study procedures explained above and provide the study related information to the study doctor and strictly follow the instructions of study doctors. In the event of any injury that are related to the clinical trial you will be provided free medical care as advised by the study doctor as long as required or till such time it is established that the injury is not related to the clinical trial, whichever is earlier.

In the event of an injury or death that is related to the clinical trial, M/s. Bharat Biotech International Limited, Hyderabad shall provide financial compensation as per applicable guidelines of the national regulatory authority.

You (your nominee or legal heir, as applicable) have the right to contact the Sponsor (Bharat

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1115

Biotech International Ltd. or its representative) for the purpose of making claims in the case of study related injury or death. Contact information for the Sponsor (or its representative) is available with your studydoctor.

As a liability / responsibility of the Sponsor, you will be covered by an insurance policy.

SOURCE OF FUNDING FOR THE STUDY

Bharat Biotech International Limited will fund for the study

WHO SHOULD I CALL IF I HAVE ANY QUESTIONS?

If you have any questions about the study or your participation in it or if you feel that you have had a research related injury or have a bad reaction to the study vaccine, you should contact Dr. _____principal investigator of this study at telephone number _____ or another studystaff.

If you have any questions about the rights you have while taking part in this study, call the Secretary of IEC, Mr/Mrs._____at telephonenumber_____.

Sign the participant informed consent form only if your questions have been answered to your satisfaction.

Questionnaire for Telephonic Follow-up for Suspected COVID-19:

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19			
Was the Participant followed up for COVID-19?	Yes ☐ No ☐	Date of Follow up:	D D M M Y Y Y Y

Time of Follow up: (HH:MM): _ _:_ _ (24 hrs format)

Criteria for swab collection:
1. Fever (for >24 hrs) 2. New or increased cough (for >24 hrs) 3. Shortness of breath/Difficulty in breathing (for >24 hrs)
4. Congestion/Runny Nose (for >48hrs)5. Sore throat (for >48hrs)6. Chills (for >48 hrs)7. Myalgia/Fatigue (for >48 hrs)
8. Headache (for >48 hrs) 9. New onset Anosmia/Ageusia (for >48 hrs) 10. Diarrhea (for >48 hrs) 11. Nausea/Vomiting

Were any of the criteria for swab collection met? ☐ Yes ☐ No

If Yes, Inform the PI, and plan for medical management. (Submit -> Notify PI, Sponsor, and CRO)

If yes, Collect the Nasopharyngeal swab, and sent to lab for analysis

Is the Swab submitted for RT-PCR test? ☐ Yes☐No

Swab collection Date (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _ Swab collection Time (HH:MM): _ _:_ _ (24 hrs format)

Results of RT-PCR test:☐Positive ☐Negative

Medical Management as Per PI: ☐ Home quarantine-based treatment ☐ Hospitalization

If No, specify the symptom(s) that did not meet the criteria or any other symptom(s):

Symptom I (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)
Symptom II (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)
Symptom III (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)

If the symptom(s) worsen(s), then re-assess for Suspected COVID-19 criteria. If the criteria are met, then, collect the Nasopharyngeal swab, and sent to lab for analysis.

If the participant is symptomatic, Assess for Severe COVID-19 criteria (If Yes, Please Tick if any as applicable)

1. Did the Participant has any symptoms Clinical signs at rest indicative of severe systemic illness? (respiratory rate >30/min, heart rate >125/min, SpO2<93%): **[Yes ☐ No ☐]**
2. Did the participant has Respiratory failure? (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO): **[Yes ☐ No ☐]**
3. Did the Participant have any symptoms general Evidence of shock? (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors: **[Yes ☐ No ☐]**
4.Did the Participant have any symptoms Significant acute renal, hepatic, or neurologic dysfunction?**[Yes ☐ No ☐]**
5.Did the Participant have Admission to an ICU?**[Yes ☐ No ☐]**
6.Mortality: **[Yes ☐ No ☐]**

If the participant is meet the Severe COVID-19 criteria, Assess for VAERD:

1. Oxygen saturation (SpO2) _____%
2. Need for oxygen therapy: [Yes ☐ No ☐]
3. Respiratory Rate: _____breaths/min
4. Need for ventilator support: [Yes ☐ No ☐]
5. Imaging test Report: _____
6. Blood test Report: _____
7. Any other clinical finding(s): _____

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19

Outcome of the Event:

Symptom I (Mention the symptom):
Outcome:☐ Recovered without any sequelae☐ Recovering ☐Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Symptom II (Mention the symptom):
Outcome:☐ Recoveredwithout any sequelae☐ Recovering ☐Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Symptom III (Mention the symptom):
Outcome:☐ Recoveredwithout any sequelae☐ Recovering ☐ Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Was the participant hospitalized?☐Yes ☐No

If yes,Date of Hospitalization: _ _/_ _ _/_ _ _ Time of Hospitalization (HH:MM): _ _:_ _ (24 hrs format)

Date of Hospitalization Discharge: _ _/_ _ _/_ _ _ _ Time of Discharge(HH:MM): _ _:_ _ (24 hrs format)

(Attach the Picture or PDF copy of the hospital record and discharge summary)

Note: If the participant was hospitalized, collect the hospital record including RT-PCT test report, and discharge summary. If the participant is hospitalized and not discharged, ensure whether RT-PCR test was done? If not, then request for RT-PCT test.

Was the participant admitted to ICU? ☐Yes ☐No

If yes, Date of ICU admission: _ _/_ _ _/_ _ _ _ Time of ICU admission (HH:MM): _ _:_ _ (24 hrs format)

Was the outcome fatal?☐Yes ☐No

Date of Death: _ _/_ _ _/_ _ _ _ Time of Death (HH:MM): _ _:_ _ (24 hrs format)

Date of Autopsy: _ _/_ _ _/_ _ _ _ Time of Autopsy (HH:MM): _ _:_ _ (24 hrs format)

Autopsy Report (Collected): Yes ☐No☐(Attach Picture or PDF copy)

Description of the event:

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19

Cara Ariadne, boa tarde.

Compartilho protocolo realizado para envio do relatório de validação do método de controle da proteína S1(antígeno) junto ao CBPF.

Informo que a potência foi concluída no sábado e eles estão encerrando a compilação para o relatório final. Informei a ANVISA que como ultrapassamos as 21h aqui, o relatório será protocolado amanhã no primeiro horário.

Gostaria de pedir a gentileza que consultem junto a ANVISA qual o prazo de análise que eles optaram por seguir, se 7 ou 30 dias.

Atenciosamente,

Emanuela Medrades

Prezada Emanuela Medrades,

Boa tarde!

A pedido do Coordenador-Geral de Logistica de Insumos Estratégicos para Saúde (CGLOG) venho por meio deste, *mui respeitosamente,* solicitar vossos préstimo quanto ao envio dos documentos elencados na Resolução da Diretoria Colegiada (RDC) 476, de 10 de março de 2021 para que esta coordenação possa solicitar junto a Agencia Nacional de Vigilância Sanitária (ANVISA) o pedido de concessão de excepcionalidade para a importação do objeto disposto no Contrato 52/2021.

Ficamos no aguardo.

À AGÊNCIA NACIONAL DE VIGILÂNCIA SANITÁRIA
QUESTIONAMENTOS REFERENTE PARTE CLÍNICA.

Hyderabad, 22 de maio de 2021

Ref.: Vacina Covid-19, Virion Inteiro Inativado (BBV152) / Submissão Prévia para Autorização de Uso Emergencial

A Precisa Comercialização de Medicamentos em atendimento ao estabelecido como estratégia de atuação da Agência nesse cenário de Pandemia apresenta através deste documento as suas respostas, considerações e compromissos com cada um dos itens a seguir.

A. QUESTIONAMENTOS SOBRE OS ESTUDOS CLÍNICOS:

1. Apresentar os protocolos, com descrição das respectivas emendas aprovadas, de todos os estudos clínicos conduzidos com a vacina.
   Resposta:

S No.	Title of the study	Status
1.	An adaptive, Seamless Phase 1, Followed by Phase 2 Randomized, Double-blind, Multicenter Study to evaluate the Safety, Reactogenicity, Tolerability and Immunogenicity of the Whole-Virion Inactivated SARS-CoV-2 Vaccine (BBV152) in Healthy Volunteers.	Study is ongoing.
2.	An adaptive, Seamless Phase 1, Followed by Phase 2 Randomized, Double-blind, Multicenter Study to evaluate the Safety, Reactogenicity, Tolerability and Immunogenicity of the Whole-Virion Inactivated SARS-CoV-2 Vaccine (BBV152) in Healthy Volunteers.	
3.	An Event-driven, Phase3, Randomized, Double-blind, Placebo-controlled, Multicenter Study to evaluate the Efficacy, Safety, Immunogenicity and Lot-to-Lot consistency of BBV152, a Whole-virion Inactivated SARS-CoV-2 Vaccine in Adults ≥18 Years of Age.	Study is ongoing.

Tabela 1 - Tabular listing of All Clinical Studies Módulo 5 CTD.

As Informações detalhadas de cada um dos estudos, como os protocolos solicitados estão no Módulo 5 do CTD peticionado no expediente nº 1214929212 na data de 30 de março 2021.

Todos os módulos do CTD estão sendo revisados e atualizados, e terão tais atualizações marcadas para melhor identificação da ANVISA.

Conforme informado pela BBIL, receberemos os documentos atualizados em 10 de junho de 2021.

2. Apresentar o relatório de Imunogenicidade atualizado e completo, contendo os resultados de todos os parâmetros imunológicos (anticorpos de ligação, neutralizantes e reposta celular) avaliados nos estudos clínicos. O relatório deve incluir resultados individuais tabelados para todos os participantes avaliados e apresentação dos resultados de avaliação de anticorpos em título geométrico médio e aumento de título de anticorpos. Todos os resultados disponíveis até momento, para todos os pontos de tempo de coleta, devem ser apresentados.
Resposta:

A avaliação de imunogenicidade foi planejada no subconjunto dos 600 participantes que foram recrutados nos centros de categoria 3. Todas as amostras de sangue desses participantes foram coletadas no Dia 0, Dia 28, Dia 56 e essas amostras estão sendo analisadas. Os dados de imunogenicidade em termos de títulos médios geométricos (GMTs) por anticorpo neutralizante, proteína S e título de ligação anti-IgG específico de RBD serão submetidos ao CDSCO (Agência Indiana) e estarão disponíveis em 15 de junho de 2021.

3. Apresentar os dados de segurança acumulados dos estudos de fase 1 e 2, com foco nos eventos adversos graves, eventos adversos de interesse especial e casos graves de Covid-19, acompanhados das respectivas narrativas detalhadas.
Resposta:

Dados disponíveis no CSR interino que será disponibilizado até 30 de junho de 2021, contendo também:

1. Relatório estatístico completo (25.800 participantes):
A. EA sério / não solicitado / sério até 2 meses após a dose-2;
B. Eficácia de 130 eventos sintomáticos;
C. Eficácia assintomática de 36 eventos;
D. Eficácia contra variantes preocupantes;

4. Apresentar os relatórios completos com resultados atualizados para os desfechos primários, secundários e exploratórios, dos estudos clínicos fase 1, 2 e 3, que incluam as informações conforme o definido no guia do ICH E 3, Estrutura e conteúdo dos relatórios de estudos clínicos.
Resposta:

Relatórios disponíveis apresentados no Módulo 5 do eCTD peticionado no expediente nº 1214929212 na data de 30 de março 2021.

5. Ressaltamos que os seguintes pontos referentes ao estudo fase 3, protocolo BBIL/BBV152-C/2020, devem ser claramente esclarecidos, justificados e/ou descritos:

   i. Data de corte dos dados para a avaliação interina de eficácia e segurança.
   Resposta:

   - 2° Report Interino com data de corte para eficácia em 08 de maio de 2021.

- Para monitoramento de segurança, todas os eventos adversos não graves foram apresentados para os primeiros 8.000 (oito mil) participantes recrutados inicialmente até o dia 01/03/2021, completando 42 dias de monitoramento.
- Todos as EAGs foram apresentadas até o dia 07 de abril de 2021.

ii. Descrição detalhada e justificativa da estratégia de randomização adotada.
Resposta:

Todo o plano de randomização foi evoluído e explicado no documento denominado "RESPONSES CLÍNICAL ANVISA QUERIES", através das respostas as questões 3.7 e justificado na resposta 3.13, além do Plano de Randomização constar no Anexo 9 do documento peticionado no expediente nº 1214929212 na data de 30 de março 2021.

iii. Descrição detalhada sobre a disposição dos participantes e representação em fluxograma para as populações de eficácia, Imunogenicidade e segurança no estudo fase 3, com uma contabilidade clara de todos os pacientes que foram incluídos e dos que foram retirados do estudo. O número de pacientes que foram randomizados, incluídos e retirados por semana do estudo deve ser fornecido, bem como os motivos para todas as interrupções pós-randomização, agrupados por tratamento e motivo principal (perda seguimento, evento adverso, não conformidades, etc.). Deve ser também fornecido o número de participantes triados para inclusão no estudo e uma análise das razões para a exclusão de participantes durante a triagem. Informar quantos participantes receberam uma dose da vacina e quantos receberam duas doses até o momento. Todos os dados sobre disposição de participantes solicitados devem ser apresentados também para cada categoria 1, 2 e 3 de participantes definida no estudo e para cada centro do estudo.
Resposta:

Essas informações foram solicitadas a IQVIA e serão enviadas para a ANVISA.

Compartilhamos o projeto de análise (Mock Shells) no Anexo 1 que detalham todas as tabelas, listas de segurança e números para o relatório final já no formato que será apresentado no CSR.

E a seguir o layout da disposição dos participantes e os dados que serão detalhados.

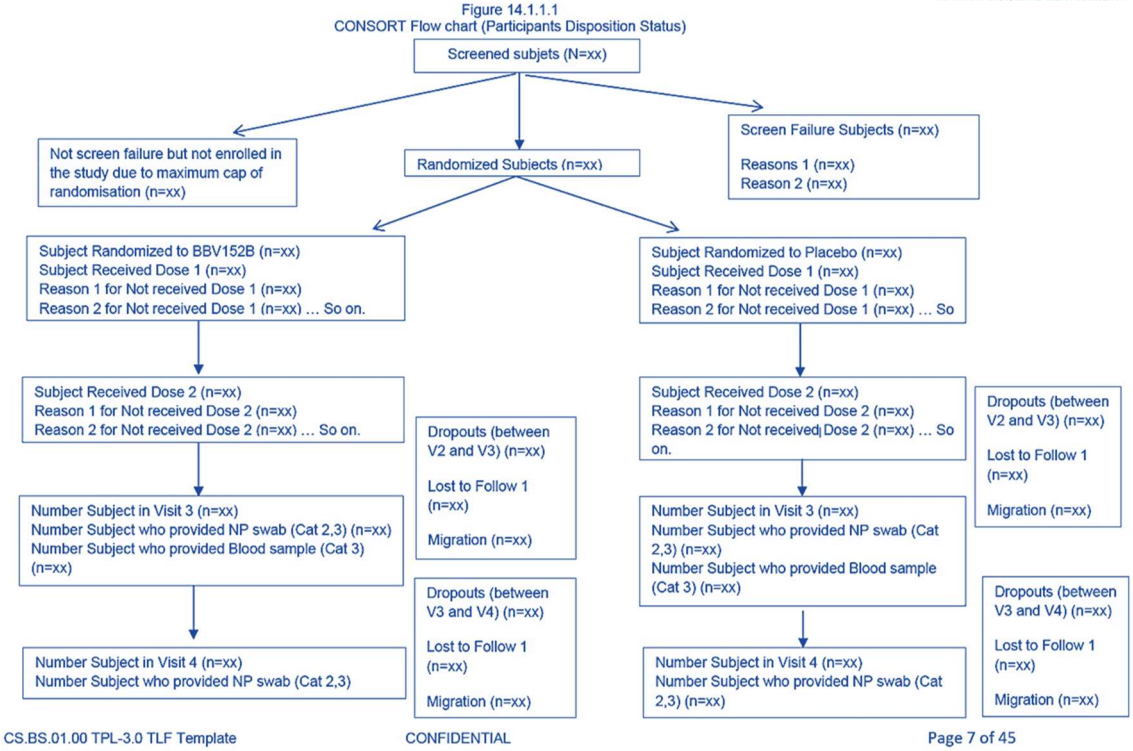

Figura 1 - Consort Flow Chart (Participants Disposition Status).

iv. Informar qual o número total de participantes que foram incluídos na avaliação interina de eficácia. Apresentar detalhamento sobre essa população considerada para análise interina de eficácia, descrevendo quantos tinham recebidos duas doses da vacina e dentre esses quantos tinham acompanhamento total de 42 dias no momento de corte de dados para a análise de eficácia. Informar também quantos participantes tinham recebido apenas uma dose da vacina no momento de corte de dados para análise interina. Descrever qual era a população considerada para análise por protocolo e por intenção de tratar.
Resposta:

Foram incluídos na segunda avaliação interina de eficácia do desfecho primário o total de 24.417 (vinte e quatro mil, quatrocentos e dezessete) participantes, todos já com a segunda dose da vacina/placebo há duas semanas, ou seja, total de 42 dias, sendo dividido conforme tabela abaixo.

Description	**Treatment Arm**		
	BBV152 (N = 12219)	**Placebo (N=12198)**	**Total (N =24417)**
First occurrence of Virologically confirmed (RT-PCR) n (%)	23 (0.188)	104 (0.853)	127 (0.520)
VE (%)	77.9		
98.78% CI	[60.8, 88.4]		
p value	<0.0001		

Tabela 2 – Segunda avaliação interina.

Para avaliação da eficácia não foram considerados os participantes com desvios de protocolo.

O SAP (Statistical Analisys Plan) com as descrições das populações PPs (per-protocol-set) e FAS (Full Analysis Set) está sendo inserido neste documento conforme a seguir.

Anexo 2. SAP BBV152.

v. Informar quantos casos Covid positivo ocorreram no braço vacinados e placebo conforme a categoria 1, 2 e 3, definida pela empresa.

S No.	Site	Category	Number of Cases
1	AIIMS, Delhi	Symptomatic	2
2	Director of Public Health – Chennai	Symptomatic	1

	Total	**25800**	**24454**	**23649**

Tabela 4 - Categoria e quantidade de participantes por site.

vi. Esclarecer, quanto ao acompanhamento dos participantes para detecção de casos suspeitos e confirmação de Covid, como o contato telefônico de 15 em 15 dias garantiu que os indivíduos sintomáticos tivessem amostras biológicas coletadas no intervalo de tempo adequado para confirmação virológica por PCR. A empresa deve apresentar justificativa, incluindo dados científicos e discussão sobre a diminuição da carga viral ao longo do tempo a partir do início dos sintomas e a sensibilidade comprovada do teste PCR.
Resposta:

Para os casos sintomáticos, todos os participantes foram acompanhados por telefone. O questionário de acompanhamento telefônico cobre todos os sintomas e, a critério dos PIs, todos os suspeitos foram chamados ao local e foram coletadas amostras para confirmação do quadro de doença COVID-19. Portanto, há menor chance de perder os casos sintomáticos.

Todas as chamadas telefônicas de 15 dias foram realizadas em todos os sites da categoria de forma dilatada.

É importante mencionar que visitas de doença não programadas foram incentivadas para os participantes até o dia 360. Todos os participantes receberam contatos da equipe de estudo na assinatura do consentimento informado e foram instruídos a contatar a equipe conforme necessário.

vii. Ainda quanto aos critérios para identificar um caso suspeito de COVID-19 sintomático a empresa informa que os participantes com qualquer sintoma de COVID-19 com duração de pelo menos 48 horas (exceto para febre e/ou sintomas respiratórios) visitarão a clínica ou serão visitados em casa por uma equipe médica qualificada dentro de 72 horas para coletar uma amostra de swab nasofaríngeo (NF) para teste de RT-PCR para SARS-CoV-2. Esclarecer como foi garantido que a coleta de swab NF para teste PCR foi feita em período de tempo máximo adequado após o início dos sintomas suspeitos, visto que foi estabelecido apenas um prazo mínimo a partir do início de sintomas, e não foi estabelecido também o necessário prazo máximo a partir do início de sintomas**.**
Resposta:

Para os casos sintomáticos, todos os participantes foram acompanhados por telefone. O questionário de acompanhamento telefônico cobre todos os sintomas e, a critério dos PIs, todos os suspeitos foram chamados ao local e foram coletadas amostras para confirmação do quadro de doença COVID-19. Portanto, há menor chance de perder os casos sintomáticos.

viii. Esclarecer se foram definidos critérios de avaliação dos casos Covid-19 positivos de acordo com gravidades leve, moderada e grave. Apresentar documentação que comprove qual escala de gravidade foi adotada, com descrição dos respectivos sintomas para definição de gravidade.
Resposta:

Os critérios de avaliação dos casos graves de Covid19, bem como identificação de sintomas de desfechos primários, foram realizados com base no *Development and Licensure of Vaccines to Prevent COVID-19 – Guidance for Industry* do FDA, conforme a seguir:

Identificação de sintomas para desfecho primário em acordo com o guia do FDA e também aplicado a outros estudos clínicos de vacinas contra SARS- CoV-2 como por exemplo no COV-02-IB (ClinicalTrials.gov NCT04456595).

- Fever or chills.
- Cough.
- Shortness of breath or difficulty breathing.
- Fatigue.
- Muscle or body aches.
- Headache.
- New loss of taste or smell
- Sore throat.
- Congestion or runny nose.
- Nausea or vomiting.
- Diarrhea.

Case Definition of symptomatic COVID-19 (Severe)	Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following symptoms: 1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%) 2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO) 3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors) 4. Significant acute renal, hepatic, or neurologic dysfunction 5. Admission to an ICU 6. Death

Tabela 5 - Definição de casos graves de Covid-19 conforme protocolo 3.0 BBV152.

E por fim, a definição de casos graves descritas nas páginas 13 e 14 do documento inserido no Anexo 3:

> As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:
>
> - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, SpO2 ≥ 93% on room air at seas level or PaO2/FiO2 > 300 mmHg).
> - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO) .
> - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors).
> - Significant acute renal, hepatic, or neurologic dysfunction.
> - Admission to an ICU.
> - Death.
>
> SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.
> The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

ix. Esclarecer se, no caso de um participante com suspeita de COVID-19 que teve um primeiro resultado negativo no teste de confirmação virológica por PCR, coletas adicionais de amostras clínicas foram estabelecidas como necessárias para novo teste por PCR em

diferentes períodos desde o início dos sintomas, para descarte definitivo de possibilidade de um caso positivo de COVID-19.
Resposta:

As coletas adicionais ou realizações de novo teste após RT-PCR negativo eram definidas pelo PI/site e justificada com racional caso fosse conduzido uma nova testagem de confirmação.

x. Esclarecer quais foram os critérios para permitir a administração da segunda dose da vacina nos participantes do estudo. Esclarecer se os participantes que foram positivos para COVID-19 entre a primeira e a segunda doses puderam receber a segunda dose.
Resposta:

Conforme descrito no protocolo BBV152 versão 3.0 nos critérios de elegibilidade, a revacinação não acontecerá nas seguintes condições:

- Pregnancy.
- History of virologically (RT-PCR) confirmed SARS-CoV-2 infection
- Anaphylactic reaction following administration of the investigational vaccine.

xi. Justificar a definição de casos graves de Covid no estudo fase 3, que está em desacordo com as definições harmonizadas internacionalmente e conforme o preconizado pela OMS.
Resposta:

Os critérios de avaliação dos casos graves de Covid19, bem como identificação de sintomas de desfechos primários, foram realizados com base no *Development and Licensure of Vaccines to Prevent COVID-19 – Guidance for Industry* do FDA, conforme a seguir:

Identificação de sintomas para desfecho primário em acordo com o guia do FDA e também aplicado a outros estudos clínicos de vacinas contra SARS- CoV-2 como por exemplo no COV-02-IB (ClinicalTrials.gov NCT04456595).

- Fever or chills.
- Cough.
- Shortness of breath or difficulty breathing.
- Fatigue.
- Muscle or body aches.
- Headache.
- New loss of taste or smell
- Sore throat.
- Congestion or runny nose.
- Nausea or vomiting.
- Diarrhea.

Case Definition of symptomatic COVID-19 (Severe)	Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following symptoms: 1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%) 2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO) 3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors) 4. Significant acute renal, hepatic, or neurologic dysfunction 5. Admission to an ICU 6. Death

Tabela 6 - Definição de casos graves de Covid-19 conforme protocolo 3.0 BBV152.

E por fim, a definição de casos graves descritas nas páginas 13 e 14 do documento inserido no Anexo 4:

> As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:
>
> - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, SpO2 ≥ 93% on room air at seas level or PaO2/FiO2 > 300 mmHg).
> - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO) .
> - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors).
> - Significant acute renal, hepatic, or neurologic dysfunction.
> - Admission to an ICU.
> - Death.
>
> SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.
> The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

xii. Apresentar os resultados de eficácia da vacina proposta para os subgrupos de acordo com a soro positividade dos participantes para SarsCov-2 em linha de base, no momento da inclusão no estudo.
Resposta:

Dado indisponível no momento. Dados de eficácia em participantes soropositivos serão apresentados em desfechos secundários.

A análise primária avalia a eficácia contra a primeira ocorrência de casos sintomáticos de COVID-19 confirmados virológicos (RT-PCR). Os participantes que forem soropositivos no início do estudo não entrarão na análise de eficácia primária. No entanto, como um desfecho secundário no protocolo, estamos avaliando a eficácia do BBV152 em indivíduos soropositivos. Isso foi feito para limitar o recrutamento de participantes soropositivos para o estudo. No entanto, ~ 35% da soro positividade foi observada.

xiii. Esclarecer como será avaliada a eficácia da vacina e perda de proteção em longo prazo, após a ocorrência de 130 casos Covid-19 no estudo, conforme planejado pelo desenvolvedor.
Resposta:

No estudo de Fase 3, um subgrupo (600) dos participantes será avaliado quanto à imunogenicidade em termos de GMT e soro conversão do título de anticorpos neutralizantes contra o vírus SARS-CoV-2 no Mês 0, Mês 1, Mês 2, Mês 3, Mês 6 , Mês 9 e mês 12.

xiv. Justificar a utilização do adjuvante Alum no grupo controle, visto que os eventos adversos causados pelo adjuvante terão análise prejudicada por não haver um controle sem o adjuvante Alum. Apresentar análise dos eventos adversos no grupo placebo e sua relação potencial com o adjuvante Alum.
Resposta:

Conforme mencionado anteriormente, o adjuvante IMDG possui um efeito imunomodulador independentemente de sua associação com um antígeno, e isso poderia prejudicar a análise da eficácia da Covaxin, ainda que este efeito não seja tão representativo.

Por isso, optou-se pela utilização do adjuvante Alum no grupo controle. Além do fato de também conter base de alumínio também presente no IMDG.

Description	Treatment Arm		
	BBV152 (N=4,061) n (%)	Placebo (N=3,804) n (%)	Total (N=7,865) n (%)
No of Subject with at least one Adverse Event	335 (8.25)	300 (7.89)	635 (8.07)
No of Subjects with at least one Local Solicited AE within 7 days after Day 0 Vaccination (1 event not resolved)	99 (2.44)	94 (2.47)	193 (2.45)
No of Subjects with at least one Local Solicited AE within 7 days after Day 28 Vaccination (1 event not resolved)	55 (1.35)	39 (1.03)	94 (1.20)
No of Subjects with at least one Systemic Solicited AE within 7 days after Day 0 Vaccination (1 event not resolved)	94 (2.31)	55 (1.45)	149 (1.89)
No of subjects with at least one Systemic Solicited AE within 7 days after Day 28 Vaccination (1 event not resolved)	30 (0.74)	23 (0.60)	53 (No 0.67)

No of subjects with at least one Unsolicited Adverse Events	50(1.23)	67(1.76)	117 (1.49)
All Ongoing Adverse Events	9 (0.22)	11 (0.29)	20 (0.25)
Severity			
Mild	317 (7.81)	288 (7.57)	605 (7.69)

Severe	9 (0.22)	7 (0.18)	16 (0.20)

Tabela 7 - Eventos adversos reportados para 7.865 participantes.

xv. Esclarecer como os participantes do estudo foram instruídos sobre como registrar os potenciais eventos adversos, solicitados ou não, locais e sistêmicos. Apresentar os formulários e/ou diários, eletrônicos ou não, que foram utilizados pelos participantes do estudo. Informar quais os equipamentos para permitir medição e temperatura, pressão e outras avaliações foram fornecidos aos participantes do estudo.
Resposta:

Anexo 5 diário do participante com as informações a serem preenchidas pelos participantes. E instruções. Cada participante recebeu 01 (um) termômetro junto ao ICF e Diário. Os instrumentos são para aferir os sinais solicitados tanto no diário, quanto nas ligações de acompanhamento ou nas ligações de suspeita de Covid19.

Anexo 6. Diário do participante;
Anexo 7. CRF.

xvi. Informar quais foram os eventos adversos solicitados definidos no estudo.
Resposta:

Solicited Local AEs	**Solicited Systemic AEs**
• Pain at the injection site; • Swelling at the injection site; • Induration (hardness) at the injection site; • Erythema (redness) at the injection site	• Fever; • Chills; • Headache; • Nausea; • Vomiting; • Fatigue; • Myalgia; • Arthralgia

Tabela 8 - Eventos adversos relacionados ao estudo.

Na tabela a seguir, a classificação desses eventos solicitados.

Reaction	**Grade 0**	**Grade 1**	**Grade 2**	**Grade 3**	**Grade 4**
Injection site pain	None	Does not interfere with the activity	Repeated use of over-the counter pain reliever > 24 hours or	Any use of prescription pain reliever or prevents	Requires emergency room visit or hospitalization

			interferes with the activity	daily activity	
Injection site erythema (redness) < 25 mm/ < 2.5 cm 25 in diameter	< 25 mm/ < 2.5 cm	25 - 50 mm/ 2.5 - 5 cm	51 - 100 mm/ 5.1 - 10 cm	> 100 mm/ > 10 cm	Necrosis or exfoliative dermatitis
Injection site swelling/induration (hardness)	< 25 mm/ < 2.5 cm in diameter	25 - 50 mm/ 2.5 - 5 cm in diameter	51 - 100 mm/ 5.1 - 10 cm in diameter	> 100 mm/ > 10 cm in diameter	Necrosis
Fever (oral)	< 38.0°C or <100.4°F	38.0 – 38.4°C or 100.4 – 101.1°F	38.5 – 38.9° C or 101.2 – 102.0°F	39.0 – 40.0°C or 102.1 – 104.0°F	< 40.0°C or <104.0°F
Chills	None	No interference with activity	Some interference with activity not requiring medical intervention	Prevents daily activity and requires medical	Requires emergency room visit or hospitalization
Headache	None	No interference with activity	Repeated use of over-the-counter pain reliever > 24 hours or some interference with activity	Significant; any use of prescription pain reliever or prevents daily activity	Requires emergency room visit or hospitalization
Nausea	None	No interference with activity or 1-2 episodes/ 24 hours	Some interference with activity or > 2 episodes/24 hours	Prevents daily activity, requires outpatient intravenous hydration	Requires emergency room visit or hospitalization for hypotensive shock
Vomiting	None	No interference with activity or 1-2 episodes/ 24 hours	Some interference with activity or > 2 episodes/24 hours	Prevents daily activity, requires outpatient intravenous hydration	Requires emergency room visit or hospitalization for hypotensive shock
Fatigue	None	No interference with activity	Some interference with activity	Significant;	Requires

				prevents daily activity	emergency room visit or hospitalization
Myalgia (muscle aches all over the body)	None	No interference with activity	Some interference with activity	Significant; prevents daily activity	Requires emergency room visit or hospitalization
Arthralgia (joint aches in several joints)	None	No interference with activity	Some interference with activity	Significant; prevents daily activity	Requires emergency room visit or hospitalization

Tabela 9 - Classificação dos eventos solicitados.

Reference: Brighton classification case definition or common terminology criteria for adverse events (CTCAE) version 5.0.

xvii. Apresentar as narrativas completas de eventos adversos graves, incluindo óbitos, e eventos adversos de interesse especial. As narrativas devem incluir a natureza e intensidade do evento, idade e sexo do paciente; condição clínica geral do paciente, o curso clínico que levou ao evento e opinião do investigador e do patrocinador sobre causalidade. Deve ser informado também as doenças concomitantes/anteriores relevantes com detalhes de ocorrência/duração e medicação concomitante/anterior com detalhes da dosagem. A empresa também deve fornecer a avaliação de causalidade em relação a esses eventos.
Resposta:

Apresentando os casos de óbitos no expediente nº 2032599211 na data de 26 de maio de 2021.

Anexo 8. – Com o mesmo tratamento para as outras EAGs.

xviii. Informar o número de lote, data de fabricação e extensão da utilização de cada lote utilizado nos estudos clínicos.
Resposta:

NÚMERO DE LOTE	TAMANHO DO LOTE	DATA	FINALIDADE

1 General Programming Note:

- N =number of participants in the relevant population per cohort and n= The number of participants, % = n/N *100
- m= Count of Events (One participant may be counted more than once)
- For Decimal point of statistics of respective parameter please use the SAP Section Appendix 1
- For individual TLFs Footnotes must be left justified except “page x of y” (where Y is the total number of pages for the individual TLF output) which must be right justified.
- In compiled TLFs for the page identification in the format Page X of Y (where Y is the total number of pages for the TLF) should appear in row 2, In header which must be right justified.
- All TLFs will be based on SDTM/ADaM or Derived datasets and the SDTM/ADaM or Derived dataset used to create respective TLFs will be provided in the footnote “Source” as appropriate.

2 General Notes:

- Treatment: BBV152B and Placebo. In BBV152B: BBV152B Lot 1, BBV152B Lot 2, BBV152B Lot 3.
- The section headings/TOC provided in Mock Shell document is only for the mock shell for reference purpose and actual mock shell for respective TLFs Output will start form the “table number, table title and population information for example (Table 14.1.1.1 Participants Disposition Status by Treatment Group (Enrolled Analysis Set)) column.

14.2 Efficacy Endpoints

14.2.1 Primary Efficacy Endpoints

Table 14.2.1.1
Primary Endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19
(Per Protocol Set)

	BBV152B (N=XX)	Placebo (N=XX)	Total (N=XX)
First occurrence of virologically confirmed n (%)	xx (xx.x)	xx (xx.x)	xx (xx.x)
VE Point Estimate	xx.xx		
95.006% CI	[xx.xx, xx.xx]		

Note: CI=Confidence Interval. VE= vaccine efficacy.
The estimate VE is given in terms of parameter P (i.e. Proportion of cases in the vaccine group) and the ratio h = Fp/Fv, which is expected to be very close to 1, since R = hP / (1-P) and thus VE = 1 – hP / (1-P). A two-sided confidence interval (CI) around the estimated VE will be obtained by converting an exact CI around the estimated probability parameter P, using the observed h = Fp/Fv, to a CI for VE. If (PL, PU) is the CI around P, the CI for VE will be [1 – hPU/(1-PU), 1 – hPL/(1-PL)].
Fv and Fp are the corresponding total lengths of follow-up in years in the two groups from Day 42, with follow-up in years defined as a follow-up in days divided by 365.25. We have considered ratio of Fp/Fv=1 for this analysis.
N = number of participants in the relevant population,
n = Number of participants with First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19. (The symptomatic COVID-19 cases include any participant who meets the Case Definitions for symptomatic endpoint or severe symptomatic COVID-19)., % = n/N *100

1. Overview

1.1 Introduction

The purpose of this Statistical Analysis Plan (SAP) is to provide details of the statistical analyses that have been outlined within the Protocol Version 4.0 for BBIL/BBV152-C/2020, dated 11/03/2020. The scope of this plan includes the final analysis, which will be executed by the Biostatistics department unless otherwise specified.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1201

2. Trial objectives

The following objectives are those stated in the protocol.

2.1 Primary Objectives (Efficacy)

- To evaluate the efficacy of BBV152 to prevent symptomatic COVID-19.

2.2 Secondary Objectives (Efficacy)

- To evaluate the efficacy of BBV152 to prevent COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint.
- To evaluate the efficacy of BBV152 to prevent severe COVID-19.
- To evaluate the efficacy of BBV152 to prevent any severity COVID-19 by age.
- To evaluate the efficacy of BBV152 to prevent asymptomatic COVID-19.
- To evaluate the efficacy of BBV152 to prevent COVID-19 regardless of symptomatology or severity.
- To evaluate the efficacy of BBV152 to prevent COVID-19 related deaths.
- To evaluate the efficacy of BBV152 to prevent symptomatic COVID-19, regardless of the previous infection.

2.3 Secondary Objectives (Safety)

- To assess the safety of BBV152

2.4 Secondary Objectives (Immunogenicity)

- To evaluate the immunogenicity of BBV152

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1202

3. Endpoints

3.1 Primary Endpoint

- First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19. (The symptomatic COVID-19 cases include any participant who meets the Case Definitions for Symptomatic Endpoint or Severe Symptomatic COVID-19).
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].

3.2 Secondary Endpoints (Efficacy)

- First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed COVID-19 cases of any severity occurring among participants 18 through 59 years of age and ≥60 years of age.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.
  [Time Frame: Month 2 to Month 12].
- Virologically confirmed COVID-19 asymptomatic and symptomatic cases occurring from two weeks after the second vaccination. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- The number of participants with virologically confirmed COVID-19 deaths.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- The number of participants with virologically confirmed symptomatic COVID-19. Includes cases that were seropositive at baseline. Excludes cases in which vaccination was incomplete.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1203

3.3 Secondary Endpoints (Safety)

- Serious Adverse Events (SAEs) occurring at any time in all study participants; SAE rates will be analyzed when the primary efficacy endpoint (130 cases) is reached and at the study end.
  [Time Frame: Throughout the study period].
- Solicited local and systemic adverse events (AEs).
  [Time Frame: within 7 days post each vaccination]
- Unsolicited adverse events (AEs) occurring between the vaccination and 28 days after the final vaccination, among all study participants.
  [Time Frame: Within 28 days post vaccination]
- Immediate adverse events with 30 minutes of vaccination
  [Time Frame: within 30 minutes post each vaccination]
- Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period.
- The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial.
  [Time Frame: Throughout the study period]
- Adverse Event of Special Interest (AESI).
  [Time Frame: Throughout the study period]

3.4 Secondary Endpoints (Immunogenicity)

- Geometric Mean Titer (GMT) of SARS-CoV-2 Specific Neutralizing Antibody (nAb)
  [Time Frame: Month 0 to Month 12]
- Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Neutralizing Antibody (nAb) at Month.
  [Time Frame: Month 0 to Month 12]
- Geometric Mean Titer (GMT) of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb).
  [Time Frame: Month 0 to Month 12]
- Lot-to-Lot consistency will be assessed based on the neutralizing titer of the three consistent lots used in the trial.
  [Time Frame: Month 0 to Month 2]

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1204

4. Trial design

This is a randomized, double-blind, phase 3 study to evaluate the Efficacy, Safety, and Immunogenicity of BBV152, a Whole-Virion Inactivated SARS-CoV-2 Vaccine in Volunteers aged 18 years and above.

A total of 25,800 subjects will be enrolled and randomized in a 1:1 ratio to receive BBV152 vaccine and placebo. All participants will be assessed for efficacy and safety endpoints and provide a NP swab and blood sample before the first dose of IP. The NP swab and blood collected will be subject to RT-PCR and Anti-SARS-CoV-2 IgG antibodies. The results of this will not affect enrolment of the participant. Participants who are found to be positive for either RT-PCR Or Anti-SARS-CoV-2 IgG antibodies will be excluded from the primary efficacy analysis.

In addition, sites will be segregated based on the study objectivise:

Category 1 (Symptomatic): In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15 ±2 -day intervals.

Category 2 (Symptomatic/Asymptomatic): In addition to administering the IP and telephonic follow-up visits scheduled to detect suspect symptomatic COVID-19 infections, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

Category 3 (Symptomatic/Asymptomatic+Immunogenicity): In addition to administering the IP and telephonic follow-up visits scheduled to detect suspect symptomatic COVID-19 infections, repeated NP swabs for asymptomatic, and a series of blood samples will be collected for analyzing serum for immunological assessments.

Efficacy assessments will include surveillance for COVID-19 with RT-PCR confirmation of SARS-CoV-2 infection after the first and second dose of IP. As noted above, this is a case (event) driven study: if the prespecified criterion for early efficacy is met at the time of interim analysis (IA) and the Data and Safety Monitoring Board (DSMB) recommends stopping for demonstrated efficacy, or efficacy is established by the planned primary analysis after 130 primary endpoint events have accrued, a study

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1205

report describing the efficacy and safety of BBV152 will be prepared based on the data available at that time. Five millilitre of blood will be collected from all the RT-PCR confirmed symptomatic COVID-19 participants.

If success criteria are met either at the time of the interim analyses or when the total number of cases toward the primary endpoint has accrued, participants will continue to be followed in a blinded fashion until Month 12, to enable assessment of long-term safety (all category sites) and immunogenicity (only for category 3 [immunogenicity] sites).

The design and focus of the study are dependent on the current COVID-19 pandemic, requiring identification of participant candidates at high risk of SARS-CoV-2 infection. The Sponsor may adjust the size of the study or duration of follow-up based on the blinded review of the total number of cases of COVID-19 (based on appropriate quantum of symptomatic or severe cases) accrued during the study, in addition to estimated percentages of study participants with immunologic evidence of SARS-CoV-2 infection at baseline.

If achieving 130 cases of COVID-19 is manifestly unattainable based on plausible expansions of sample size or increased follow-up, an analysis of blinded data may be performed and change of the study design such as changing the required lower bound for the primary analysis may be proposed.

4.1 Blinding

The placebo is identical to the vaccine. Sufficient measures will be taken to assure that blinding of participants and evaluation staff is maintained. Study product assignments will be accessible to the data coordinating centre staff and others who are required to know this information to ensure proper trial conduct. The DSMB members may also be unblinded to treatment assignment as required to review vaccine safety and efficacy. Emergency unblinding decisions are expected to be rare and justified only when that information is needed for the future clinical management of that participant.

If in the opinion of the investigator, the event the health and safety of the participant will benefit from knowing the treatment code, efforts will be made to contact the medical monitor as long as Subject safety is not at imminent risk. If the Subject is at imminent

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1206

risk, the investigator should have the ability to unblind although should notify the Medical Monitor (MM) and Sponsor as soon as possible thereafter.

4.2 Planned number of sites.

Multicentre study

4.3 Planned number of subjects.

A total sample size of 25,800 volunteers, ages ≥18 years and above will receive selected formulation of BBV152 vaccine and placebo in a 1:1 ratio. Recruitment should support the generalizability of results, including enrolment of healthy participants as well as participants at risk for severe COVID-19, such as persons ≥60 years of age and those individuals with stable co-morbid diseases such as hypertension, diabetes, obesity, chronic kidney disease, chronic obstructive pulmonary disease (COPD), and chronic heart disease.

The study is designed to obtain a two-sided 95% CI for vaccine efficacy with a lower bound ≥ 30%. (A slight adjustment, to a 95.3% CI, will be necessary at the final analysis if there is an interim analysis with possible early stopping for demonstrated efficacy.) For assumed true efficacy of 60%, the required number of cases for 85% power is 130. The total number of participants required depends on the assumed incidence during the follow-up period. We assume an average incidence among placebo recipients of 1% during follow-up beginning 14 days after the second dose; thus, the expected number of participants required to accrue 130 cases is approximately 18,572. Allowing for baseline seropositivity and RT-PCR confirmed COVID-19 cases as exclusions (20%) and other losses (loss to follow-up, etc.) of 10%, the number becomes 25,794. It is planned to randomize approximately 25,800 study participants.

The assumption of Vaccine Efficacy of 60% is for sample size estimation only. The intended success criteria for vaccine efficacy are 50% (in agreement with the minimum requirement given in the WHO Target Product Profile). Based on appropriate accrual of symptomatic or severe cases, the Sponsor may increase the sample size or increase the follow-up time. These changes will be reflected in future amendments. The null hypothesis Vaccine Efficacy value may be adaptively modified to below 30% during the trial, based on a lower-than-projected COVID-19 attack rate or case accrual rate, with collaborative decision-making by DSMB. Starting with a 30% null hypothesis

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1207

VE value rather than a lower value helps assure that vaccine efficacy is estimated with sufficient precision to support decision-making about a vaccine, which may include regulatory approval and acceptance of the vaccine for manufacturing and widespread use

4.4 Treatment Intervention and Dose

Whole-Virion Inactivated SARS-CoV-2 vaccine (BBV152) will be administered as two-dose intramuscular injection 28 days apart.

BBV152B:

Note: BBV152B (Based on Phase 1 trial interim report) The dose selected for this study (6 µg of Antigen & Adjuvant-IMDG) is based on the assessment of available safety and immunogenicity data from Phase 1 studies (NCT04471519) and animal studies infusion

- Dosage Form and Route of Administration: COVID-19 Vaccine (BBV152), is a liquid 0.5 mL Vero cell-derived inactivated vaccine containing NLT 6µg and administered as a two-dose regimen intramuscularly (IM) 4 weeks apart.
- Dose Regimen: Vaccine is administered as two doses, on Day 0 and Day 28.

4.5 Success Criteria for Final Anlaysis

Success will be defined by a two-sided 95% CI for vaccine efficacy (adjusted as necessary for interim monitoring) with a lower bound ≥ 30% with point estimate >50%. The International Coalition of Medicines Regulatory Authorities noted that “a specific

Active Ingredient	Quantity
Whole Virion, Inactivated Corona Virus Antigen (Strain: NIV-2020-770)	BBV152B
	6µg
Inactive Ingredients	
Aluminium Hydroxide Gel equivalent to Al^{+++}	250 mcg
TLR7/8 Agonist	15 mcg
2-Phenoxyethanol (2PE) I.P.	2.5 mg
Phosphate Buffered Saline	q.s. to 0.5 mL

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1208

numeric value to be used for the lower bound and vaccine efficacy point estimate was not agreed upon at this stage". It was also reflected that efficacy estimates crossing a certain pre-specified lower bound for efficacy, due to factors such as epidemiological evolution of the pandemic, would not preclude the possibility of a positive benefit-risk conclusion if there also were other data supportive of efficacy. will be more than 250 ml due to addition of the drug solution to 250 mL of 0.9% Sodium Chloride solution.

4.6 Premature Discontinuation of The Trial

The Premature termination or temporary suspension of the study may be done if there is sufficient reasonable cause. Written notification, documenting the reason for study suspension or termination, will be provided by the suspending or terminating party. If the study is prematurely terminated or suspended, the Investigator will promptly inform the Ethics Committee (EC) and will provide the reason(s) for the termination or suspension. Circumstances that may warrant termination or suspension include, but are not limited to:

- Determination of unexpected significant, and unacceptable risk to subjects.
- Due to protocol non-compliance and/or any other reason, data generated is insufficient and is non-evaluable.
- Plans to modify, suspend, or discontinue the development of the investigational vaccine.

If the study is suspended it may resume once concerns about safety, protocol compliance, data quality, etc. are addressed and satisfy the Sponsor, IEC, and/or regulatory authority.

4.7 Early Discontinuation from of The Study

Failure of the participants to comply with the requirements of the protocol will lead to early discontinuation from the study. The discontinuation from the study will be considered by the investigator if it is in the participants or legally acceptable representative's best interest. A participants whose data is complete for all the observations is considered to have completed the study.

It will be specified on the study conclusion page of the CRF as to which of the following reasons were responsible for the withdrawal of the participants from the study.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1209

- Adverse Event/Serious Adverse Event

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1213

5. Changes/deviations from the planned analysis

The trial has accrued confirmed symptomatic COVID-19 cases faster than expected. Hence, the second interim analysis will be conducted on more than the planned 87 participants with confirmed symptomatic COVID-19. The IWRS system was used for randomization of the participant during the visit. As there are several data entry activities ongoing across all sites in the eDC, the IWRS is considered to have all participants with the intended allocation. Hence, for the purpose of the interim analysis, the unblinded statistician will consider the IWRS dataset. All available participants with confirmed symptomatic COVID-19 cases will be included in the second interim analysis, using IWRS source data instead of eDC data and assuming the ratio of total length of follow-up (placebo to vaccine) is 1. However, the final analysis will be performed based on source data from the eDC on at least 130 confirmed symptomatic COVID-19 cases and the observed ratio Fp/Fv of follow-up time in the placebo group to follow-up time in the vaccine group.

Any deviation in implementing the original statistical plan will be described and justified in the final clinical study report.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1214

6. Surveillance and case identification

In addition, different procedures will be followed to identify potential cases based upon the site. The three categories of procedures are as follows:

6.1 Category 1 (Symptomatic):

In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15-day intervals.

6.2 Category 2 (Symptomatic/Asymptomatic):

In addition to administering the IP and periodically detecting suspect symptomatic COVID-19 infections, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

6.3 Category 3 (Symptomatic/Asymptomatic+Immunogenicity):

In addition to administering the IP and periodically detecting suspect symptomatic COVID-19 infections, repeated NP swabs for asymptomatic, a series of blood samples will be collected for analyzing serum for immunological assessments.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1215

7. Analysis populations

Agreement and authorization of participants included/excluded from each analysis population will be reached prior to Interim/final database hard lock. IQVIA and Sponsor will supply a list of all participants to be excluded from the relevant analysis populations, including the reason(s) for exclusion from the analysis populations.

The serum will be collected on Day 0, before vaccination, for assessment of seroprevalence (presence of binding antibody titers to COVID-19) at baseline. At a later time, point, once these samples are analyzed, participants who are positive at baseline will be excluded from immunogenicity and efficacy analyses, but they will continue to be followed up for safety outcomes.

7.1 Enrolled Population

All participants who sign the Informed consent form.

7.2 Randomization Analysis Set

All randomized participants classified according to the study product (vaccine or placebo) to which they were randomized.

7.3 Full Analysis Set (FAS)

All randomized participants who received at least one dose of IP and had no immunologic evidence of prior COVID-19 (i.e, negative against SARS-CoV-2 antibodies) at Visit 1 before the first dose of IP. Participants will be analysed according to the study product (vaccine or placebo) received.

7.4 Per-protocol (PP) Set

All participants in the FAS who received planned doses of IP per schedule, seronegative for SARS-CoV-2 Antibody by ELISA at baseline, and have no major protocol deviations, as determined, and documented by the Sponsor. Participants will be analysed according to the study product (vaccine or placebo) received.

7.5 Immunogenicity Analysis Subset

Designated participants at study sites included in the immunogenicity study (Category 3 and Category 4) who had received both doses of IP.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1216

7.6 Safety Analysis Set (SAS)

The Safety Set consists of all randomized participants who received at least one dose of IP and contributed any solicited AE information, classified according to the study product received.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1217

8. General Considerations

8.1 Visit and date Conventions.

Visit day will be calculated from the reference start date which will be used to present start/stop day of assessments and events. The reference start date is defined as the date of first study drug administration.

The following conventions will be used for visit references:

- $Visit\ day = (date\ of\ event - reference\ start\ date)$ +1
- $Visit\ week = \frac{visit\ day}{7},\ rounding\ up\ to\ next\ whole\ number$
- $Visit\ month = \frac{visit\ day}{30.44},\ rounding\ up\ to\ next\ whole\ number$

8.2 Visit Windows

Inclusion within the visit window should be based on the actual date and not the intended date of the visit. The window for the visits following baseline (including unscheduled visits) will be constructed in such a way that the upper limit of the interval falls half way between the two visits

For laboratory and non-laboratory parameters, unless otherwise specified, if a patient has more than one measurement included within a window, the assessment closest to the target day will be used. In case of ties between observations located on different sides of the target day, the earlier assessment will be used. In case of ties located on the same side of the target day (i.e. more than one value for the same day but different time), the value with the earlier entry date/time will be used

Table - Visit Windows

Assessment	Visit	Month	Target Day	Day Range
Baseline	**Visit 1**	**Month 0**	**<30**	
Month 1	**Visit 2**	**Month 1**	**30**	**30-32**
Month 2	**Visit 3**	**Month 2**	**60**	**53-67**

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1218

Month 3	**Visit 4**	**Month 3**	**90**	**83-97**
Month 4	**Visit 5**	**Month 4**	**120**	**113-127**
Month 5	**Visit 6**	**Month 5**	**150**	**143-158**
Month 6	**Visit 7**	**Month 6**	**180**	**173-187**
Month 7	**Visit 8**	**Month 7**	**210**	**213-217**
Month 8	**Visit 9**	**Month 8**	**240**	**233-247**
Month 9	**Visit 10**	**Month 9**	**270**	**263-277**
Month 10	**Visit 11**	**Month 10**	**300**	**193-307**
Month 11	**Visit 12**	**Month 11**	**333**	**323-337**
Month 12	**Visit 13**	**Month 12**	**360**	**353-367**
Unscheduled Illness Visit:	**Visit 999**	**US**		**<367**

8.3 Baseline

Baseline is the closest recorded measurement before the administration of the first dose of IP. If the measurement is done on the same day as the first dose and the exact measurement time relative to the first dose is unknown, it will be assumed the measurement is done before the administration of the first dose of IP. If a participants does not receive IP, baseline is the closest recorded measurement on or before the enrolment date.

8.4 End of Study

The end of study date is defined as the date when the last participants is assessed or receives an intervention for evaluation in the study (i.e., last Subject last visit), following any additional parts in the study (e.g., long-term follow-up), as applicable.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1219

8.5 Study Day 1

The first day of study vaccine administration

8.6 Study Dates

Informed Consent (IC) Date

The date on which the study informed consent form is signed.

Screening Date

The screening date is the informed consent (IC) date.

Enrolment Date

The date on which the investigator confirms that the participants has met all eligibility criteria and the enrolment in the study.

End of Study Date

The date recorded on the End of Study eCRF

8.7 Stratifications and Subgroups

In this study primarily BBV152 will be compared with Placebo. For analysis purposes, trial participants may be sub-classified into the following three stratification levels, The three Stratifications of study are as follows

- >=60 years of age with expected ratios of 30-40%
- <60 Year of age and a HCP with expected ratios of upto 5%
- <60 with co-morbid condition with expected ratios of 55-65%

Immunogenicity Subset

Designated participants at study sites included in the immunogenicity study who had a valid immunogenicity test result before the first dose of IP and at least 1 valid result after the first dose of IP, classified according to the study product received.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1220

8.8 Interim analysis

Formal interim analyses are planned when at least approximately 1/3 (43 cases) and 2/3 (87 cases) of the target number of 130 participants with confirmed symptomatic COVID-19 have been accrued, to determine 1) whether vaccine efficacy (VE) has been demonstrated and, if not, 2) whether the sample size and/or length of follow-up should be increased.

The analysis for demonstrated efficacy, with possible early stopping, will test the null hypothesis that VE ≤ 30% using the Lan-DeMets O'Brien-Fleming-like α-spending function framework to define the boundary to be used as a guideline. For 43 of 130 cases at the first interim analysis and 87 of 130 cases at the second interim analysis, the one-sided α for determination of efficacy will be 0.0001 and 0.0061, respectively. This is equivalent to requiring a two-sided 99.98% confidence interval (CI) for VE with lower bound ≥ 30% at the first interim analysis and a two-sided 98.78% CI for VE with lower bound ≥ 30% at the second interim analysis. For interim analyses at exactly 43 and 87 of a total of 130 cases, the test for efficacy ≥ 30% at the final analysis would be done at the one-sided 0.0231 significance level (i.e., the CI for VE would be a two-sided 95.38% CI). If the interim analyses are done at different numbers of cases than 43 and 87, the same boundaries as indicated above will be used, and the test and CI at the final analysis will be adjusted accordingly. The use of these relatively stringent criteria for demonstrated efficacy at the interim analyses means that only a slight correction in the significance level and CI will be necessary at the final analysis if the study is not stopped early.

If needed, the analysis for possible increase of sample size will be done on unblinded data using the method of Chen, DeMets, and Lan. It is planned to increase sample size only for conditional power ≥ 50%, assuming the true VE is as observed in the interim data, or for an unexpectedly low COVID-19 event rate.

In addition to the analyses described above, if efficacy is not demonstrated at the second interim analysis, an analysis for possible early stopping for futility (low efficacy or negative efficacy), using conditional power calculations, will be done. The DSMB will be asked to consider a recommendation to stop the study for futility if conditional power ≤ 20% to show any significant VE (i.e., a two-sided 95% CI for VE with lower bound > 0), assuming true VE = 60%.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1221

Finally, additional interim analyses will be conducted on all severe PCR-confirmed COVID-19 cases occurring since vaccination, if the number of such cases is at least 5. The purpose of these analyses is to identify possible vaccine-associated enhanced disease (VAED) – i.e., severe disease occurring due to the vaccine. The guideline for possible study pausing for these analyses, based on a comparison of proportions of severe cases in vaccine and placebo recipients, will be a one-sided p-value ≤ 0.05 in the direction of a higher proportion of severe cases in vaccine recipients. The test may be done by a z-test of proportions or, for a number of severe cases < 5 in either the vaccine or placebo group, a one-sided Fisher exact test. For example, assuming equal numbers of participants in the two groups, a case split of 5 vaccine: 0 placebo would meet the guideline, by a one-sided Fisher exact test. If the guideline is met, the DSMB may recommend that the study be paused and a thorough review of all severe cases be conducted by the DSMB. After a pause, the study may continue if agreed to by the DSMB and the FDA. These analyses will be done at the time of the interim and final analyses of vaccine efficacy, as long as at least 5 severe cases have occurred, or at other times at the discretion of the DSMB, depending on the observed number of severe cases.

Review of interim efficacy and safety data and recommendations based on the data will be within the purview of the external DSMB. The DSMB may recommend stopping the study because of concerns for participant safety at the time of a formal interim analysis or at any other time it reviews safety data.

The below mentioned analyses will be presented in the interim analysis 2 using PP population set; in most of these analyses, two-sided 95% CIs for VE will be presented. The exception is the analysis of virologically confirmed severe cases of COVID-19, in which a two-sided 90% CI will be presented, and the null hypothesis that the proportion of severe cases in placebo recipients is equal to or higher than the proportion in vaccine recipients will be tested at a one-sided 0.05 significance level by a z-test of proportions or, if the number of severe cases in either group is less than 5, by a Fisher exact test.

- Primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 at least two weeks after the second dose of vaccine or placebo.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1222

- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years).
- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years) with comorbidity.
- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years) without comorbidity.
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years).
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years) with comorbidity.
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years) without comorbidity.
- Secondary endpoint (efficacy): virologically confirmed (RT-PCR positive) severe cases of COVID-19.
- Secondary endpoint (efficacy): virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.

Addendum to CSR will be generated for the extended follow up phase.

8.9 Final analysis

The final analysis of all 25800 participants randomized in the study and of the data collected up to end of the study for all endpoints to be analysed according to the protocol. The final analysis shall be done after the last participant/last visit has been completed.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1223

8.10 Publication of Results

Any formal presentation or publication of data from/ during this trial will be considered jointly between the investigator and the sponsor, as indicated in the contract agreement undersigned by both parties.

8.11 Software

All analyses will be conducted using SAS® Version 9.4.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1224

9. Statistical Considerations

9.1 Multicentre studies

25800 subjects were randomised in 25 sites across India.

9.2 Missing data

Missing data is assumed to be missing and no imputation will be performed. Partial date imputation will be performed for the concomitant medication data please refer appendix 2.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1225

10. Output Presentations

Programs will be developed and maintained and output will be verified in accordance with current risk-based quality control procedures.

Tables, figures, and listings will be produced with validated.

The production environment for statistical analysis consists of statistical analysis software; for example, the SAS System version 9.4 or later.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1226

11. Participant disposition and withdrawal

11.1 Variables and derivations

End of trial classifications are defined as follows.

- Screen failure: Subject for whom informed consent was obtained and documented in writing (i.e., the participant signed an informed consent form), but who did not meet inclusion and exclusion criteria.
- Completed trial: Subjects who completed the trial, as indicated in the Study Phase Disposition eCRF form, will be assumed to have completed trial.
- Discontinued subjects: subjects who discontinued the trial, as indicated in the Study of study eCRF form, will be assumed to have discontinued subjects if at least one partial/full vaccine administrated from trial.

The following parameters will be summarized for the Subject's disposition table as per eCRF:

- Number of screening failure subjects
- Number of Enrolled subjects
- Number of Randomized subjects
- Number of completed subjects.
- Number of discontinued subjects
- in Randomization population Set.
- in FAS population
- in PP population Set.
- in Immunogenicity population Subset.
- in Safety population Set.
- in Category 1 (Symptomatic)
- in Category 2 (Symptomatic/Asymptomatic):
- in Category 3 (Symptomatic/Asymptomatic+Immunogenicity):

The following parameters will be summarised for the study discontinuation table as per eCRF Subject's primary reason for discontinuation (reasons mentioned in eCRF end of study form) which is as follows:

- Adverse Event/Serious Adverse Event
- Protocol violation
- Consent withdrawal
- Migration from the study site

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1227

- Physician decision
- Sponsor termination
- Prohibited Medication
- Death
- Lost to follow-up.
- Others

Derivation:

- indicated as “screen failure” in the eCRF End of study form as “primary reason for study discontinuation” will be assumed screen failure for the trial.
- status is indicated as “COMPLETED” (as per eCRF study End of study form) to ensure that completes as per CRF design.
- Subject status is indicated as “DISCONTINUED” (as per eCRF study EOS form) to ensure that discontinued the as per CRF design.

11.2 Analysis

disposition and Withdrawal will be summarised (frequency and percentages) and the screening failure participants will be summarised (frequency) for the enrolled population by treatment group and participants listing, participant number for the Enrolled Set population by treatment and Subject number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1228

12. Participant demographics and other baseline characteristics

12.1 Variables and derivations

The following demographic and other baseline characteristics will be summarized:

- Age (in Years)
- Age Groups
- Stratification Groups (>= 60 Years age, a HCP and <with any comorbidity)
- Gender
- Race
- Ethnicity
- Height (cm)
- Weight (kg)
- BMI (kg/m2)
- Temperature (°C)
- Results (Serology Test)
- Pregnancy test result
- RT-PCR Result
- Cycle threshold (CT) value - E Gene
- Cycle threshold (CT) value - ORF Gene
- Stable chronic lung disease at baseline
- Stable cardiac disease at baseline
- Severe obesity (body mass index ≥ 35 kg/m2) at baseline
- Controlled Diabetes (Type 1, Type 2) at baseline
- Stable Liver disease at baseline

12.2 Analysis

The following demographic and others baseline characteristics will be summarized for the FAS population by treatment group and presented in data listings for the Randomization Set population by treatment group and Subject number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1229

13. Exposure and Compliance to Study Drug

13.1 Variables and derivations

In eCRF “Vaccine Administration” form we are capturing the treatment dosing related data.

Subject will be considered compliant with overall treatment COVID-19 Vaccine (BBV152) Vaccine/Placebo. if they received the scheduled administration of all doses within the schedule visits

The following parameters will be summarised for the treatment exposure.

- Number of Investigational vaccine administration
- Number of participants that received two doses
- Number of participants that received one dose
- Average number of doses administered.

13.2 Analysis

Treatment exposure and the compliance will be summarised (frequency, missing frequency and percentages) for table for SAF and the listing will be provided for Randomized population set by treatment and Subject number.

.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1230

14. Medical and Co morbidities history

14.1 Variables and derivations

Medical history information will be coded using the MedDRA central coding dictionary Version 23.1 or later. All conditions, which are pre-existing prior to study vaccine administration, must be recorded on the study participant's eCRF

Partial date imputation is not done for Medical and treatment history.

- The following parameters will be summarised for the Subject's Medical history/ Co morbidities as mentioned in eCRF.
- Number of subjects with at least one medical history
- Number of subjects for each medical history by SOC and PT

The following variables will be listed:

- Subject number
- System organ class/ Preferred terms / Reported terms.
- Start date of medical history.
- End date of medical history (If the medical history is ongoing then "Ongoing" text will populate in this variable)

Derivation:

Subject medical history status is indicated as "ongoing" at day 1 (as per eCRF medical history form) is all pre-medical condition at day 1.

14.2 Analysis

Medical history will be summarized by system organ class (SOC), and preferred term (PT), only for the SAF. Medical history/ Co morbidities will be presented as data listings for the randomization population by treatment group and participant number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1231

15. Prior Concomitant, and other medications

15.1 Variables and derivations

In eCRF “Prior or Concomitant Medications” form we are capturing the prior and concomitant medication related data.

All medications will be coded using the WHO Drug dictionary Global B3 format September 1, 2020 or later

‘Prior medications’ are defined any medication prior to first administration of the study drug.

Concomitant medications are defined as any medication taken after or on the first administration of the study drug till the end of the trial.

Prior, Concomitant medication (CM) records will include the medication, Description for CM, Indication, Dose and unit, Frequency, route and start and end date of concomitant medication.

As per eCRF If the question “Was the medication/therapy taken prior to the study” is answered as “YES” then we will consider it as “prior concomitant medication” otherwise If the question “Was the medication/therapy taken prior to the study” is answered as “NO” then we will not consider it as “concomitant medication”

In Appendix 2 the algorithm is given for calculation of partial date imputation for Concomitant Medication and it will be used for partially missing Concomitant Medication start and end date imputation.

The following parameters will be summarised for the Subject’s prior and concomitant medication:

- Number of subjects with at least one prior and concomitant medication
- Number of subjects for each prior and concomitant medication by ATC-2 and PT.

Derivations:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1232

- All medications captured on the “Prior or Concomitant Medications” form of the eCRF will be categorised (prior and concomitant medication), which are identifies as follows:

15.2 Analysis

Prior and concomitant treatment medications will be summarized only for the SAF population and presented in data listings for the Randomization Set population by Treatment group and number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1233

16. Adverse events

16.1 Variables and derivations

Adverse Events (AEs) will be coded using MedDRA central coding dictionary, Version 23.1 or later.

- An adverse event (AE) is any untoward medical occurrence in a participants or clinical investigation Subject administered an INV and which does not necessarily have a causal relationship with this treatment.

- SAE is any untoward medical occurrence that at any dose: Please refer protocol section 26.5

- Adverse Events of Special Interest (AESI): An AESI can be either serious or non-serious. Serious AESIs will be recorded and reported as per reporting guidelines for SAEs. The following AESIs (if any) will be evaluated during the study period.

    - Anaphylaxis
    - Vaccine-associated enhanced respiratory disease (VAERD)
    - Generalized convulsion

The following parameters will be summarised for the Participants adverse events as mentioned in eCRF.

- Number of Participants with at least one AEs
- Number of Participants with at least one drug related AE.
- Number of Participants with at least one serious AEs
- Number of Participants with at least one drug related serious AEs.
- AEs by Severity
- AEs leading to Death.
- Drug-related AEs leading to Death.
- AEs leading to early withdrawn of study.
- AEs by Age group

Derivations:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1234

- The question “Relationship to study drug” is answered as “Certain”, “Probable/Likely” and “Possible” then respective AEs will be considered as drug related AE.
- the question “Is this AEs serious” is answered as “YES” then respective AE will be considered as serious AEs.
- the question “Is this AEs serious” is answered as “YES” and answered as “Certain”, “Probable/Likely” and “Possible” then respective AEs will be considered as drug related SAEs.
- Subject’s primary reason for discontinuation is “DEATH” then we will consider it as AEs leading to death.
- If Relationship to the investigational product is indicated as “RELATED” and Subject’s primary reason for discontinuation is “DEATH” then we will consider it as drug related AEs leading to death
- Subject’s primary reason for discontinuation ADVERSE EVENT” then we will consider it as AEs leading to early withdrawal from study.

16.2 Analysis

An overall summary will be presented as the number of participants within each of the event type categories described in the sub-sections below, including the incidence of AEs by SOC and PT, unless otherwise specified. Both number of participants, number of event (One subject may be counted more than once) and percentage will be provided for the SAF population.

A data listing with all AEs (including coding details [SOC, PT and verbatim term only]) will be presented for the randomized population set by treatment group and Patient number.

16.2.1 Incidence of AEs

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.2 Incidence of Solicited adverse event.

The incidence of all Solicited Local AEs will be summarised by Local Reaction, by maximum severity and Solicited Systemic AEs (please refer section 24.2 in protocol)

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1235

by alphabetically SOC and PT within each SOC and severity will be presented for the SAF population.

16.2.3 Incidence of Medically Attended Adverse Events (MAAEs)

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.4 Incidence of Adverse Event of Special Interest (AESI)

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.5 AEs by severity

The incidence of all AEs will be presented by SOC, PT and severity for the SAF population.

16.2.6 AEs by Outcome

The incidence of all AEs will be presented by SOC, PT and outcome for the SAF population.

16.2.7 Drug-related AEs

The incidence of all drug related AEs will be presented by SOC and PT for the SAF population.

16.2.8 Serious AEs

Serious AEs are defined as AEs for which seriousness is indicated as “yes”.

The incidence of all serious AEs will be presented by SOC and PT. A data listing of serious adverse events (SAEs) will also be presented for the SAF population.

16.2.9 AEs leading to early withdrawal from study.

The incidence of all serious AEs leading to early withdrawal will be presented by SOC and PT. A data listing of AEs leading to early withdrawal from study will be presented for the SAF population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1236

16.2.10 AEs leading to death.

The incidence of all AEs leading to death will be presented by SOC and PT. A data listing of all AEs for deceased participants will be presented for the SAF population.

16.2.11 AEs Age wise adverse events

The incidence of all AEs leading to death will be presented by SOC and PT. A data listing of all AEs for deceased participants will be presented for the SAF population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1237

17. Vital (Including Pulse Oximetry) &General & Systemic Examination

All summaries for vital signs will be based on the SAF population, unless otherwise specified. Data listings for the will be based on the ITT population.

17.1 Variables and derivations

For vital signs, baseline is defined as the last observation made prior to the first administration of study drug.

The following vital signs will be reported for this study:

- Temperature (°C)
- Pulse (beats/min)
- Systolic blood pressure (mmHg)
- Diastolic blood pressure (mmHg)
- Respiratory rate (breaths/min)
- Oxygen saturation (SpO2) %

17.2 Analysis

The Vital sign will be summarized by visit for the SAF. presented in data listings for the Randomized population by treatment group and Subject number Vital sign test and by visit.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1238

18. General Examination

18.1 Variables and derivation

The General examination will be measure on scheduled visits (visit 1 through visit 7)

General Examination for Body systems parameters will be examined as follows:

- Pallor
- Cyanosis
- Hair
- Nails
- Icterus
- Edema
- Lymphadenopathy
- Other General examination observation

These above other general examination observation measurements will be categorised and summarised as follow:

- NORMAL
- ABNORMAL

Note: If the General examination data will be found missing then new category “MISSING” will be added in the summary table.

18.2 Analysis

The General examination will be summarized by visit for the SAF. presented in data listings for the Randomized population by treatment group and Subject number, General examination test and by visit.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1239

19. Primary endpoint assessments

The primary endpoint parameter is mention below.

19.1 Variables and derivations

19.1.1 First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19.

The following variables will be reported for this study:

- Start Date of dose administration ("Vaccine Administration" form in eCRF)
- The symptomatic COVID-19 cases include any participant who meets the Case Definitions for Symptomatic Endpoint or Severe Symptomatic COVID-19
- Start Date of Virologically confirmed
- Time Frame: Day 42 to Month 12.

Derivation:

Follow-up (days)= (date of Last followup – Date of Day 42) +1

Total length of follow up (years) in vaccine/placebo = sum (Follow-up (days))/ 365.25 in respective treatment group.

19.2 Primary endpoint analysis

Estimation of vaccine efficacy (VE) in this study is based on person-time incidence rates: VE = 1 – (nv/Fv)/ (np/Fp) = 1 – R, where R = (nv/Fv) / (np/Fp); nv and np are the numbers of participants who develop PCR-confirmed symptomatic COVID-19 among BBV152 vaccine and placebo recipients, respectively, and Fv and Fp are the corresponding total lengths of follow-up in years in the two groups, with follow-up in years defined as a follow-up in days divided by 365.25. VE will typically be expressed as a percentage. We assume that nv and np follow Poisson distributions with respective parameters λvFv and λpFp; the true (unknown) VE is 1 – λv / λp. Then, conditional on n = nv + np, the total number of participants who develop symptomatic COVID-19, the number nv in the vaccine group follows a binomial distribution with n trials and probability parameter λvFv / (λvFv + λpFp), estimated by P = nv / (nv+np). The estimate VE can be given in terms of P and the ratio h = Fp/Fv, which is expected to be very close to 1, since by the above definitions R = hP / (1-P) and thus VE = 1 –

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1240

hP / (1-P). A two-sided confidence interval (CI) around the estimated VE will be obtained by converting an exact CI around the estimated probability parameter P, using the observed h = Fp/Fv, to a CI for VE. If (PL, PU) is the CI around P, the CI for VE will be [1 – hPU/(1-PU), 1 – hPL/(1-PL)].

The primary analysis of VE will be based on the per-protocol population, excluding participants who were positive for binding antibody titters to SARS-CoV-2 on Day 0, with follow-up for each participant beginning 14 days after the second dose of vaccine or placebo and continuing until the onset of a confirmed COVID-19 case, a protocol deviation that could affect the risk of COVID-19 (for example, receipt of another vaccine against a viral disease), or the end of follow-up. To keep the overall type I error rate for estimating VE at two-sided 0.05, the CI for VE will be adjusted from a 95% CI as needed to account for interim analyses.

Additionally, the same analysis will be performed using the FAS population. Also, subgroup analyses will be done by age group (18-59 years and 60+ years) and by subgroups with and without co-morbidities, using the per-protocol population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1241

20. Secondary Endpoints (Efficacy)

20.1 First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint. [Time Frame: Day 42 to Month 12].

20.1.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.2 Virologically confirmed (RT-PCR positive) severe cases of COVID-19. [Time Frame: Day 42 to Month 12].

20.2.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.3 Virologically confirmed COVID-19 cases of any severity occurring among participants 18 through 59 years of age and ≥60 years of age. [Time Frame: Day 42 to Month 12].

20.3.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.4 Virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1242

[Time Frame: Month 2 to Month 12].

20.4.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) asymptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at time of enrolment

20.5 Virologically confirmed COVID-19 asymptomatic and symptomatic cases occurring from two weeks after the second vaccination. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment. [Time Frame: Month 2 to Month 12]

20.5.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) asymptomatic and symptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at time of enrolment

20.6 The number of participants with virologically confirmed COVID-19 deaths. [Time Frame: Day 42 to Month 12].

20.6.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) cases of COVID-19
- Start Date of Virologically confirmed
- Date of death (related to COVID-19)

20.7 The number of participants with virologically confirmed symptomatic COVID-19. Includes cases that were seropositive at baseline. Excludes cases in which vaccination was incomplete. [Time Frame: Day 42 to

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1243

Month 12].

20.7.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at baseline

20.8 Analyses

Vaccine efficacy will be estimated for confirmed symptomatic SARS-CoV-2 infection in the vaccinated population, excluding participants who were seropositive for SARS-CoV-2 on Day 0 and any participants who inadvertently received one dose of vaccine and one dose of placebo. In addition, VE will be estimated for the period between the first dose and 14 days after the second dose.

Other secondary efficacy analyses will compare the treatment groups with regard to 1) severe PCR confirmed COVID-19 disease and 2) PCR-confirmed SARS-CoV-2 infection, regardless of symptomatology. In addition, VE estimation will be done in linear models with the study site as a random effect and with adjustment for covariates (e.g., age, presence of co-morbidities at baseline). These analyses will be done for endpoint events with onset 14 days or more after the second dose and also for all participants with events after the first dose. VE and its 95% CI will be estimated as in the primary analysis PP populations. Additional that same analysis will be perform for stratification analysis.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1244

21. Secondary Endpoints (Safety)

21.1 Serious Adverse Events (SAEs) occurring at any time in all study participants; SAE rates will be analyzed when the primary efficacy endpoint (130 cases) is reached and at the study end.

21.1.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of SAE (“Adverse Event” form in eCRF)
- Is this AE (“Adverse Event” form in eCRF)
- Causality related to Treatment.
- Seriousness of SAEs
- Death date
- Number of Death

Time Frame: Throughout the study period]. Data will be collected on immediate adverse events (AEs) within 2 hours of vaccination,

21.1.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Serious adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.2 Solicited local and systemic adverse events (AEs).

21.2.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Solicited local and systemic adverse events (“AE form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

Time Frame: within 7 days post each vaccination,

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1245

21.2.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Solicited local and systemic adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.3 Unsolicited adverse events (AEs) occurring between the vaccination and 28 days after the final vaccination, among all study participants.

21.3.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of unsolicited local and systemic adverse events (“Post Vaccination in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)
- Time Frame: Within 28 days post vaccination,

21.3.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of unsolicited local and systemic adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.3.3 Immediate adverse events with 30 minutes of vaccination

21.3.4 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Solicited local and systemic adverse events (“AE form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)
- Time Frame: within 30 minutes post each vaccination.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1246

21.3.5 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Immediate adverse events with 30 minutes will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.4 Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period

21.4.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period (“AEs form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.4.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.5 The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial of hospitalization.

21.5.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1247

- Start Date of enhanced respiratory disease episodes reported events (“AEs form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.5.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial of hospitalization will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.6 Adverse Event of Special Interest (AESI).

21.6.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of adverse Event of Special Interest (AESI) (“AEs in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.6.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of adverse Event of Special Interest (AESI) will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1248

22. Secondary Endpoints (Immunogenicity)

22.1 Geometric Mean Titer (GMT) of SARS-CoV-2 Specific Neutralizing Antibody (nAb)

22.1.1 Variables and derivations

Neutralizing Antibody (nAb)

[Time Frame: Month 0 to Month 12]

22.1.2 Analyses

GMTs of SARS-CoV-2 Specific Neutralizing Antibody (nAb) will be summarised by point estimate and the corresponding 95% CI. Summary statistics for nAb (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS. Analysis will be done based on Immunogenicity analysis set.

22.2 Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Specific Neutralizing Antibody (nAb

22.2.1 Variables and derivations

Neutralizing Antibody (nAb)

[Time Frame: Month 0 to Month 12]

22.2.2 Analyses

GMFR of SARS-CoV-2 Specific Neutralizing Antibody (nAb) will be summarised by point estimate and the corresponding 95% CI. Analysis will be done based on Immunogenicity analysis set.

22.3 Geometric Mean Titer (GMT) of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb).

22.3.1 Variables and derivations

Anti- S1 IgG, Anti-N IgG, Anti-RBD, IgG

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1249

[Time Frame: Month 0 to Month 12]

22.3.2 Analyses

GMTs of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb) will be summarised by point estimate and the corresponding 95% CI. Summary statistics for bAb (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS based on S1 protein-specific binding antibody titer. Analysis will be done based on Immunogenicity analysis set.

22.4 Lot-to-Lot consistency will be assessed based on the neutralizing titer of the three consistency lots used in the trial.

22.4.1 Variables and derivations

Microneutralization Test (MNT_{50}) and Plaque Reduction Neutralization Test ($PRNT_{50}$)

[Time Frame: Month 0 to Month 12]

22.4.2 Analyses

A total of 600 participants were randomised to the BBV152 lot consistency study in a 3:1 ratio of Vaccine to Placebo (Lot 1, Lot 2, Lot 3, Placebo)). The 3 lots were 3 consecutively manufactured lots. Thus, 450 participants (150 in each lot) in the BBV152 group and 150 participants in the Placebo group were included. The analysis of lot consistency will be based on the GMTs of neutralizing antibodies at Day 56. Summary statistics for neutralizing antibody titer at Day 56 (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS. Analysis will be done based on Immunogenicity analysis set.

GMT ratios of neutralizing antibodies at Day 56 for each pair of lots (point estimate and 95% confidence interval) will be calculated. The 95% CIs will be calculated from CIs on differences between means of log10(titer), using SAS PROC TTEST).

Lot consistency will be assessed using the criterion that 95% CIs for GMT ratios for all pairs of lots must be contained within the interval [0.5, 2.0], as well as the criterion that all 95% CIs for GMT ratios must be within the interval [0.67, 1.5] for US-FDA.

24. Appendix 1: Programming Conventions for Tables, Data Listings and Figures (TLFs)

All percentages (%) for a specific summary are calculated using the total number of subjects included in the relevant analysis population as the denominator, unless otherwise specified.

Data listings will be based on all subjects, unless otherwise specified.

In general, if we have no response or record for respective parameter in data (i.e. n=0) then while presenting statistics in table only n will be presented as “0” and other statistics will be left blank. In case, we have only one response or record for respective parameter (i.e., n=1) in data then statistic (S.D) in table will be presented blank.

By default, for continuous measures, summary statistics will include, unless otherwise specified:

• Sample Size (N)
- n
- Mean
- Median
- Maximum
- Minimum
- SDs, and
- Frequency of Missing Values.

For categorical measures, summary statistics will include, unless otherwise specified:

- Sample Size (n)
- Frequency of non-missing values
- Percentage, and
- Frequency of Missing Values.

For efficacy tables, below statistics will be included, unless otherwise specified:

- Estimate
- 95 % Confidence Interval
- P-value

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1252

24.1 Paper Size, Orientation and Margins

The margin, page size and line size specifications as stipulated in Table 23.1 will be used for the presentation of all TLFs.

Table 23.1: Output margin, page size and line size specifications

	Landscape	Portrait
Margins (Inches):		
Top	1.25	1
Bottom	1	1
Left	1	1.25
Right	1	1
Header (Inches)	0.5	0.5
Footer (Inches)	0.5	0.5
SAS® specifications:		
PAGESIZE	46	67
LINE SIZE	134	93
Body Font Size	10	10
Heading font Size	12	12

24.2 Fonts

The font type “Times New Roman” must be used for tables, listings, and figures, with a font size of minimum 9 and it should be consistent for the whole report. The font colour must be black for tables, listings, and figures.

Colours are allowed for figures if the data series can be distinguished clearly if printed in black and white paper.

24.3 Header Information

Headers should be defined as follows:

- The header should be placed at the top of the page (same place on each page).
- The header should be placed at the top of the page (same place on each page).
- The sponsor name should appear in row 1, left-aligned in header.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1253

- The word “Interim Analysis/Final analysis” would be appeared in row 1, centered aligned in header.
- The protocol number should appear in row 2, left-aligned in header.
- The word “Cut-off date: DDMMMYYYY” would appear in row 2, centre aligned in header
- The word “CONFIDENTIAL” should appear in row 1, centered aligned at footer in compiled file only.
- The TLF identification number should appear in row 3, centered in header.
- The TLF title should start in row 4, centered in header.
- The TLF population should appear in row 5, centered in header. The population should be spelled out in full, e.g., Enrolled Analysis Set.
- Row 6 in header should be a continuous row of underscores (‘_’) (the number of underscores should equal the line size).
- Row 7 in header should be a blank line.
- Sentence case should be used for titles in header.
- Titles should not contain quotation marks or footnote references.
- The column headings should be underlined with a row of underscores (‘_’).
- Column headings spanning more than one column should be underlined and have underscores on either side of the title and should be centered.
- Column headings containing numbers should be centered.
- Column headings would be in mixed case.
- In general, the analysis population count should appear in the column header in the form “(N=XX)”.
- The page identification in the format Page X of Y (where Y is the total number of pages for the TLF) should appear in row 2, right aligned at Footer for compiled TLFs if required.

24.4 Table and Data Listing Table, Listing and Figure (TLF) Conventions

24.4.1 General

- The first row in the body of the table or data listing will be blank.
- The left-hand column should start in Column 1.
- Rounding will be done with the SAS® function ROUND if applicable.
- Numerical values in tables should be rounded and not truncated as per section (26.4.2) for respective statistics.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1254

- Numerical values will be center aligned.
- Text values should be left aligned.
- The first letter of a text entry should be capitalized.
- The study drug will be appeared first in tables with treatment group as columns.
- The width of the TLF should match the line size.

24.4.2 Univariate statistics

- Statistics should be presented in the same order across tables (i.e., n, mean, SD, minimum, median and maximum).
- If the original data has N decimal places, then the summary statistics would have the following decimal places:
- Minimum, maximum: N.
- Mean and median: N +1.
- SD: N + 2.
- CI: N+1
- Point estimate: N+1.

24.4.3 Frequencies and percentages [n, (m) and %]

- Count values should be reported, with one space between the right the percent inside parentheses and the left the mention. Parentheses should be justified to accept a maximum of 100.0 as a value and padded with blank space if the percent is less than 100.0. An example is given below:
- 156, 77, (100.0)
- 56, 50, (64.9)
- 0, (0.0)
- Percent values should be reported inside parentheses, with one space between the right parenthesis of the mention and the left parenthesis of the percentage. Parentheses should be justified to accept a maximum of 100.0 as a value and padded with blank space if the percent is less than 100.0. An example is given below:
- 77 (100.0)
- 50 (64.9)
- 0 (0.0)
- Percentages may be reported to 0 decimal places as appropriate (for example, where the denominator is relatively small).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1255

- Where counts are zero, mentions of 0 and percentages of 0.0 should appear in the table.

24.4.4 Confidence intervals (CIs)

- CIs would be presented with one additional decimal place as that of the raw data.
- CIs will be presented as [lower bound, upper bound].

24.4.5 P-values

- P-values should be reported to four decimal places.

24.4.6 Ratios/Estimate

- Ratios/estimate would be reported with one additional decimal place as that of the raw data.

24.4.7 Spacing

- There should be a minimum of 1 blank space between columns (preferably 2).

24.4.8 Missing values

- A “0” should be used to indicate a zero frequency.
- A blank will be used to indicate missing data in data listings.

24.5 Tables, Listings and Figure output conventions

The compiled file will be presented in PDF format with TOC for listing and table/figures separately.

The Table, Listing and Figures will be provided in RTF and PDF files using the SAS® Output Delivery System (ODS) and in addition all listings also be provided in excel file.

All percentages (%) for a specific summary are calculated using the total number of subjects included in the relevant analysis population as the denominator, unless otherwise specified.

Data listings will be based on all subjects treated, unless otherwise specified.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1256

By default, descriptive statistics for quantitative measurements will include the number of subjects (n), mean, standard deviation (SD), minimum, median and maximum.

24.6 Dates and times

In footer of the TLFs date and time will be presented in format ddmmyyyy and hh: mm. and Depending on data available, dates and times will take the form ddmmyyyy and hh:mm.

24.7 Spelling format

The spelling format to be used is English US.

24.8 Presentation of treatment

Treatment: BBV152 vaccine and placebo,

24.9 Presentation of visits

- Baseline (Month 0)
- Visit 1 (Month 1+2 days)
- Visit 3 (Month 2±1 week
- Visit 4 (Month 3±1 week)
- Visit 5 (Month 4±1 week)
- Visit 6 (Month 5±1 week):
- Visit 7 (Month 6±1 week)
- Visit 8 (Month 7±1 week):
- Visit 9 (Month 8±1 week
- Visit 10 (Month 9±1 week)
- Visit 11 (Month 10±1 week)
- Visit 12 (Month 11±1 week)
- Visit 13 (Month 12±1 week):

Preface

Public Comment

This guidance is being issued to address the coronavirus disease 2019 (COVID-19) public health emergency. This guidance is being implemented without prior public comment because the Food and Drug Administration (FDA or Agency) has determined that prior public participation for this guidance is not feasible or appropriate (see section 701(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 371(h)(1)(C)) and 21 CFR 10.115(g)(2)). This guidance document is being implemented immediately, but it remains subject to comment in accordance with the Agency's good guidance practices.

Comments may be submitted at any time for Agency consideration. Submit written comments to the Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. Submit electronic comments to https://www.regulations.gov. All comments should be identified with the docket FDA-2020-D-1137 and complete title of the guidance in the request.

Additional Copies

Additional copies are available from the FDA webpage titled "COVID-19-Related Guidance Documents for Industry, FDA Staff, and Other Stakeholders," *available at* https://www.fda.gov/emergency-preparedness-and-response/mcm-issues/covid-19-related-guidance-documents-industry-fda-staff-and-other-stakeholders, the FDA webpage titled "Search for FDA Guidance Documents," *available at* https://www.fda.gov/regulatory-information/search-fda-guidance-documents, and the FDA webpage titled "Biologics Guidances," *available at* https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances. You may also send an email request to ocod@fda.hhs.gov to receive an additional copy of the guidance. Please include the docket number FDA-2020-D-1137 and complete title of the guidance in the request.

Contains Nonbinding Recommendations

Development and Licensure of Vaccines to Prevent COVID-19

Guidance for Industry

This guidance represents the current thinking of the Food and Drug Administration (FDA or Agency) on this topic. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. To discuss an alternative approach, contact the FDA staff responsible for this guidance as listed on the title page.

I. INTRODUCTION

FDA plays a critical role in protecting the United States from threats such as emerging infectious diseases, including the Coronavirus Disease 2019 (COVID-19) pandemic which has been caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). FDA is committed to providing timely guidance to support response efforts to this pandemic.

FDA is issuing this guidance to assist sponsors in the clinical development and licensure of vaccines for the prevention of COVID-19.

This guidance is intended to remain in effect for the duration of the public health emergency related to COVID-19 declared by the Secretary of Health and Human Services (HHS) on January 31, 2020, effective January 27, 2020, including any renewals made by the HHS Secretary in accordance with section 319(a)(2) of the Public Health Service Act (PHS Act) (42 U.S.C. 247d(a)(2)). The recommendations described in the guidance are expected to assist the Agency and sponsors in the clinical development and licensure of vaccines for the prevention of COVID-19 and reflect the Agency's current thinking on this issue.

Given this public health emergency, and as discussed in the Notice in the *Federal Register* of March 25, 2020, titled "Process for Making Available Guidance Documents Related to Coronavirus Disease 2019" (85 FR 16949), *available at* https://www.govinfo.gov/content/pkg/FR-2020-03-25/pdf/2020-06222.pdf, this guidance is being implemented without prior public comment because FDA has determined that prior public participation for this guidance is not feasible or appropriate (see section 701(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act (FD&C Act), (21 U.S.C. 371(h)(1)(C)), and 21 CFR 10.115(g)(2)). This guidance document is being implemented immediately, but it remains subject to comment in accordance with the Agency's good guidance practices. However, FDA expects that the recommendations set forth in this revised guidance will continue to apply outside the context of the current public health emergency.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1263

Therefore, within 60 days following the termination of the public health emergency, FDA intends to revise and replace this guidance with an updated guidance that incorporates any appropriate changes based on comments received on this guidance and the Agency's experience with implementation.

In general, FDA's guidance documents, including this guidance, do not establish legally enforceable responsibilities. Instead, guidances describe the Agency's current thinking on a topic and should be viewed only as recommendations, unless specific regulatory or statutory requirements are cited. The use of the word *should* in Agency guidance means that something is suggested or recommended, but not required.

II. BACKGROUND

There is currently an outbreak of respiratory disease caused by a novel coronavirus. The virus has been named "SARS-CoV-2" and the disease it causes has been named "COVID-19." On January 31, 2020, the Secretary of HHS issued a declaration of a public health emergency related to COVID-19 and mobilized the Operating Divisions of HHS.[1] In addition, on March 13, 2020, the President declared a national emergency in response to COVID-19.[2]

The SARS-CoV-2 pandemic presents an extraordinary challenge to global health. There are currently no FDA-licensed vaccines to prevent COVID-19. Commercial vaccine manufacturers and other entities are developing COVID-19 vaccine candidates using different technologies including RNA, DNA, protein, and viral vectored vaccines.

This guidance describes FDA's current recommendations regarding the data needed to facilitate clinical development and licensure of vaccines to prevent COVID-19. There are currently no accepted surrogate endpoints that are reasonably likely to predict clinical benefit of a COVID-19 vaccine. Thus, at this time, the goal of development programs should be to pursue traditional approval via direct evidence of vaccine safety and efficacy in protecting humans from SARS-CoV-2 infection and/or clinical disease.

This guidance provides an overview of key considerations to satisfy regulatory requirements set forth in the investigational new drug application (IND) regulations in 21 CFR Part 312 and licensing regulations in 21 CFR Part 601 for chemistry, manufacturing, and controls (CMC), and nonclinical and clinical data through development and licensure, and for post-licensure safety evaluation of COVID-19 preventive vaccines.[3] FDA is committed to supporting all scientifically sound approaches to attenuating the clinical impact of COVID-19. Sponsors engaged in the development of vaccines to prevent COVID-19 should also see the guidance for industry and investigators, *COVID-19 Public Health Emergency: General Considerations for Pre-IND Meeting Requests for COVID-19 Related Drugs and Biological Products* (Ref. 1).

---

[1] Secretary of Health and Human Services Alex M. Azar, Determination that a Public Health Emergency Exists. (Jan. 31, 2020, renewed April 21, 2020), *available at* https://www.phe.gov/emergency/news/healthactions/phe/Pages/default.aspx.

[2] Proclamation on Declaring a National Emergency Concerning the Novel Coronavirus Disease (COVID-19) Outbreak (Mar. 13, 2020), *available at* https://www.whitehouse.gov/presidential-actions/proclamation-declaring-national-emergency-concerning-novel-coronavirus-disease-covid-19-outbreak/.

[3] Novel devices used to administer COVID-19 vaccines raise additional issues which are not addressed in this guidance.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1264

There are many COVID-19 vaccines currently in development and FDA recognizes that the considerations presented here do not represent all the considerations necessary to satisfy statutory and regulatory requirements applicable to the licensure of vaccines intended to prevent COVID-19. The nature of a particular vaccine and its intended use may impact specific data needs. We encourage sponsors to contact the Center for Biologics Evaluation and Research (CBER) Office of Vaccines Research and Review (OVRR) with specific questions.

III. CHEMISTRY, MANUFACTURING, AND CONTROLS – KEY CONSIDERATIONS

A. General Considerations

- COVID-19 vaccines licensed in the United States must meet the statutory and regulatory requirements for vaccine development and approval, including for quality, development, manufacture, and control (section 351(a) of the Public Health Service Act (PHS Act), (42 U.S.C. 262)). The vaccine product must be adequately characterized and its manufacture in compliance with applicable standards including current good manufacturing practice (cGMP) (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and 21 CFR Parts 210, 211, and 610). It is critical that vaccine production processes for each vaccine are well defined and appropriately controlled to ensure consistency in manufacturing.

- COVID-19 vaccine development may be accelerated based on knowledge gained from similar products manufactured with the same well-characterized platform technology, to the extent legally and scientifically permissible. Similarly, with appropriate justification, some aspects of manufacture and control may be based on the vaccine platform, and in some instances, reduce the need for product-specific data. FDA recommends that vaccine manufacturers engage in early communications with OVRR to discuss the type and extent of chemistry, manufacturing, and control information needed for development and licensure of their COVID-19 vaccine.

B. Manufacture of Drug Substance and Drug Product

- Data should be provided to show that all source material used in manufacturing is adequately controlled, including, for example, history and qualification of cell banks, history and qualification of virus banks, and identification of all animal derived materials used for cell culture and virus growth.

- Complete details of the manufacturing process must be provided in a Biologics License Application (BLA) to support licensure of a COVID-19 vaccine (21 CFR 601.2). Accordingly, sponsors should submit data and information identifying critical process parameters, critical quality attributes, batch records, defined hold times, and the in-process testing scheme. Specifications should be established for

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1265

each critical parameter. Validation data from the manufacture of platform-related products may provide useful supportive information, particularly in the identification of critical parameters.

- In-process control tests must be established that allow quality to be monitored for each lot for all stages of production (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.110(a)).

- Data to support the consistency of the manufacturing process should be provided, including process validation protocols and study reports, data from engineering lots, and drug substance process performance qualification.

- The manufacturing process must be adequately validated (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.100(a) and 211.110). Validation would typically include a sufficient number of commercial-scale batches that can be manufactured routinely, meeting predetermined in-process controls, critical process parameters, and lot release specifications. Typically, data on the manufacture of at least three commercial-scale batches are sufficient to support the validation of the manufacturing process (Ref. 2).

- A quality control system should be in place for all stages of manufacturing, including a well-defined testing program to ensure in process/intermediate product quality and product quality throughout the formulation and filling process. This system should also include a well-defined testing program to ensure drug substance quality profile and drug product quality for release. Data on the qualification/validation for all quality indicating assays should be submitted to the BLA to support licensure.

- All quality-control release tests, including key tests for vaccine purity, identity and potency, should be validated and shown to be suitable for the intended purpose. Release specifications are product specific and will be discussed with the sponsor as part of the review of a BLA.

- If adequately justified, final validation of formulation and filling operations may be completed after product approval if the impact on product quality is not compromised. It is important that any data that will be submitted after product approval be agreed upon prior to licensure and be submitted as a postmarketing commitment using the appropriate submission category.

- For vaccine licensure, the stability and expiry date of the vaccine in its final container, when maintained at the recommended storage temperature, should be demonstrated using final containers from at least three final lots made from different vaccine bulks.

- Storage conditions, including container closure integrity, must be fully validated (21 CFR 211.166).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1266

- The vaccine must have been shown to maintain its potency for a period equal to that from the date of release to the expiry date (21 CFR 601.2 and 610.10). Post marketing commitments to provide full shelf life data may be acceptable with appropriate justification.

- A product specific stability program should be established to verify that licensed product maintains quality over the defined shelf life.

C. Facilities and Inspections

- Facilities must be of suitable size and construction to facilitate operations and should be adequately designed to prevent contamination, cross-contamination and mix-ups (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable,21 CFR 211.42(a)). All utilities (including plumbing and sanitation) must be validated, and HVAC systems must provide adequate control over air pressure, micro-organisms, dust, humidity, and temperature, and sufficient protection or containment as needed (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.46(c)) (Ref. 3). Facility and equipment cleaning and maintenance processes must be developed and validated (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.56(c) and 211.67(b)).

- Manufacturing equipment should be qualified and sterile filtration and sterilization processes validated. Aseptic processes should be adequately validated using media simulations and personnel should be trained and qualified for their intended duties.

- A quality control unit must be established and must have the responsibility for oversight of manufacturing, and review and release of components, containers and closures, labeling, in-process material, and final products (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.22). The quality control unit must have the responsibility for approving validation protocols, reports, investigate deviations, and institute corrective and preventive actions.

- FDA recommends that vaccine manufacturers engage in early communication with CBER's Office of Compliance and Biologics Quality, Division of Manufacturing and Product Quality to discuss facility preparation and inspection timing.

- Pre-license inspections of manufacturing sites are considered part of the review of a BLA and are generally conducted following the acceptance of a BLA filing (21 CFR 601.20). During the COVID-19 public health emergency, FDA is utilizing all available tools and sources of information to support regulatory decisions on applications that include sites impacted by FDA's ability to inspect due to COVID-19. During this interim period, we are using additional tools, where available, to determine the need for an on-site inspection and to support the

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1267

application assessment, such as reviewing a firm's previous compliance history, and requesting records in advance of or in lieu of on-site inspections or voluntarily from facilities and sites.

IV. NONCLINICAL DATA – KEY CONSIDERATIONS

A. General Considerations

- The purpose of nonclinical studies of a COVID-19 vaccine candidate is to define its immunogenicity and safety characteristics through *in vitro* and *in vivo* testing. Nonclinical studies in animal models[4] help identify potential vaccine related safety risks and guide the selection of dose, dosing regimen, and route of administration to be used in clinical studies. The extent of nonclinical data required to support proceeding to first in human (FIH) clinical trials depends on the vaccine construct, the supportive data available for the construct and data from closely related vaccines.

- Data from studies in animal models administered certain vaccine constructs against other coronaviruses (SARS-CoV and MERS-CoV) have raised concerns of a theoretical risk for COVID-19 vaccine-associated enhanced respiratory disease (ERD). In these studies, animal models were administered vaccine constructs against other coronaviruses and subsequently challenged with the respective wild-type virus. These studies have shown evidence of immunopathologic lung reactions characteristic of a Th-2 type hypersensitivity similar to ERD described in infants and animals that were administered formalin-inactivated respiratory syncytial virus (RSV) vaccine and that were subsequently challenged with RSV virus due to natural exposure or in the laboratory, respectively (Refs. 4-9). Vaccine candidates should be assessed in light of these studies as described in section D, below.

- FDA recommends that vaccine manufacturers engage in early communications with FDA to discuss the type and extent of nonclinical testing required for the particular COVID-19 vaccine candidate to support proceeding to FIH clinical trials and further clinical development.

B. Toxicity Studies (Refs. 10-14)

- For a COVID-19 vaccine candidate consisting of a novel product type and for which no prior nonclinical and clinical data are available, nonclinical safety studies will be required prior to proceeding to FIH clinical trials 21 CFR 312.23(a)(8).

[4] The preclinical program for any investigational product should be individualized with respect to scope, complexity, and overall design. We support the principles of the "3Rs," to reduce, refine, and replace animal use in testing when feasible. Proposals, with justification for any potential alternative approaches (e.g., in vitro or in silico testing), should be submitted during early communication meetings with FDA (see section VI of this document). We will consider if such an alternative method could be used in place of an animal test method.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1268

- In some cases, it may not be necessary to perform nonclinical safety studies prior to FIH clinical trials because adequate information to characterize product safety may be available from other sources. For example, if the COVID-19 vaccine candidate is made using a platform technology utilized to manufacture a licensed vaccine or other previously studied investigational vaccines and is sufficiently characterized, it may be possible to use toxicology data (e.g., data from repeat dose toxicity studies, biodistribution studies) and clinical data accrued with other products using the same platform to support FIH clinical trials for that COVID-19 vaccine candidate. Vaccine manufacturers should summarize the findings and provide a rationale if considering using these data in lieu of performing nonclinical safety studies.

- When needed to support proceeding to FIH clinical trials, nonclinical safety assessments including toxicity and local tolerance studies must be conducted under conditions consistent with regulations prescribing good laboratory practices for conducting nonclincial laboratory studies (GLP) (21 CFR Part 58). Such studies should be completed and analysed prior to initiation of FIH clinical trials. When toxicology studies do not adequately characterize risk, additional safety testing should be conducted as appropriate.

- Data from toxicity studies may be submitted as unaudited final draft toxicicologic reports to accelerate proceeding to FIH clincial trials with COVID-19 vaccine candidates. The final, fully quality-assured reports should be available to FDA within 120 days of the start of the FIH clinical trial.

- Use of COVID-19 preventive vaccines in pregnancy and in women of childbearing potential will be an important consideration for vaccination programs. Therefore, FDA recommends that prior to enrolling pregnant women and women of childbearing potential who are not actively avoiding pregnancy in clinical trials, sponsors conduct developmental and reproductive toxicity (DART) studies with their respective COVID-19 vaccine candidate. Alternatively, sponsors may submit available data from DART studies with a similar product using comparable platform technology if, after consultation with the agency, the agency agrees those data are scientifically sufficient.

- Biodistribution studies in an animal species should be considered if the vaccine construct is novel in nature and there are no existing biodistribution data from the platform technology. These studies should be conducted if there is a likelihood of altered infectivity and tissue tropism or if a novel route of administration and formulation is to be used.

C. Characterization of the Immune Response in Animal Models

- Immunogenicity studies in animal models responsive to the selected COVID-19 vaccine antigen should be conducted to evaluate the immunologic properties of the COVID-19 vaccine candidate and to support FIH clinical trials. The aspects of

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1269

immunogenicity to be measured should be appropriate for the vaccine construct and its intended mechanism of action.

- Studies should include an evaluation of humoral, cellular, and functional immune responses, as appropriate to each of the included COVID-19 antigens. Use of antigen-specific enyzme linked immunosorbent assays (ELISA) should be considered to characterize the humoral response. Evaluation of cellular reponses should include the examination of CD8+ and CD4+ T cell responses using sensitive and specific assays. The functional activity of immune responses should be evaluated *in vitro* in neutralization assays using either wild-type virus or pseudovirion virus. The assays used for immunogencity evaluation should be demonstrated to be suitable for their intended purpose.

D. Studies to Address the Potential for Vaccine-associated Enhanced Respiratory Disease

- Current knowledge and understanding of the potential risk of COVID-19 vaccine associated ERD is limited, as is understanding of the value of available animal models in predicting the likelihood of such occurrence in humans. Nevertheless, studies in animal models (e.g., rodents and non-human primates) are considered important to address the potential for vaccine-associated ERD.

- Post-vaccination animal challenge studies and the characterization of the type of the nonclinical and clinical immune response induced by the particular COVID-19 vaccine candidate can be used to evaluate the likelihood of the vaccine to induce vaccine-associated ERD in humans.

- To support proceeding to FIH clinical trials, sponsors should conduct studies characterizing the vaccine-induced immune response in animal models evaluating immune markers of potential ERD outcomes. These should include assessments of functional immune responses (e.g., neutralizing antibody) versus total antibody responses and Th1/Th2 balance in animals vaccinated with clinically relevant doses of the COVID-19 vaccine candidate.

- COVID-19 vaccine candidates with immunogenicity data demonstrating high neutralizing antibody titers and Th1-type T cell polarization may be allowed to proceed to FIH trials without first completing postvaccination challenge studies in appropriate animal models, provided adequate risk mitigation strategies are put in place in the FIH trials. In these situations, postvaccination challenge studies are expected to be conducted in parallel with FIH trials to ensure the potential for vaccine-associated ERD is addressed prior to enrolling large numbers of human subjects into Phase 2 and 3 clinical trials. For COVID-19 vaccine candidates for which other data raise increased concerns about ERD, postvaccination animal challenge data and/or animal immunopathology studies are critical to assess protection and/or ERD *prior* to advancing to FIH clinical trials.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1270

- The totality of data for a specific COVID-19 vaccine candidate, including data from postvaccination challenge studies in small animal models and from FIH clinical trials characterizing the type of immune responses induced by the vaccine will be considered in determining whether Phase 3 studies can proceed in the absence of postvaccination challenge data to address risk of ERD.

V. CLINICAL TRIALS – KEY CONSIDERATIONS

A. General Considerations

- Understanding of SARS-CoV-2 immunology, and specifically vaccine immune responses that might predict protection against COVID-19, is currently limited and evolving. Thus, while evaluation of immunogenicity is an important component of COVID-19 vaccine development, at this time, the goal of development programs should be to pursue traditional approval via direct evidence of vaccine efficacy in protecting humans from SARS-CoV-2 infection and/or disease.

- Clinical development programs for COVID-19 vaccines might be expedited by adaptive and/or seamless clinical trial designs (described below) that allow for selection between vaccine candidates and dosing regimens and for more rapid progression through the usual phases of clinical development.

- Regardless of whether clinical development programs proceed in discrete phases with separate studies or via a more seamless approach, an adequate body of data, including data to inform the risk of vaccine-associated ERD, will be needed as clinical development progresses to support the safety of vaccinating the proposed study populations and number of participants and, for later stage development, to ensure that the study design is adequate to meet its objectives.

- FDA can provide early advice, and potentially concurrence in principle, on plans for expedited/seamless clinical development. However, sponsors should plan to submit summaries of data available at each development milestone for FDA review and concurrence prior to advancing to the next phase of development.

- Conducting clinical trials in the setting of a public health emergency presents operational challenges. FDA has issued guidance to provide general considerations to assist sponsors in assuring the safety of trial participants, maintaining compliance with good clinical practice (GCP), and minimizing risks to trial integrity for the duration of the COVID-19 public health emergency. It should be noted that not all of the recommendations in that guidance may be applicable to vaccine development, given some of the different considerations for these products (Ref. 15).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1271

B. Trial Populations

- Once acceptable pre-clinical data are available, FIH and other early phase studies (which typically expose 10–100 participants to each vaccine candidate being evaluated) should first enroll healthy adult participants who are at low risk of severe COVID-19. Exclusion of participants at higher risk of severe COVID-19 from early phase studies is necessary to mitigate potential risk of vaccine-associated ERD until additional data to inform that potential risk becomes available through ongoing product development.

    - As the understanding of COVID-19 pathogenesis continues to evolve, exclusion criteria should reflect the current understanding of risk factors for more severe COVID-19, such as those described by the Centers for Disease Control and Prevention (Ref. 16).

    - Older adult participants (e.g., over 55 years of age) may be enrolled in FIH and other early phase studies so long as they do not have medical comorbidities associated with an increased risk of severe COVID-19. Some preliminary safety data in younger adults (e.g., 7 days after a single vaccination) should be available prior to enrolling older adult participants, especially for vaccine platforms without prior clinical experience.

    - If possible, early clinical studies should also exclude participants at high risk of SARS-CoV-2 exposure (e.g., healthcare workers).

- Sponsors should collect and evaluate at least preliminary clinical safety and immunogenicity data for each dose level and age group (e.g., younger versus older adults) to support progression of clinical development to include larger numbers (e.g., hundreds) of participants and participants at higher risk of severe COVID-19.

    - Preliminary immunogenicity data from early phase development should include assessments of neutralizing vs. total antibody responses and Th1 vs. Th2 polarization.

    - Additional data to further inform potential risk of vaccine-associated ERD and to support progression of clinical development, if available, may include preliminary evaluation of COVID-19 disease outcomes from earlier clinical development and results of non-clinical studies evaluating protection and/or histopathological markers of vaccine-associated ERD following SARS-CoV-2 challenge.

- To generate sufficient data to meet the BLA approval standard, late phase clinical trials to demonstrate vaccine efficacy with formal hypothesis testing will likely need to enroll many thousands of participants, including many with medical comorbidities for trials seeking to assess protection against severe COVID-19.

    - Initiation of late phase trials should be preceded by adequate characterization of safety and immunogenicity (e.g., in a few hundred participants for each

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1272

vaccine candidate, dose level, and age group to be evaluated) to support general safety, potential for vaccine efficacy, and low risk of vaccine-associated ERD.

- Results of non-clinical studies evaluating protection and/or histopathological markers of vaccine-associated ERD following SARS-CoV-2 challenge and COVID-19 disease outcomes from earlier clinical development are other potentially important sources of information to support clinical trials with thousands of participants.

- Although establishing vaccine safety and efficacy in SARS-CoV-2 naïve individuals is critical, vaccine safety and COVID-19 outcomes in individuals with prior SARS-CoV-2 infection, which might have been asymptomatic, is also important to examine because pre-vaccination screening for prior infection is unlikely to occur in practice with the deployment of licensed COVID-19 vaccines. Therefore, COVID-19 vaccine trials need not screen for or exclude participants with history or laboratory evidence of prior SARS-CoV-2 infection. However, individuals with acute COVID-19 (or other acute infectious illness) should be excluded from COVID-19 vaccine trials.

- FDA encourages the inclusion of diverse populations in all phases of vaccine clinical development. This inclusion helps to ensure that vaccines are safe and effective for everyone in the indicated populations.

  - FDA strongly encourages the enrollment of populations most affected by COVID-19, specifically racial and ethnic minorities.

  - Evaluation of vaccine safety and efficacy in late phase clinical development in adults should include adequate representation of elderly individuals and individuals with medical comorbidities.

  - FDA encourages vaccine developers to consider early in their development programs data that might support inclusion of pregnant women and women of childbearing potential who are not actively avoiding pregnancy in pre-licensure clinical trials (Ref. 17).

  - It is important for developers of COVID-19 vaccines to plan for pediatric assessments of safety and effectiveness, given the nature of the COVID-19 public health emergency, and to help ensure compliance with the Pediatric Research Equity Act (PREA) (section 505B of the FD&C Act (21 U.S.C. 355c)) (Ref. 18). The epidemiology and pathogenesis of COVID-19, and the safety and effectiveness of COVID-19 vaccines, may be different in children compared with adults. In order to ensure compliance with 21 CFR Part 50 Subpart D (Additional safeguards for children in clinical investigations), considerations on the prospect of direct benefit and acceptable risk to support initiation of pediatric studies, and the appropriate design and endpoints for pediatric studies, should be discussed in the context of specific vaccine development programs.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1273

C. Trial Design

- Early phase trials often aim to down-select among multiple vaccine candidates and/or dosing regimens via randomization of participants to different treatment groups. While including a placebo control and blinding are not required for early phase studies, doing so may assist in interpretation of preliminary safety data.

- Later phase trials, including efficacy trials, should be randomized, double-blinded, and placebo controlled.

    - An individually randomized controlled trial with 1:1 randomization between vaccine and placebo groups is usually the most efficient study design for demonstrating vaccine efficacy. Other types of randomization, such as cluster randomization, may be acceptable but require careful consideration of potential biases that are usually avoided with individual randomization.

    - An efficacy trial that evaluates multiple vaccine candidates against a single placebo group may be an acceptable approach to further increase efficiency, provided that the trial is adequately designed with appropriate statistical methods to evaluate efficacy.

    - If the availability of a COVID-19 vaccine proven to be safe and effective precludes ethical inclusion of a placebo control group, that vaccine could serve as the control treatment in a study designed to evaluate efficacy with non-inferiority hypothesis testing.

- Protocols for adaptive trials should include pre-specified criteria for adding or removing vaccine candidates or dosing regimens, and protocols for seamless trials should include pre-specified criteria (e.g., safety and immunogenicity data) for advancing from one phase of the study to the next.

- Follow-up of study participants for COVID-19 outcomes (in particular, for severe COVID-19 disease manifestations) should continue as long as feasible, ideally at least one to two years, to assess duration of protection and potential for vaccine-associated ERD as immune responses to the vaccine wane.

- Efficacy trials should include contingency plans for continued follow up and analysis of safety and effectiveness outcomes in the event that a safe and effective vaccine becomes available (e.g., as demonstrated in a planned interim analysis or as demonstrated in another clinical trial). In that case, discussion with the agency may be necessary to address ethical arguments to break the blind and offer vaccine to placebo recipients.

- In cases where statistical equivalency testing of vaccine immune responses in humans is required to support manufacturing consistency (clinical lot-to-lot consistency trial), this testing can be incorporated into the design of an efficacy trial and does not need to be conducted in a separate study.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1274

D. Efficacy Considerations

- Either laboratory-confirmed COVID-19 or laboratory-confirmed SARS-CoV-2 infection is an acceptable primary endpoint for a COVID-19 vaccine efficacy trial.

    - Acute cases of COVID-19 should be virologically confirmed (e.g., by RT-PCR).

    - SARS-CoV-2 infection, including asymptomatic infection, can be monitored for and confirmed either by virologic methods or by serologic methods evaluating antibodies to SARS-CoV-2 antigens not included in the vaccine.

- Standardization of efficacy endpoints across clinical trials may facilitate comparative evaluation of vaccines for deployment programs, provided that such comparisons are not confounded by differences in trial design or study populations. To this end, FDA recommends that either the primary endpoint or a secondary endpoint (with or without formal hypothesis testing) be defined as virologically confirmed SARS-CoV-2 infection with one or more of the following symptoms:

    - Fever or chills
    - Cough
    - Shortness of breath or difficulty breathing
    - Fatigue
    - Muscle or body aches
    - Headache
    - New loss of taste or smell
    - Sore throat
    - Congestion or runny nose
    - Nausea or vomiting
    - Diarrhea

- As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:

    - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, $SpO2 \leq 93\%$ on room air at sea level or $PaO2/FiO2 < 300$ mm Hg)
    - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO)
    - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors)
    - Significant acute renal, hepatic, or neurologic dysfunction

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1275

- Admission to an ICU
- Death

- SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.

- The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

E. Statistical Considerations

- To ensure that a widely deployed COVID-19 vaccine is effective, the primary efficacy endpoint point estimate for a placebo-controlled efficacy trial should be at least 50%, and the statistical success criterion should be that the lower bound of the appropriately alpha-adjusted confidence interval around the primary efficacy endpoint point estimate is >30%.

  - The same statistical success criterion should be used for any interim analysis designed for early detection of efficacy.

  - A lower bound ≤30% but >0% may be acceptable as a statistical success criterion for a secondary efficacy endpoint, provided that secondary endpoint hypothesis testing is dependent on success on the primary endpoint.

- For non-inferiority comparison to a COVID-19 vaccine already proven to be effective, the statistical success criterion should be that the lower bound of the appropriately alpha-adjusted confidence interval around the primary relative efficacy point estimate is >-10%.

- For each vaccine candidate, appropriate statistical methods should be used to control type 1 error for hypothesis testing on multiple endpoints and/or interim efficacy analyses.

- Late phase studies should include interim analyses to assess risk of vaccine-associated ERD (see section F) and futility.

- Study sample sizes and timing of interim analyses should be based on the statistical success criteria for primary and secondary (if applicable) efficacy analyses and realistic, data-driven estimates of vaccine efficacy and incidence of COVID-19 (or SARS-CoV-2 infection) for the populations and locales in which the trial will be conducted.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1276

F. Safety Considerations

- The general safety evaluation of COVID-19 vaccines, including the size of the safety database to support vaccine licensure, should be no different than for other preventive vaccines for infectious diseases. Safety assessments throughout clinical development should include:

  - Solicited local and systemic adverse events for at least 7 days after each study vaccination in an adequate number of study participants to characterize reactogenicity (including at least a subset of participants in late phase efficacy trials).

  - Unsolicited adverse events in all study participants for at least 21–28 days after each study vaccination.

  - Serious and other medically attended adverse events in all study participants for at least 6 months after completion of all study vaccinations. Longer safety monitoring may be warranted for certain vaccine platforms (e.g., those that include novel adjuvants).

  - All pregnancies in study participants for which the date of conception is prior to vaccination or within 30 days after vaccination should be followed for pregnancy outcomes, including pregnancy loss, stillbirth, and congenital anomalies.

- The pre-licensure safety database for preventive vaccines for infectious diseases typically consists of at least 3,000 study participants vaccinated with the dosing regimen intended for licensure. FDA anticipates that adequately powered efficacy trials for COVID-19 vaccines will be of sufficient size to provide an acceptable safety database for each of younger adult and elderly populations, provided that no significant safety concerns arise during clinical development that would warrant further pre-licensure evaluation.

- COVID-19 vaccine trials should periodically monitor for unfavorable imbalances between vaccine and control groups in COVID-19 disease outcomes, in particular for cases of severe COVID-19 that may be a signal for vaccine-associated ERD.

  - Studies should include pre-specified criteria for halting based on signals of potential vaccine-associated ERD.

  - FDA recommends use of an independent data safety monitoring board (DSMB) (Ref. 18) for vaccine-associated ERD and other safety signal monitoring, especially during later stage development.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1277

VI. POST-LICENSURE SAFETY EVALUATION – KEY CONSIDERATIONS

A. General Considerations

- As with all licensed vaccines, there can be limitations in the safety database accrued from the pre-licensure clinical studies of a COVID-19 vaccine. For example:
    - The number of subjects receiving a COVID-19 vaccine in pre-licensure clinical studies may not be adequate to detect some adverse reactions that may occur infrequently.
    - Pre-licensure safety data in some subpopulations likely to receive a COVID-19 vaccine (e.g., pregnant individuals, or individuals with medical comorbidities) may be limited at the time of licensure.
    - For some COVID-19 vaccines, the safety follow-up period to monitor for possible vaccine-associated ERD and other adverse reactions may not have been completed for all subjects enrolled in pre-licensure clinical studies before the vaccine is licensed.

- For COVID-19 vaccines, it is likely that during the early postmarketing period, a large population might be vaccinated in a relatively short timeframe. Thus, FDA recommends early planning of pharmacovigilance activities before licensure.

- To facilitate accurate recording and identification of vaccines in health records, manufacturers should consider establishment of individual Current Procedural Terminology (CPT) codes and the use of bar codes to label the immediate container.

B. Pharmacovigilance Activities for COVID-19 Vaccines

- Routine pharmacovigilance for licensed biological products includes expedited reporting of serious and unexpected adverse events as well as periodic safety reports in accordance with 21 CFR 600.80 (Postmarketing reporting of adverse experiences).

- FDA recommends that at the time of a BLA submission for a COVID-19 vaccine, applicants submit a Pharmacovigilance Plan (PVP) as described in the FDA Guidance for Industry; E2E Pharmacovigilance Planning (Ref. 20). The contents of a PVP for a COVID-19 vaccine will depend on its safety profile and will be based on data, which includes the pre-licensure clinical safety database, preclinical data, and available safety information for related vaccines, among other considerations.

- The PVP should include actions designed to address all important identified risks, important potential risks or important missing information. Pharmacoepidemiologic studies or other actions to evaluate notable potential risks, such as vaccine-associated ERD, should be considered. FDA may recommend one or more of the following as components of a PVP for a COVID-19 vaccine:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1278

- Submission of reports of specific adverse events of interest in an expedited manner beyond routine required reporting;
- Submission of adverse event report summaries at more frequent intervals than specified for routine required reporting;
- Ongoing and/or extended safety follow-up (under an IND) for vaccine-associated ERD of subjects enrolled in pre-licensure clinical studies;
- A pharmacoepidemiologic study to further evaluate (an) important identified or potential risk(s) from the clinical development program, such as vaccine-associated ERD or other uncommon or delayed-onset adverse events of special interest;
- A pregnancy exposure registry that actively collects information on vaccination during pregnancy and associated pregnancy and infant outcomes (Ref. 21).

C. Required Postmarketing Safety Studies

- Section 505(o)(3) of the FD&C Act (21 U.S.C. 355(o)(3)) authorizes FDA to require certain postmarketing studies or clinical trials for prescription drugs approved under section 505(b) of the FD&C Act (21 U.S.C. 355(b)) and biological products approved under section 351 of the PHS Act (42 U.S.C. 262) (Ref. 22). Under section 505(o)(3), FDA can require such studies or trials at the time of approval to assess a known serious risk related to the use of the drug, to assess signals of serious risk related to the use of the drug, or to identify an unexpected serious risk when available data indicate the potential for a serious risk. Under section 505(o)(3), FDA can also require such studies or trials after approval if FDA becomes aware of new safety information, which is defined at section 505-1(b)(3) of the FD&C Act (21 U.S.C. 355-1(b)(3)).

- For COVID-19 vaccines, FDA may require postmarketing studies or trials to assess known or potential serious risks when such studies or trials are warranted.

VII. DIAGNOSTIC AND SEROLOGICAL ASSAYS – KEY CONSIDERATIONS

- Diagnostic assays used to support the pivotal efficacy analysis (e.g., RT-PCR) should be sensitive and accurate for the purpose of confirming infection and should be validated before use.

- Assays used for immunogenicity evaluation should be suitable for their intended purpose of assessing relevant immune responses to vaccination and be validated before use in pivotal clinical trials.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1279

VIII. ADDITIONAL CONSIDERATIONS

A. Additional Considerations in Demonstrating Vaccine Effectiveness

- Given the current state of knowledge about COVID-19, the most direct approach to demonstrate effectiveness for a COVID-19 vaccine candidate is based on clinical endpoint efficacy trials showing protection against disease (see section V. D. above).

- Once additional understanding of SARS-CoV-2 immunology, and specifically vaccine immune responses that might be reasonably likely to predict protection against COVID-19, is acquired, accelerated approval of a COVID-19 vaccine pursuant to section 506 of the FD&C Act (21 U.S.C. 356) and 21 CFR 601.40 may be considered if an applicant provides sufficient data and information to meet the applicable legal requirements. For a COVID-19 vaccine, it may be possible to approve a product under these provisions based on adequate and well-controlled clinical trials establishing an effect of the product on a surrogate endpoint (e.g., immune response) that is reasonably likely to predict clinical benefit.

- A potential surrogate endpoint likely would depend on the characteristics of the vaccine, such as antigen structure, mode of delivery, and antigen processing and presentation in the individual vaccinated. For example, an immune marker established for an adenovirus-based vaccine cannot be presumed applicable to a VSV-based vaccine, given that the two vaccines present antigen in different ways and engender different types of protective immune responses.

- Since SARS-CoV-2 represents a novel pathogen, a surrogate endpoint reasonably likely to predict protection from COVID-19 should ideally be derived from human efficacy studies examining clinical disease endpoints. If the surrogate endpoint is derived from other data sources, sponsors should consult the FDA to reach agreement on the use of the surrogate endpoint.

- An adequate dataset evaluating the safety of the vaccine in humans would need to be provided for consideration of licensure.

- For drugs granted accelerated approval, postmarketing confirmatory trials have been required to verify and describe the predicted effect on clinical benefit. These studies should usually be underway at the time of the accelerated approval, 21 CFR Part 601, Subpart E, and must be completed with due diligence (section 506(c)(3)(A) of the FD&C Act (21 U.S.C. 356(c)(3)(A)) and 21 CFR 601.41).

- If it is no longer possible to demonstrate vaccine effectiveness by way of conducting clinical disease endpoint efficacy studies, the use of a controlled human infection model to obtain evidence to support vaccine efficacy may be considered. However, many issues, including logistical, human subject protection, ethical, and scientific issues, would need to be satisfactorily addressed. At this

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1280

time no controlled human infection models for SARS-CoV-2 have been established or characterized.

B. Emergency Use Authorization

- An Emergency Use Authorization (EUA) may be issued only after several statutory requirements are met (section 564 of the FD&C Act (21 U.S.C. 360bbb-2)) (Ref. 23). Among these requirements is a determination by FDA that the known and potential benefits of a product, when used to diagnose, prevent, or treat serious or life-threatening diseases, outweigh the known and potential risks of the product.

- Issuance of an EUA (Ref. 23) may be appropriate for a COVID-19 vaccine provided the standard for issuing an EUA is met. Issuance of an EUA for a COVID-19 vaccine prior to the completion of large randomized clinical efficacy trials could reduce the ability to demonstrate effectiveness of the investigational vaccine in a clinical disease endpoint efficacy trial to support licensure, and such clinical disease endpoint efficacy trials may be needed to investigate the potential for vaccine-associated ERD. Thus, for a vaccine for which there is adequate manufacturing information, issuance of an EUA may be appropriate once studies have demonstrated the safety and effectiveness of the vaccine but before the manufacturer has submitted and/or FDA has completed its formal review of the biologics license application.

- In the case of investigational vaccines being developed for the prevention of COVID-19, any assessment regarding an EUA would be made on a case by case basis considering the target population, the characteristics of the product, the preclinical and human clinical study data on the product, and the totality of the available scientific evidence relevant to the product.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1284

INSTRUCTIONS ON HOW TO USE THIS CRF

1. Use black ink

All entries must be legible and with a black ballpoint pen.

2. Notes

Only the Investigator and site personnel named in the delegation log may complete CRFs. The Investigator should ensure that he/she signs and dates all completed CRFs to indicate that he/she believes that they are complete and correct.

Check that the data reported on the CRFs, derived from Source Document, is consistent.

If you cannot complete part of the form, write down "Unknown" [UK], "Uncertain" [UC], and "Test Not Done" [TND]. Avoid using the phrase 'Not Applicable' [NA].

Dates should be mentioned as dd/mmm/yyyy and time in 24-hour clock as hh/mm (for e.g. 1.03 pm as 13:03 hrs).

For reasons of confidentiality, the subject's full name should never appear on the CRFs, however the investigator should keep a record of all subjects in the study that identifies the subject's full name and their code number. Enter the subject's initials in the order of 'surname', 'first initial', and 'second initial'. In case of only two initials mark the third box as '__'

Each subject will be assigned a 3-digit screening number in an ascending order. For e.g. first subject screening No. 001, second one will be 002, etc.

The Investigator should comment on and document any significance noted on the CRFs for any laboratory values outside the laboratory's reference range, or some other range agreed with the sponsor to avoid the generation of data queries.

3. Make no erasures

When corrections to entries in the CRF need to be done, the erroneous information must be crossed out with a single line so that the incorrect entry is still readable, the new entry made, and the changes initialed and dated. Do not scribble. On no account, should erasures and correction fluid be used.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1285

4. Resolve or explain all inconsistencies noted in the record

Ensure all data entries in the CRF are clearly written in order to avoid generation of data queries. A note of explanation must be included before dismissing as inaccurate any clinically relevant information noted in the chart or log.

5. Note any omissions

Omitted data should be entered in the next available space with an explanation of the lateness of the entry.

6. Leave no blank spaces

All blank spaces or section of the CRF should have a line drawn through them once the date passes.

7. Sign documents cautiously

No research document should be signed / initialed unless it accurately reflects the clinical situation described. A blank CRF must never be signed. The date of the signature should reflect the date on which the record was reviewed. The signatures and the initials should be the same as that provided in the Site Personnel Signature Log.

8. Additional pages

Add additional pages (e.g. comments page, concomitant medication page etc) wherever applicable and number them as – Page XXa of XX. For e.g. Page 1a of 1

PARTICIPANT INFORMATION SHEET AND INFORMED CONSENT FORM

Protocol Title: An Event-Driven, Phase 3, Randomized, Double-blind, Placebo-controlled, Multicenter Study to Evaluate the Efficacy, Safety, Immunogenicity, and Lot-to-Lot consistency of BBV152, a Whole-virion Inactivated SARS-CoV-2 Vaccine in Adults ≥18 to Years of Age.

.Protocol Number	:	BBIL/BBV152-C/2020
Version & Date	:	Version: 4.0; Dated 18Nov 2020
Sponsor	:	Bharat Biotech International Limited, Hyderabad, Telangana –500078
Study Investigator	:	
Study Site and address	:	
Phone number(s)	:	
Screening Number	:	

This consent form may contain words that you do not understand. Please ask the study doctor or the study staff to explain any words or information that you do not clearly understand. You may take home an unsigned copy of this consent form to think about or discuss with family or friends before making thedecision.

A person who takes part in a research study is called a research or study subject. In this consent form "you" always refers to the research (study) subject.

SUMMARY

You are being asked to participate in a research study. The purpose of this consent form is to help you decide your participation in this study. To be in this study you must provide informed consent. Please read this form carefully. "Informed consent" includes:

- Reading this document or having it read to you,
- Having the study doctor or study staff explain the study to you,
- Asking questions about anything that is not clear, and
- You may take home an unsigned copy of this document if you require time to think about it and to talk to family or friends before you make the decision.

You should not agree to participate in this study until all of your questions are answered satisfactorily.

After reading and discussing the information in this consent form you should know:

- Why this study is being done
- What will happen during the research
- What vaccine or procedures will be used
- Any possible benefits to your participation
- The possible risks to your participation

If you take part in this study, you will be given a copy of this signed and dated consent form.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1321

PURPOSE OF THE STUDY

BBV152 is an investigational COVID-19 vaccine. This study is to know whether the vaccine (BBV152) is producing desired effect (efficacy), safety, and immune response (immunogenicity). The study will recruit individuals until the total number of 130 required subjects are accrued, with a virologically (RT-PCR test positive) confirmed symptomatic cases (i.e. persons who are positive for RT-PCR and are having symptoms of coronavirus disease (COVID-19). After reaching the target number of 130 COVID-19 cases, study will continue to assess only the safety until the study completion.

VOLUNTARY PARTICIPATION AND WITHDRAWAL

Your participation in this study is voluntary. You may decide not to participate in the study or you may leave the study at any time. Your decision will not cause any penalty or loss of benefits to which you are entitled.

The study doctor or the sponsor may stop your participation in this study at any time without your consent for any of the following reasons:

- It is in your best interest;
- You do not later consent to any future changes that may be made in the study plan; or
- For any other reason.

If you leave the study before the planned final visit, you may be asked by the study doctor to have some of the concluding procedures of the study so that we can record your general health condition and reasons for withdrawal.

STUDY PARTICIPATION AND PROCEDURES

A total of 25,800 subjects will be enrolled and randomly assigned equally to receive either BBV152 vaccine OR Placebo (i.e inert substance having no effect). You will be classified into three categories based on the sites where you have been enrolled. The study procedure will be different for each category.

Visit 1 Baseline (Month 0):
You will be checked whether you are eligible for the study based on the medical history and physical examination. If you are eligible (in good general health or stable pre-existing disease as per the discretion of the Principal investigator (doctor who is the main person responsible for conducting the study), blood sample (5 mL) and swab will be collected through nose (Nasopharyngeal swab) prior to vaccination. A study vaccine/placebo will be administered. Following vaccination, you will remain at the study site for at least 30 min of observation to record any immediate side effects.

Visit 2 (Month 1+2 days):
You will return to the OPD for vitals (Temperature, Pulse rate, BP, Respiratory rate, SpO2) physical examination (general and systemic examination), and specific symptoms for coronavirus disease (COVID-19). A study vaccine/placebo will be administered. Following vaccination, you

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1322

will remain at the study site for at least 30 min of observation to record any side effects.

An additional 5 mL blood and nasopharyngeal swabs will be collected from the participants who met the efficacy criteria for future research purpose.

You will be telephonically followed-up from 3rd month to 12 month for safety.

RANDOMIZATION

You will be randomly assigned (1:1 randomization) to receive two doses of either BBV152 vaccine or placebo so that you will have equal chance of receiving either vaccine or placebo. If you have any underlying disease (based on your medical history and physican examination before the administration of vaccine or placebo, you will be randomly assigned to receive either vaccine or placebo based on your disease condition.

DURATION OF THE STUDY

Your participation in the study will be approximately 12 months.

YOUR RESPONSIBILITIES IN THE STUDY

1. You should not participate in any other clinical trial during the study period.
2. Available for clinical follow-up throughout the study period via telephone contact as well as clinic visits.
3. Agree to keep a daily record of symptoms for the duration of the study

Precautions need to be taken for Protect yourself and others from the spread COVID-19:

- Regularly and thoroughly clean your hands with an alcohol-based hand rub or wash them with soap and water.
- Maintain at least 2 meter (6 feet) distance between yourself and others.
- Avoid going to crowded places.
- Avoid touching eyes, nose and mouth.
- Make sure you, and the people around you, follow good respiratory hygiene. This means covering your mouth and nose with your bent elbow or tissue when you cough or sneeze. Then dispose of the used tissue immediately and wash your hands.
- Stay home and self-isolate even with minor symptoms such as cough, headache, mild fever, until you recover. Have someone bring you supplies. If you need to leave your house, wear a mask to avoid infecting others.
- If you have a fever, cough and difficulty breathing, seek medical attention, but call by telephone in advance if possible and follow the directions of your local health authority.
- Keep up to date on the latest information from trusted sources, such as WHO or your local and national health authorities.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1323

WHAT ARE THE RISKS OR DISCOMFORTS OF TAKING PART?

POTENTIAL BENEFITS OF STUDY PARTICIPATION

The target study population for this study is adults with no known history of SARS-CoV-2 infection but whose locations or circumstances put them at high risk of COVID-19. The following benefits may accrue to participants.

- The BBV152 vaccine may be an effective vaccine against COVID-19.
- Contributing to the development of a vaccine against COVID-19, a current pandemic disease.

RISKS FROM STUDY PARTICIPATION

Vaccination with corona virus vaccine, BBV152 is the first ever vaccine used in clinical trials. Based on experiences with other similar vaccines you may experience the following symptoms after vaccination:

- Anaphylaxis
- Pain at injection site
- Redness at injection site
- Swelling at injection site
- Hardness at injection site
- Systemic symptoms like raised temperature or fever, chills, headache, , nausea, , vomiting, weakness, muscle pains and joint pains.

You may experience some pain and/or swelling of your arm from having blood drawn the number of times specified in the study procedures above. Drawing of blood can cause local bruising and reactions at the site of injection such as redness, swelling, and heat sensation.

Previously, a finding of enhanced respiratory disease cases was reported in animal studies SARS-CoV-1 (in 2008). Hence, there may be a concern of enhanced respiratory disease with any BBV152 or any other COVID-19 vaccine.

WHAT WILL HAPPEN IF SOME NEW INFORMATION ABOUT THE VACCINE IS IDENTIFIED

Sometimes during the course of a research project, if new information becomes available about the vaccine, then you will be informed in a timely manner, as it may be relevant. During the study, we may find new medical information about the subject. We will share this with you right away if it is important to your health. We may advise you to do other tests to check this new information.

WHAT ARE BENEFITS & COSTS/PAYMENT FOR PARTICIPATION?

Benefits

By participating in this study, you will learn about Coronavirus (COVID-19) disease and how to prevent it. Your participation in this study will help in generating information about the effect of this novel vaccine and lead the direction for further development of the vaccine so that it can become available to general public. If successful, the vaccine will be able to prevent Coronavirus infection or the symptoms caused by it and will benefit a larger population.

Costs/payment

You will not have to bear any cost for participating in this study nor will you receive any monetary benefit from participating in the study. However, you will be reimbursed towards cost incurred for travel or loss of daily wages by you of XX$ for your participation in the study. Even if you do not complete the study for any reason, you will be reimbursed for each visit which you have completed.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1324

WHAT ARE THE ALTERNATIVE TREATMENTS?

Currently, there are no vaccines commercially available to prevent SARS-COV-2 virus infection or COVID-19 disease.

MAY I WITHDRAW OR REVOKE (CANCEL) CONSENT?

You may withdraw or take away consent to use and disclose your health information at any time without giving any reason. If you withdraw consent, your will not be able to stay in this study further.

When you withdraw consent, no new health information will be gathered after that date. Information that has already been gathered and the samples collected may still be used in the research and given to others.

CONFIDENTIALITY

All the details related to you will be kept confidential. We will use a number instead of your name or other items that could identify you and your family personally on the record. The study doctor, sponsor/agents for the sponsor, regulatory authorities, and the ethics committee at the site may get this information.
Study information collected about you will be given to the sponsor. "Sponsor" means any persons or companies that are working for or with the sponsor, or owned by the sponsor.
It will also be given to the regulatory authorities of India. It may be given to governmental agencies in other countries where the vaccine may be considered for approval. Medical records which identify you and the consent form signed by you may be looked at for research or regulatory purposes.

You should also keep the data confidential and do not disclose any information that may reveal your confidentiality.

Why will this information be used and/or given to others?

- To conduct the research,
- To interpret and analyze the results, and
- To see if the research was done correctly

If the results of this study are made public, information that identifies you will not be used.

COMPENSATION FOR INJURY

If you decide to participate in the study, you will have to undergo all the study procedures explained above and provide the study related information to the study doctor and strictly follow the instructions of study doctors. In the event of any injury that are related to the clinical trial you will be provided free medical care as advised by the study doctor as long as required or till such time it is established that the injury is not related to the clinical trial, whichever is earlier.

In the event of an injury or death that is related to the clinical trial, M/s. Bharat Biotech International Limited, Hyderabad shall provide financial compensation as per applicable guidelines of the national regulatory authority.

You (your nominee or legal heir, as applicable) have the right to contact the Sponsor (Bharat

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1325

Biotech International Ltd. or its representative) for the purpose of making claims in the case of study related injury or death. Contact information for the Sponsor (or its representative) is available with your studydoctor.

As a liability / responsibility of the Sponsor, you will be covered by an insurance policy.

SOURCE OF FUNDING FOR THE STUDY

Bharat Biotech International Limited will fund for the study

WHO SHOULD I CALL IF I HAVE ANY QUESTIONS?

If you have any questions about the study or your participation in it or if you feel that you have had a research related injury or have a bad reaction to the study vaccine, you should contact Dr. _____principal investigator of this study at telephone number _____ or another studystaff.

If you have any questions about the rights you have while taking part in this study, call the Secretary of IEC, Mr/Mrs._____at telephonenumber_____.

Sign the participant informed consent form only if your questions have been answered to your satisfaction.

Questionnaire for Telephonic Follow-up for Suspected COVID-19:

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19		
Was the Participant followed up for COVID-19?	Yes ☐ No ☐	Date of Follow up: D D M M Y Y Y Y

Time of Follow up: (HH:MM): _ _:_ _ (24 hrs format)

Criteria for swab collection:
1. Fever (for >24 hrs) 2. New or increased cough (for >24 hrs) 3. Shortness of breath/Difficulty in breathing (for >24 hrs)
4. Congestion/Runny Nose (for >48hrs)5. Sore throat (for >48hrs)6. Chills (for >48 hrs)7. Myalgia/Fatigue (for >48 hrs)
8. Headache (for >48 hrs) 9. New onset Anosmia/Ageusia (for >48 hrs) 10. Diarrhea (for >48 hrs) 11. Nausea/Vomiting

Were any of the criteria for swab collection met? ☐ Yes ☐ No

If Yes, Inform the PI, and plan for medical management. (Submit -> Notify PI, Sponsor, and CRO)

If yes, Collect the Nasopharyngeal swab, and sent to lab for analysis

Is the Swab submitted for RT-PCR test? ☐ Yes☐No

Swab collection Date (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _ Swab collection Time (HH:MM): _ _:_ _ (24 hrs format)

Results of RT-PCR test:☐Positive ☐Negative

Medical Management as Per PI: ☐ Home quarantine-based treatment ☐ Hospitalization

If No, specify the symptom(s) that did not meet the criteria or any other symptom(s):

Symptom I (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)
Symptom II (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)
Symptom III (Mention the symptom):
Date of symptom onset (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of since onset (HH:MM): _ _:_ _ (24 hrs format)

If the symptom(s) worsen(s), then re-assess for Suspected COVID-19 criteria. If the criteria are met, then, collect the Nasopharyngeal swab, and sent to lab for analysis.

If the participant is symptomatic, Assess for Severe COVID-19 criteria (If Yes, Please Tick if any as applicable)

1. Did the Participant has any symptoms Clinical signs at rest indicative of severe systemic illness? (respiratory rate >30/min, heart rate >125/min, SpO2<93%): **[Yes ☐ No ☐]**
2. Did the participant has Respiratory failure? (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO): **[Yes ☐ No ☐]**
3. Did the Participant have any symptoms general Evidence of shock? (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors: **[Yes ☐ No ☐]**
4.Did the Participant have any symptoms Significant acute renal, hepatic, or neurologic dysfunction?**[Yes ☐ No ☐]**
5.Did the Participant have Admission to an ICU?**[Yes ☐ No ☐]**
6.Mortality: **[Yes ☐ No ☐]**

If the participant is meet the Severe COVID-19 criteria, Assess for VAERD:

1. Oxygen saturation (SpO2) _____%
2. Need for oxygen therapy: [Yes ☐ No ☐]
3. Respiratory Rate: _____breaths/min
4. Need for ventilator support: [Yes ☐ No ☐]
5. Imaging test Report: _____
6. Blood test Report: _____
7. Any other clinical finding(s): _____

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19

Outcome of the Event:

Symptom I (Mention the symptom):
Outcome:☐ Recovered without any sequelae☐ Recovering ☐Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Symptom II (Mention the symptom):
Outcome:☐ Recoveredwithout any sequelae☐ Recovering ☐Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Symptom III (Mention the symptom):
Outcome:☐ Recoveredwithout any sequelae☐ Recovering ☐ Continuing☐ Recovered with Sequelae ☐ Fatal

If recovered, Date of resolution (DD/MMM/YYYY): _ _/_ _ _/_ _ _ _Time of resolution (HH:MM): _ _:_ _ (24 hrs format)

Was the participant hospitalized?☐Yes ☐No

If yes,Date of Hospitalization: _ _/_ _ _/_ _ _ Time of Hospitalization (HH:MM): _ _:_ _ (24 hrs format)

Date of Hospitalization Discharge: _ _/_ _ _/_ _ _ _ Time of Discharge(HH:MM): _ _:_ _ (24 hrs format)

(Attach the Picture or PDF copy of the hospital record and discharge summary)

Note: If the participant was hospitalized, collect the hospital record including RT-PCT test report, and discharge summary. If the participant is hospitalized and not discharged, ensure whether RT-PCR test was done? If not, then request for RT-PCT test.

Was the participant admitted to ICU? ☐Yes ☐No

If yes, Date of ICU admission: _ _/_ _ _/_ _ _ _ Time of ICU admission (HH:MM): _ _:_ _ (24 hrs format)

Was the outcome fatal?☐Yes ☐No

Date of Death: _ _/_ _ _/_ _ _ _ Time of Death (HH:MM): _ _:_ _ (24 hrs format)

Date of Autopsy: _ _/_ _ _/_ _ _ _ Time of Autopsy (HH:MM): _ _:_ _ (24 hrs format)

Autopsy Report (Collected): Yes ☐No☐(Attach Picture or PDF copy)

Description of the event:

TELEPHONIC FOLLOW UP FOR SUSPECTED COVID-19

Treatment for the symptoms as applicable: ☐ Yes ☐ No

Cara Ariadne, boa tarde.

Compartilho protocolo realizado para envio do relatório de validação do método de controle da proteína S1(antígeno) junto ao CBPF.

Informo que a potência foi concluída no sábado e eles estão encerrando a compilação para o relatório final. Informei a ANVISA que como ultrapassamos as 21h aqui, o relatório será protocolado amanhã no primeiro horário.

Gostaria de pedir a gentileza que consultem junto a ANVISA qual o prazo de análise que eles optaram por seguir, se 7 ou 30 dias.

Prezada Emanuela Medrades,

Boa tarde!

A pedido do Coordenador-Geral de Logistica de Insumos Estratégicos para Saúde (CGLOG) venho por meio deste, *mui respeitosamente,* solicitar vossos préstimo quanto ao envio dos documentos elencados na Resolução da Diretoria Colegiada (RDC) 476, de 10 de março de 2021 para que esta coordenação possa solicitar junto a Agencia Nacional de Vigilância Sanitária (ANVISA) o pedido de concessão de excepcionalidade para a importação do objeto disposto no Contrato 52/2021.

Ficamos no aguardo.

Recibo Eletrônico de Protocolo - 1471838

Usuário Externo (signatário):	Ariadne Gisele Muniz Bonvino
IP utilizado:	189.28.128.242
Data e Horário:	31/05/2021 16:42:49
Tipo de Peticionamento:	Intercorrente
Número do Processo:	25351.915151/2021-48

Interessados:

MINISTERIO DA SAUDE/DEPARTAMENTO DE LOGISTICA EM SAUDE-DLOG/CGLOG/DIIMP

Protocolos dos Documentos (Número SEI):

- E-mail Precisa - Documentação Adicional	1471828
- Documento 1 - Clinical Responses ¿ Parte I	1471829
- Documento 2 - Mock Shell Version 1.0	1471830
- Documento 3 - BBV152 SA	1471831
- Documento 4 - Development and Licensure for Cov	1471832
- Documento 5 - Case Report Form ¿ CRF	1471833
- Documento 6 - Diário do Participante	1471834
- Documento 7 - ICD	1471835
- Documento 8 - Questionário FUP Telefone	1471837

O Usuário Externo acima identificado foi previamente avisado que o peticionamento importa na aceitação dos termos e condições que regem o processo eletrônico, além do disposto no credenciamento prévio, e na assinatura dos documentos nato-digitais e declaração de que são autênticos os digitalizados, sendo responsável civil, penal e administrativamente pelo uso indevido. Ainda, foi avisado que os níveis de acesso indicados para os documentos estariam condicionados à análise por servidor público, que poderá alterá-los a qualquer momento sem necessidade de prévio aviso, e de que são de sua exclusiva responsabilidade:

- a conformidade entre os dados informados e os documentos;
- a conservação dos originais em papel de documentos digitalizados até que decaia o direito de revisão dos atos praticados no processo, para que, caso solicitado, sejam apresentados para qualquer tipo de conferência;
- a realização por meio eletrônico de todos os atos e comunicações processuais com o próprio Usuário Externo ou, por seu intermédio, com a entidade porventura representada;
- a observância de que os atos processuais se consideram realizados no dia e hora do recebimento pelo SEI, considerando-se tempestivos os praticados até as 23h59min59s do último dia do prazo, considerado sempre o horário oficial de Brasília, independente do fuso horário em que se encontre;
- a consulta periódica ao SEI, a fim de verificar o recebimento de intimações eletrônicas.

A existência deste Recibo, do processo e dos documentos acima indicados pode ser conferida no Portal na Internet do(a) Agência Nacional de Vigilância Sanitária.

Cara Ariadne, boa tarde.

Compartilho protocolo realizado para envio do relatório de validação do método de controle da proteína S1(antígeno) junto ao CBPF.

Informo que a potência foi concluída no sábado e eles estão encerrando a compilação para o relatório final. Informei a ANVISA que como ultrapassamos as 21h aqui, o relatório será protocolado amanhã no primeiro horário.

Gostaria de pedir a gentileza que consultem junto a ANVISA qual o prazo de análise que eles optaram por seguir, se 7 ou 30 dias.

Fernanda, bom dia.

Em complemento as repostas enviadas ontem, compartilho os dados utilizados para apreciação, sendo:

1. **Collatect_PD_BBV152** – Referente aos desvios de protocolos de menor impacto, com sua descrição e ação corretiva/preventiva.
2. **Subjects_Visits_BBV152_STATUS2_Interim_report** – Fornecida pela equipe responsável pelo IWRS, onde é possível ver os 24.432 participantes que haviam recebido a primeira e segunda dose além de outras informações como screening number, gênero, idade, data de cada uma das visitas e status do participante. (*Enrolled, discontinued, unblided*...)
3. **DAY 42 Positive Cases_FEndpoint** – Informações disponibilizadas pelo IQVIA com os 127 casos de Covid19 Sintomáticos utilizados para o desfecho primário do estudo. No documento é fornecido as seguintes informações:

    - as datas da primeira e segunda dose,
    - data do follow-up de 42 dias,
    - os sintomas informados pelo participante,
    - a data do PCR positivo,

- Quantos dias após primeira e segunda dose,
- Informações clínicas como SpO2, exames de imagem e outros quando aplicável,
- Terapia medicamentosa para tratamento do Covid19, e
- Observação se o mesmo se enquadra no critério de Covid19 grave conforme Guideline do FDA.

Envio novamente o segundo relatório interino de fase 3 o qual essas informações se referem, para facilitar e permanecemos a disposição,

Assunto: Re: Documentação prévia à submissão - Covaxin

Fernanda, boa tarde. Como vai ?

Como estamos tratando mais de um assunto ao mesmo tempo, as informações estão ficando um pouco sobrepostas. Abaixo separei por itens em atual tratativa junto a agência:

- Os documentos que foram enviados nessa pasta do OneDrive são referentes ao processo 25351455725202115 e Expediente Nº 1809912212 realizado no dia 11/05/21 com assunto 11800, para que a ANVISA possa analisar o documento de uma maneira formal. Esse protocolo foi feito para que após a análise de vocês, em a documentação estando de acordo, a Precisa possa dar continuidade no processo de pedido de importação excepcional através do Ministério da Saúde.

- Quanto ao DDCM, pedimos uma reunião junto a CONEP e gostaria de contar com a sua participação, bem como da Brenda e do Francis, para tratarmos das questões apresentadas no termo de compromisso. Hoje estaremos aditando o DDCM para inserir os detalhes das SAEs dos ensaios clínicos, a relação causal, inclusive dos óbitos conforme solicitado.

- E também, para manter todos na mesma página, teremos uma reunião amanhã com a GGFIS onde a BBIL irá apresentar todas as ações atendidas do CAPA para seguirmos com o Peticionamento do CBPF.

Apesar de ter resumido acima cada uma das atividades, iremos nos organizar sempre em e-mails separados para cada um, para uma melhor comunicação.

Permanecemos a disposição,

Emanuela Medrades

Bom dia, Amanda

Vc se refere à documentação do DDCM ou da submissão prévia à importação? Os links eram os mesmos?
Só para estarmos na mesma página, o que queríamos era que a empresa informasse qual documento enviado na submissão prévia à importação seria diferente ou com novas informações em comparação com o que foi encaminhado no DDCM.
Foi isso que a empresa disponibilizou?

Atenciosamente,

1. INTRODUCTION

The outbreak of the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2/COVID-19) has, as on March 05th,2021, spread to over 216 countries across the globe, with a total of ~115 Million confirmed cases and ~ 2.5 Million deaths. The number of reported SARS-CoV-2 cases in India is also on an increase with ~11 Million confirmed cases and ~157000 deaths(1). Coronaviruses are a severe threat to the humans and other animals, earlier other members of the same family coronaviridae, SARS-CoV infected ~8000 people with a death rate of 10% and another member Middle East Respiratory Syndrome (MERS) virus was outbroken in the Middle East region and infected ~2000 people with 35% fatality rate(2) . Porcine epidemic diarrhea coronavirus (PEDV) has swept throughout the United States of America, causing an almost 100% fatality rate in piglets and wiping out more than 10% of America's pig population in less than a year(2).

Coronaviruses are the enveloped positive-stranded RNA viruses which have the largest genome among all RNA viruses with approximately 27 to 32 kb2. The viral genome is packed inside a helical capsid formed by the nucleocapsid protein (N) which is surrounded by an envelope. SARS-CoV viral envelope is associated with at least three structural proteins: The membrane protein (M) and the envelope protein (E) are involved in virus assembly, whereas the spike protein (S) mediates virus entry into host cells. Among these structural proteins, the spike forms large protrusions from the virus surface, giving coronaviruses the appearance of having crowns(2).

The SARS-CoV-2 virus transmits from person to person mainly through respiratory droplets(3).
The inhaled virus SARS-CoV-2 likely binds to epithelial cells in the nasal cavity and starts replicating. ACE2 is the main receptor for both SARS-CoV-2 and SARS-CoV(4,5). There is local propagation of the virus but a limited innate immune response. At this stage, the virus can be detected by nasal swabs. Although the viral burden may be low, these individuals are infectious. The RT-PCR value for the viral RNA might be useful to predict the viral load and the subsequent infectivity and clinical course. The virus propagates and migrates down the respiratory tract along the conducting airways, and a more robust innate immune response is triggered. Nasal swabs or sputum should yield the virus (SARS-CoV-2) as well as early markers of the innate immune response(6). The symptoms of SARS-CoV-2 infection appear after an incubation period of ~5 days(7). The period from the onset of SARS-CoV-2 symptoms to death ranged from 6 to 41 days with a median of 14 days. This period is dependent on the age of the patient and the status of the patient's immune system. It was shorter among patients >70 years old compared with those under the age of 70(8). The most common symptoms at the onset of SARS-CoV-2 illness are fever, cough, and fatigue, while other symptoms include sputum production, headache, hemoptysis, diarrhea, dyspnoea, and lymphopenia(9).

Till date, no specific treatment was recommended for SARS-CoV-2 infection hence, vaccines are a critical new tool in the battle against COVID-19. Various types of COVID-19 vaccines, such as DNA, RNA- based formulations, Recombinant subunit vaccines containing the viral protein (Spike) epitopes, vector based formulations (eg: Adeno virus) and traditional inactivated vaccines were developed(10–12). Bharat Biotech Int. Ltd., India has developed a whole-virion inactivated Covid-19 vaccine and evaluated for its safety and immunogenicity in a Phase 1 followed by phase 2 study and found that vaccine is safe and immunogenic(13,14). Bharat Biotech has been conducting a phase 3 efficacy study in 25,800 participants to evaluate the efficacy of the vaccine.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1365

2. STUDY DESIGN

The study is an endpoint-driven randomized, double-blind, phase 3 study to evaluate the Efficacy, Safety, and Immunogenicity of BBV152B, a Whole-Virion Inactivated SARS-CoV-2 Vaccine in Volunteers aged 18 years and above.

A total of 25,800 subjects were enrolled across India in 25 sites (3 Categories) and randomized in a 1:1 ratio to receive BBV152B vaccine and control. All participants will be assessed for efficacy and safety endpoints and provide a NP swab and blood sample before the first dose of IP. The NP swab and blood collected will be subject to RT-PCR and Anti-SARS-CoV-2 IgG antibodies. The results of this will not affect enrolment of the participant. Participants who are found to be positive for either RT-PCR or Anti-SARS-CoV-2 IgG antibodies will be excluded from the primary efficacy analysis.

The additional 5,000 participants in the Brazil Arm will be recruited from the Month of June 2021.

The purpose of this Phase 3 study is to evaluate the protective efficacy, safety, and immunogenicity of the whole-virion inactivated SARS-CoV-2 vaccine, BBV152B. The Phase 3 study will follow randomized study participants for efficacy until virologically confirmed (RT-PCR positive) symptomatic COVID-19 participants will be eligible for the primary efficacy analysis. After reaching the target number (n=130) of symptomatic COVID-19 cases, the study will continue to assess safety until the completion of the study duration.

Case Definition of symptomatic COVID-19

The study is designed to accrue 130 symptomatic COVID-19 cases.This includes any participant who meets any of the two below following criteria:

• Case Definition for Primary Efficacy Symptomatic Endpoint

• Case Definition for Severe Symptomatic COVID-19

Any one of the below mentioned criteria (A or B) must be met, along with a positive SARS-CoV-2 RT-PCR confirmation to be a confirmed symptomatic case

Criteria A: One or More		**Criteria B: Two or More**
1. Shortness of Breath/Difficulty in Breathing 2. New onset Anosmia/Aguesia 3. Oxygen saturation of <94% or escalation by requiring supplemental Oxygen. 4. Pneumonia: diagnosed by chest X ray or CT scan 5. Evidence of Shock **6.** ICU Admission/Death	or	1. Fever 2. Chills 3. New cough 4. Myalgia/Fatigue 5. Headache 6. Sore throat 7. Nausea/Vomiting 8. Diarrhea 9. Congestion/ Runny Nose
	AND	
Positive SARS-CoV-2 RT-PCR test		

Case Definition of symptomatic COVID-19 (Severe)

Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following clinical manifestations:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1366

1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%)
2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO)
3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors)
4. Significant acute renal, hepatic, or neurologic dysfunction
5. Admission to an ICU
6. Death

This definition is according to the US FDA Guidance document (https://www.fda.gov/media/139638/download).

SITE CATEGORIES:

Category 1 (Symptomatic): In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15 day intervals.

Category 2 (Symptomatic/Asymptomatic): In addition to administering the IP, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

Category 3 (Symptomatic/Asymptomatic+Immunogenicity): In addition to administering the IP, repeated NP swabs for asymptomatic, a series of blood samples will be collected for analyzing serum for immunological assessments.

3. STUDY POPULATION

As per the approved protocol, a total of 25,800 subjects were enrolled and received either vaccine or placebo in 1:1 ratio. Among these 25,800 participants 24,455 were received second dose and detailed site wise enrolled participants, second dose recipients and the participants who were followed up till Day 42 were listed in the Table 1.

3.1 AT-RISK POPULATION

In this study both healthy volunteers and participants with high risk for Covid-19 who is, either ≥ 60 years of age or < 60 years of age with co-morbid conditions, and HCPs were recruited.

Participants who are < 60 years old will be categorized as at risk for severe COVID-19 illness if they have at least 1 of the following risk factors at Screening:

- Stable chronic lung disease (eg, emphysema and chronic bronchitis), idiopathic pulmonary fibrosis and cystic fibrosis) or mild to moderate asthma.
- Stable cardiac disease (eg, heart failure, coronary artery disease, congenital heart disease, cardiomyopathies, hypertension, and pulmonary hypertension).
- Severe obesity (body mass index ≥ 35 kg/m2).
- Controlled Diabetes (Type 1, Type 2).
- Stable Liver disease.

Participants who has high risk for Covid-19 were summarized in the Table 2 (>60 Years) and Table 3 (< 60 with Co-morbid condition).

TABLE 2: SUMMARY OF AT RISK PARTICIPANTS

3.2 GENDER AND AGEWISE CLASSIFICATION OF THE PARTICIPANTS:

In the study both the genders were recruited, among 25800 participants 17332 (67.2%) were male and 8468 (32.8%) were female participants. Detailed description of the participants categorized by their age and gender was depicted in the Table 4.

TABLE 4: GENDERAND AGE WISE CLASSIFICATION OF THE PARTICIPANTS

Gender	≥18 to <50	≥51 to <60	≥60 to above

4. SAFETY

There are 25,800 participants were recruited in the study. It is decided to consider all AEs reported till 11 am (IST) March 1, 2021 for first 8000 enrolled participants. All the participants were followed up telephonically for 7 days after each dose of vaccination and reported all the solicited AEs. Unsolicited AEs from all the participants were reported throughout follow-up period (Till Day 42). A total of 655 adverse events were reported and equally distributed in both vaccine and placebo groups. Among these 655 AEs 605 were mild, 34 were moderate and 16 were severe and the severity of the AEs is similar in both the groups. All the AEs except 20 were resolved without sequelae. Detailed AEs list is summarized in the Table 6.

TABLE 6: SUMMARY OF ADVERSE EVENTS

Description	Treatment Arm		
	BBV152 (N=4,061) n (%)	**Placebo (N=3,804) n (%)**	**Total (N=7,865) n (%)**

Severe	9 (0.22)	7 (0.18)	16 (0.20)

4.1 SERIOUS ADVERSE EVENTS

All the participants (25800) were followed up for serious adverse events (SAEs) and 70 SAEs were reported till 7th April 202, and among those cases 48 were resolved, 14 cases are ongoing and 7 deaths were reported. All the SAEs were not related to the vaccine and distributed equally among the two treatment groups. Detailed description of the SAEs is given in the Table 7.

5. IMMUNOGENICITY

The Immunogenicity assessment was planned on the subset of the 600 participants who were recruited in the category 3 sites. All the blood samples from these participants were collected on Day 0, Day 28, Day 56 and these samples are being analysed. The immunogenicity data in terms geometric mean titers (GMTs) by neutralizing antibody, S-protein, and RBD specific anti-IgG binding titer will be submitted to CDSCO and will be available by June 15th, 2021.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1376

6. EFFICACY (INTERIM ANALYSIS)

We are considering first 127 RT-PCR (2/3 of 130 as proposed in 2nd interim analysis) positive events and analysis has been done by taking data confirmed by sites. Participants who received two doses and not having PD (protocol deviation) are considered in efficacy population. The second interim analysis is based on 127 events, of which 104 events of COVID-19 were observed in the placebo group versus 23 events observed in the BBV152 (COVAXIN®) group, resulting in a point estimate of vaccine efficacy of 77.9%.

The initial second interim efficacy was planned to be triggered after accruing 87 events. However, due to the recent surge in India (Second Wave – April, 2021), the study accrued 127 events rapidly and were presented to the DSMB.

TABLE 7: EFFICACY of BBV152

Description	**Treatment Arm**		
	BBV152 (N = 12219)	**Placebo (N=12198)**	**Total (N =24417)**
First occurrence of Virologically confirmed (RT-PCR) n (%)	23 (0.188)	104 (0.853)	127 (0.520)
VE (%)	77.9		
98.78% CI	[60.8, 88.4]		
p value	<0.0001		

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1377

Among these 127 cases, we have assessed the efficacy of the BBV152 vaccine against severe COVID-19 cases and found to be 100% efficacious.

TABLE 8: Efficacy Analysis of Secondary Endpoint Severe Cases

Description	Treatment Arm		
	BBV152 (N=12219)	**Placebo (N=12198)**	**Total (N=24417)**
First occurrence of Virologically confirmed (RT-PCR), n (%)	0(0.000)	9 (0.074)	9 (0.037)
VE Point Estimate	**1.000**		
90% CI	**[0.605, 1.000]**		

Data available in Interim CSR (Available by June 30th, 2021)

1. Complete Statistical Report (25,800 participants):
    A. Solicited/Unsolicited/Serious AE's till 2-months post dose-2
    B. Efficacy of 130 Symptomatic Events
    C. Asymptomatic Efficacy from 36 events
    D. Efficacy against variants of concern
        i. Variants such as B.1.617 and 1.1.7

7. CONCLUSIONS

Phase 3 study was conducted to evaluate the efficacy and safety of the COVAXIN® vaccine. A total of 25800 participants were recruited, among these 67.2% were males and 32.8% were females. At-risk population, ages≥60 years (9.4%), participants (<60 Years) with co-morbid conditions (16.7%) were enrolled. COVID-19 seroprevalence was assessed among these 25800 participants at baseline and results reported that 34.3% of the participants were Seropositive.

All the participants were followed up for their safety, 70 SAEs were reported and among these 48 were resolved, 14 were ongoing and 8 deaths were reported. Among 25800 participants first 8000 enrolled participants AEs were recorded. A total of 655 AEs was reported and most of them were mild in severity. All the reported SAEs were not related to the vaccine.

COVAXIN® vaccine efficacy was assessed based on the 127 accrued COVID-19 cases and reported that the vaccine efficacy is 78%.

ACTION PLAN EVALUATION REPORT

COMPETENT HEALTH AUTHORITY
Identification of the Competent Health Authority: ANVISA - National Health Surveillance Agency
Chief Inspector: Andrea Renata Cornelio Geyer

Address of the Health Agency: Industry and Supply Sector (SIA) - Section 5, Special Area 57.
City: Brasilia

Status (UF): Federal District
Mobile: 71205-050

INSPECTED ESTABLISHMENT

Company Reason: Bharat Biotech International Limited

Address: Sy No 230, 231 & 235, Genome Valley, Turkapally, Shamirpet Mandal, Medchal – Malkajgiri District – 500 078 Telangana.

City: Hyderabad
Country: India

INSPECTION DATA

Inspection start date: 01/03/2021

Closing date of the inspection: 05/03/2021

NON-CONFORMITIES CRITICAL

NON-CONFORMITIES CRITICAL found in the inspection: 3
Critical Non-Compliance1
The specifications have not been established in accordance with the requirements of the ICH Q6B (Specifications: Test Procedures and Acceptance Criteria for Biotechnological/Biological Products), in disagreement with article IV of Art. 131 of RDC 301/2019. It has been verified that the specifications of the finished biological product do not include methods for its biological activity or quantification of viral antigen, as well as impurities derived from process, such as host cell proteins (HCP) and neomycin used in culture media, as provided for in ICH Q6B. The formulation of the vaccine is carried out only by the quantification of total protein(non-specific method), which does not guarantee that the dose of the vaccine is consistent, as there is also no quantification of host cell protein (HCP) and it has not been shown that the host cell purification is consistent (no suitability tests of the chromatography, resins are not controlled for the time of use, it is not performed efficiency test of the tangential filtration membrane, among other deficiencies).

Article infringed on non-compliance: 131

Standard infringed on non-compliance: RDC 301/2019 **NC was categorized according to**: Decision-making tree
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Prohibition of the batch(s) of the product(s) and/or material(is)
Production line manufacturing suspension

Proposed Corrective or Preventive Action Plan:

The company argues that the Covaxin vaccine potency test would be the combination of different methods, such as total viral protein content by the Lowry method, identification of s1 protein by the qualitative ELISA method (already validated) and the estimation of protein S1 by the direct Method of ELISA (not yet validated), protein purity by SDS -PAGE. The specificity of protein S1 was evaluated with based on Western Blot, the morphological structure of the inactivated virus was evaluated by electron microscopy and there was also quantification of protein impurities not specific - residual Content of BSA, host cell protein content residual, residual trypsin content - in addition to residual DNA content. After evaluating the whole combination of methods and results during product development, clinical lots and commercial batches were released considering the protein content total viral by lowry method. Currently, the role of many of the other proteins (Protein N, Protein M, Protein E, Protein S) is under evaluation, therefore, BBIL adapted the quantification of total viral protein by the lowry as a power test.

According to the company, the total viral protein quantification approach by the lowry as a power test was correct and was proven based on data from immunogenicity obtained during pre-clinical studies conducted in animals (mice, mice, rabbits, hamsters and non-human primates). Because it is a vaccine, the correlation between immunological protection for SARS- CoV-2 has not yet been defined, then the dose formulation was designed based on protein quantification total viral by Lowry method. Power by Lowry method is an accepted method release of vaccines such as inactivated Japanese Encephalitis Vaccine (Humana, which is listed inWHOTRS963Annex1.Because of this, the company informs that adapted the quantification of total viral protein by the Lowry Method as a power.

Also, according to the company, the total viral protein content by Lowry's method, was evaluated in pre clinical and clinical phase I/II/III clinical studies. immunogenicity obtained in Phase I and Phase II are comparable with sera convalescent human patients and the results for immunogenicity have been published in the reviewed journal (Lancet Infectious Diseases). According to the report phase III clinical study the vaccine showed efficacy of 81%.

In the case of the company's considerations, the inspector team emphasizes that the Lowry is nonspecific and does not inform whether the proteins are in their correct three-dimensional structure, there fore exhibiting biological activity; or if proteins denatured. Especially at this early point of a new product, is which is still characterizing the vaccine, it is not possible to draw up a direct relationship in that all protein would be equivalent to the S1 antigen; in fact, there may be other proteins in quantities not yet known, such as other proteins sars-cov-2, the trypsin reagent, Vero cell HCP and Vero proteins culture medium.

In this way, the power would not be given by the combination of different methods, such as BBIL'S argument in its Action Plan; in fact, the data from biological potency/activity will be providedbybioassayssuchastheimmunogenicityinmiceorbythequantitativeELISAmethod, as this demonstrates the maintenance of the structures responsible for their activity in Biological. The other methods mentioned help to construer the totality of information product quality, considering other parameters such as HCP and DNA residual for purity.

The company concludes that existing test parameters support that the product is immunogenic and effective, however, presented the following actions planned in the CAPA/QCV/21001 for completion on 07/30/2021:

1)The potency method (biological activity) will be developed and validated. The product release specification (DP) will be reviewed by incorporating the Power.

(2) The power specification shall be established on the basis of 30 batch data. Regarding the host cell protein (HCP) test, the company informs that the method has been validated and the DS batches are being analyzed as additional testing informational, and the data have shown consistency. The company presents the validation analytical method and proposes to include the HCP test in the release specification DS, with a deadline of30/07/2021.

For neomycin, the company justifies that neomycin is used during the cell expansion at the concentration of 50 µg/mL and that during the process there are several washing, clarification and purification steps, then the content of neomycin would be reduced to strokes in DS and the concentration in the final product would be below the Detected. However, the company informs that it will include the neomycin test in the neomycin release specification, also as part of CAPA/QCV/2100130/07/2021.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

Analyzing the company's claims, we found that the reference cited, the WHO TRS 963 Annex 1 (Recommendations for Japanese encephalitis vaccine (inactivated) for human use), actually suggests the analysis of total protein content by the method of Lowry in the RELEASE step of the IFA (p. 87). However, on the same page, there is the the need to also perform the antigen content test, this test that the company has not implemented either for the IFA or for the finished product. About the test the document recommends that the power test be tested or in the bulk of the IFA (p.89) or in the finished product (p.92), in addition to carrying out the protein test (p. 91). In this way, the inspector team understands that if the company performs the total protein content and antigen content test in IFA and power test and protein content in the finished product, the control strategy would be adequate for the product. However, this action is planned for completion only in 30/07/2021, making it impossible at the moment to ensure batch consistency to lot of the potency and concentration of the product. As for the other questions of this (HCP, Neomycin, among others), the approach used by the company is appropriate, however the forecast of implementation of the tests is too long acceptance of the action plan.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/07/2021
BBIL Response Dated 29/03/2021:
BBIL is re looked in to the initially proposed time lines, according to the ANVISA comments the revised timelines activity wise i.e. method development, specification for drug product and drug substance and method validation.
Once the method is developed, an additional specification will be prepared for drug product by capturing the Potency test (Biological activity) and in drug substance specification by capturing the i) S1 antigen estimation by ELISA, ii) HCP and iii) Neomycin. Once the methods ready, will start testing the batches and the certificate of analysis can be issued accordingly. The method validations shall be continued parallel and will update ANVISA once the validation report is available.
Drug Product:

Action Plan	Initial committed date	Revised target date	Remarks
1. Potency test (Biological activity) method development	30thJul 2021	15th Apr 2021	NA
2. Preparation of potency specification & STP for ANVISA	30thJul 2021	15th Apr 2021	# CC/QCV/21006

3. Analytical Method validation	30th Jul 2021	30th May 2021	# CC/QCV/21003

Drug Substance:

Action Plan	Initial committed date	Revised target date	Remarks
1. S1 antigen estimation by ELISA method development	30th Jul 2021	15th Apr 2021	NA

6. Neomycin test method verification	30th Jul 2021	30th May 2021	

Critical Non-Compliance 2

The viral inactivation process was not adequately validated, in disagreement with the Art. 76 of IN36/2019.The REPORT PVR/376/21/03adoptedon05/01/2021describesthevalidationofthe manufacturing process together with viral inactivation. Viral inactivation evaluated in only 3 batches,usingaqualitative-onlyanalyticalmethodthatisnotvalidated,without guarantee that the method has the appropriate sensitivity to detect the presence of the active virus, in non- observance of Art.94.in47/2019.Validationalsodidnotcheckthemaximumpreparationtime of the inactivating agent betapropiolactone (BPL),which is not stable at room temperature since its removal from the freezer until its addition to the culture medium and beginning of the inactivation process. The viral inactivation has not been tested in the worstcase situations (maximum preparation time inactivating solution, maximum temperature allowed, agitation, etc.), as the critical process parameters are also not defined. The viral inactivation, which is crucial in the production of an inactivated vaccine. The kineticines (CDI or KOI) should be fully understood, and, for ensure complete virus inactivation, testing for inactivation efficiency should be validated and well characterized for sensitivity and robustness. Cdi will be different by virus and inactivation method, therefore, to ensure the safety of bulk vaccine inactivated, the inactivation process should be extensively studied, in which it is observation of a reproducible CDI is essential. Viral inactivation is directly related to the nature of the virus, the initial concentration of BPL, temperature and composition of the solution during inactivation. It is essential to understand the kinetics of inactivation by BPL to ensure the complete safety of the vaccine, as the viral inactivation are not linear and may exhibit a phenomenon called the "viral factor tail": a reduction in the rate of inactivation during treatment due to the fall in concentration of BPL at the time logo, which is caused by the reaction of this agent with the virus, water or the components of the medium, which reduces the rate of inactivation with the time1.Therefore,consideringthatarobustandconsistentprocessofinactivationviraliscrucial to product safety this non-compliance is considered critical.

Article infringed on non-compliance: 76

Standard infringed on non-compliance: IN 36/2019
NC was categorized according to: Decision-making tree

STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):

Prohibition of the batch(s) of the product(s) and/ or material(is)
Production line manufacturing suspension

Proposed Corrective or Preventive Action Plan:

The company again argued that it developed and validated its inactivation kinetics based on a compendialCPEmethodandreferencedinaWHOdocumentandVATorviralamplificationtest, with high sensitivity to demonstrate amount of below very low detection levels. This method is already validated in house rabies viruses and Japanese encephalopathy and were extrapolated toSARS-CoV-2.In this sense,theobservationremainsthatthetestisnotyetvalidatedcovid-19 vaccine; additionally, the VAT method is qualitative, generates the result dichotomous type "present/absent virus", providing information on the absence of of residual infecting particles and on the viral safety of the product as a whole, However, because it is not quantitative, it does not characterize the kinetics of inactivation over the treatment with BPL, under the specific conditions of the manufacturing process.

In addition, the bibliography cited by the company itself (WHOTRS980/2014Annex2), describes method in cell culture, employing detection of EPC, but for polio virus titration in the oral vaccine. CAPAs include inactivation kineticsstudywithquantitativemethodfor30/05/21;study of time out of refrigeration (TOR)ofTheBPLalsofor30/05/21;Andcppsestimatedfor7/30/21.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

Although the company uses the qualitative test for IFA release, this test should be Validated. Even though it is a test based on official compendiums, it is described for vaccines, so validation ratleastthesuitabilityofthemethodshouldbebedemonstrated.In addition,to evaluate the kinetics of inactivation, the method should be validated or have its suitability verified. So far there is no evidence demonstrating that the behavior of SARS-CoV-2 is identical to the polio myelitis and Japanese encephalitis, nor if there is any component of the formula that could interfere with the test.

Monitoring Strategy: Documentary evaluation.
Planned Date: 30/05/21 and 30/07/21.
BBIL Response Dated 29/03/2021:
BBIL re looked in to the initially proposed time lines, according to the ANVISA comments the revised time lines are as follows,

Action Plan	Initial committed date	Revised target date	Remarks
1. CPE method development	NA	NA	Completed
2. Preparation of inactivation kinetics protocol	NA	NA	Completed
3. Execution of inactivation kinetics study	30th May 2021	30th Apr 2021	NA
4. CPE method validation	30th May 2021	30th Apr 2021	NA
5. VIT and VAT method development	NA	NA	Completed
6. VIT and VAT method validation	30th Apr 2021	30th Apr 2021	NA

The Inactivation Kinetics study protocol # SP/37/21/01 is prepared and attached as **Annexure-26**

Critical Non-Compliance 3

In the PQ3 area, the company does not have adequate measures to avoid the risk of a contamination of products already treated with the inactivating agent by items not yet and the sequence of operations and equipment do not guarantee the contact of the inactivating agent with all surfaces exposed to viral culture, in disagreement with articles 77 and 78 of IN36/2019. In the PQ3 manufacturing area, all activities, from the culture in bio reactor until the sterilizing filtration of the IFA, are performed in the same room.

The BB/DW/PQ3/005.00 waste diagram was not up-to-date, reflecting the current situation of manufacture of the Covaxin vaccine. The operator did not respect the flow of personnel diagram BB/DW/PQ3/005.00, entering and exiting through the same antechamber to search for the logbooks at should be next to the equipment in the area. The drawing of the process did not consider the contact of all contact surfaces with the agent inactivating, as there is no transfer to a second container. Considering the absence of adequate manufacturing records, that the validationofthemanufacturingprocessviralinactivationwasalsonotperformedappropriately as described in the CN Critical 2, and that the method for checking viral inactivation is not validated,thisisnotcompliancewillbeclassifiedascriticalinaccordancewithPOP-O-SNVS-014 (combination of different non-conformities which together can be explained by as a critical situation for the product, as they generate or lead to a significant risk to manufacture a product that is dangerous to patients.

Article infringed on non-compliance: 77

Standard infringed on non-compliance: IN 36/2019
NC was categorized according to: Decision-making tree
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):

Prohibition of the batch(s) of the product(s) and/or material (is)
Production line manufacturing suspension

Proposed Corrective or Preventive Action Plan:

Thecompanyinformsthatalloperationscarriedoutintheareaareclosedandcarriedoutfixed, washed and sterilized transfer lines prior to use by means of on-site cleaning and sterilization system (CIP/SIP). The preparation of viral seed is performed in insulator and subsequently all subsequent steps are closed.

Considering these measures, the company claims that SARS-CoV-2 could be manufactured in BSL 2+ area.

A change control was initiated (CC/PQ3/21002) to review the waste stream of the area. The draft version of the flow was presented. The deadline proposed in the for implementation is 30/03/2021.

The company also informs that the employee kept the logbooks in the antechamber for and therefore was reported the IR/PQ3/21003 incident that resulted in the retraining PQ3 area operators in the correct personnel flow and maintenance of logbooks with the respective equipment/areas.

With regard to the process in the PQ3 area, the company proposes to ensure the contact of all the

contact surfaces with the inactivating agent using the additional standby tank (PQ3-HRV-

003) as inactivation tank 2. The transfer to this tank will be after 16 hours of inactivation by means of a flexible transfer line. Was CC/PQ3/21003 change control started on 03/17/2021, according to the informed in the plan the expected completion of this action is 04/30/2021.

In addition, the company informs that the IFA production process will be re validated after the validation of out standing analytical methods; use of the second inactivation tank to ensure that all surfaces come into contact with the inactivating agent in the PQ3 area; small-scale study of chromatographic resin reuse; Rationalization cpps and CQAs; and review of SOPs and BMR. These actions are planned to finalize on30/07/2021.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

No immediate corrective action to mitigate the risks was taken by the company. The most important action to ensure total inactivation of the virus (transfer to a container, ensuring that all surfaces come into contact with the solution) is scheduled for completion on 30/04/2021.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/04/2021
BBIL Response Dated 29/03/2021:
As an immediate corrective action, it is decided to implement an additional harvest hold vessel for Inactivation step in PQ3 facility. A Change control (# CC/PQ3/21003) was initiated to implement the proposed actions to connect the existing harvest hold vessels (ID PQ3-HRV-001 & ID PQ3-HRV-002) for inactivation 1 for 16 h. with additional harvest hold vessel (ID: PQ3-HRV-003) through a flexible transfer line for inactivation 2 for 16 to 32 h. The respective batch records will be revised and implemented.
The lay out was revised to indicate the transfer line between the existing vessel vessels (ID PQ3-HRV-001 & ID PQ3-HRV-002) and additional vessel (ID: PQ3-HRV-003) is attached as **Annexure-27.**
MAJOR NON-CONFORMITIES

MAJOR NON-CONFORMITIES found on inspection: 12
Non-Compliance Major 1
Not all analytical methods are validated, in disagreement with item III of art.14ofrdc301/2019. It has been found that several methods are not yet for Covaxin®, such as the quantification of theS1antigen by ELISA, the content of the 2-phenoxyethanolpreservativebyRP-HPLC, Method AMVP/37/06-Corona Virus Amplification Test (VAT)eAMVO/37/07–Corona Virus Inactivation Test (VIT). In addition, partial validation of compendial is methods is incomplete, as does not provide for the evaluation of the parameters accuracy and accuracy, as provided in the QCC/009 rev 3 of 03/07/2020, which does not comply with Articles 7 and 8 of RDC166/2017.

Article infringed on non-compliance: 14

Standard infringed on non-compliance: RDC 301/2019
NC was categorized as: Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014:** 187
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Prohibition of the batch(s) of the product(s) and/or material(is)
Product manufacturing suspension

Proposed Corrective or Preventive Action Plan:

The action plan confirmed that the following analytical methods will still be validated: s1protein content by ELISA, quantitative CPE titration, VAT, VIT, aluminum, residual DNA, 2- phenoxy ethanol by HPLC and power for DS and DP. The forecast validation of analytical methods is 30/06/2021.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The deadline for finalizing the action is 30/06/2021 and non-compliance would imply the standardized sanitary suspension of product manufacturing and interdiction of batches manufactured so far.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/06/2021.
BBIL Response Dated 29/03/2021:
BBIL re looked in to the initially proposed time lines, according to the ANVISA comments the revised time lines are as follows,

Action Plan	Initial committed date	Revised target date	Remarks
1. Quantitative estimation of S1 protein content by ELISA	30th Jun 2021	30th May 2021	NA
2. Quantitative CPE titration	30th Jun 2021	30th Apr 2021	NA
3. VIT and VAT method validation	30th Jun 2021	30th Apr 2021	NA
4. Aluminum content	30th Jun 2021	30th Apr 2021	NA
5. Residual DNA content	30th Jun 2021	30th Apr 2021	NA
6. 2-Phenoxyethanol preservative by RP-HPLC methods for COVAXIN.	30th Jun 2021	30th Apr 2021	NA

Major Non-Compliance 2

The filtration time, pressure and flow are not validated for all filters used, that are not adequately identified and monitored during routine production, disagreement with IN35/2019, Art.154. The company also failed to demonstrate that filters used in the sterilization of the IFA bulk and the solutions used in the formulation of do not affect the product, either by removing its ingredients or by adding other substances, indisagreementwithArticle158ofIN35/2019.It was not possible to identify the filtration parameters (pressure, flow and filtration time) used in the validation of the filtering, making it apparent that they were not challenged. There is no indication of the filter catalogue numbers used in the tests, preventing the identification the exact filter that is validated for each step of the process. The Merck filter® (Identified only by the brand) was not included in the bacterial challenge and is only mentioned in the validation in the filtration processes related to the formulation of the finished product. The PALL filter® (Identified by brand only) was only indicated in the validation of the solutions in the finished product. During the review of the manufacturing record of lot 37621010A, it has been verified that the catalog number filtering differs from validated. Routine filtration parameters also are not registered in the batch manufacturing record. In addition, the company does not have study of extractable considering the process filters for the Covaxin vaccine. Informs that is in the process of being run by the filter provider. It has no analysis of risk to justify this absence.

Article infringed on non-compliance: 154 and 158
Standard infringed on non-compliance: IN 35/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014**: 137
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Product manufacturing suspension

Proposed Corrective or Preventive Action Plan:

BBIL acknowledges the observations on the validation of sterilizing filtration. The company indicates that the validation protocol will be revised to include the critical parameters of (CPP), such as filtration time, filtration pressure and filtration rate for calculate Critical Quality Attributes (FCA) as bacterial retention and filter compatibility. As part of this study, the details of the filters used, including an indication of the catalogue number of filters used in the

validation and those will be used in a routine period, as well as the description of this in the manufacturing records of the according to the validated data. The batch documents will be reviewed for filtering parameters and indicating the types of filters used. Furthermore, the company undertakes to include in the batch manufacturing records only the filters validated. For extractive and leachable studies, the company indicates that it has already been initiated, in accordance with protocol VSI-21943-01, approved by BBIL and Sartorius®, supplier of filters.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The action plan, when executed, has the capacity to mitigate the NC, but for completion of the action is 30/05/2021. There was also no risk assessment and comparison with other company processes to demonstrate that the risk is in line with the acceptable level.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/05/2021
BBIL Response Dated 29/03/2021:
BBIL would like to clarify that, the risk assessment # RAR/PA1P/21/008 was carried out to evaluate the risk associated with usage of sterilizing grade filters without validation for the leachable in the filtration of bulk and 2 PE in PBS used for the formulation. The risk assessment report # RAR/PA1P/21/008 is attached as **Annexure-28.**
Major Non-Compliance 3

Evidence of approval from each supplier/material is not available, in disagreement with §2,Art. 179 of RDC 301/2019. The qualification of suppliers of the Trypsin material, for the supplier Life Technologies, was not adequate. The qualification was held for several manufacturing sites, but the company only received the initial samples to a single manufacturing site. The quality questionnaire was answered by the supplier and cites 3 manufacturing sites, but the company presented a list of manufacturing sites from the same supplier (life Technologies) with6possible manufacturing addresses. The same observations have been identified for the Sigma Aldrich supplier of 2-phenoxy-ethanol, with impossibility of presenting the documentation for all excipient manufacturing sites. The qualification is confusing and was not carried out considering each material for each manufacturing site, that is, the company qualified, in the cases of 2- phenoxy-ethanol and trypsin, for corporations, automatically approving all manufacturing sites of these companies, which is not appropriate.

Article infringed on non-compliance: 179

Standard infringed on non-compliance: RDC 301/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014 NC number listed in Annex I to POP-O-SNVS-014: 203
STANDARDIZED HEALTH ACTION(POP-O-SNVS-014):
No Standardized Sanitary Action

Proposed Corrective or Preventive Action Plan:

The company acknowledges the deficiencies indicated. There are no SOP#QAS/021 statements qualification of each material supplier. The company proposes to review of the procedure to make it clear that each material/supplier should be evaluated individually. Change control CC/QAS/21006 has been initiated and the completion of the measure is on 30 May 2021. Corrective action is acceptable.

NC Rating: SAI (No Action Indicated) **Monitoring Strategy:** Documentary Assessment **Planned Date:**
May 30,2021
Major Non-Compliance 4

The manufacturer did not present a technical-scientific rationale based on the premises of the quality risk management to justify and substantiate critical parameters (PCC or CPP) and critical quality attributes (ACQ or CQA), in accordance with the provisions of IN47/2019 articles 50 and 67, as verified in the avaixo evidence:

(a) during the review of the protocol and the validation report of the formulation of the Covaxin vaccine and the set of data and information associated with aos 03 lotes (ref. PVP/37G/21/02 & PVR/37G/21/02 Process validation report of Whole Virion, inactivated Corona virus vaccine), constatou -se que os CQA e CPP identified were neither justified nor substantiated, and yet the concluded that the process was reproducible, consistent. They have not yet been evidence on the process validation of the adjuvant system has been submitted used in the Covaxin vaccine.

b) During the evaluation of the process validation of the sterile if a bulk of the vaccine Covaxin (PROTOCOL PVP/376/20/03 of 10/19/2020 - Process Validation Protocol for Manufacturing of Whole Virion Inactivated Corona Virus Bulk at PS2 Facility and corresponding report PVR/376/21/03adoptedon05/01/2021)was found that there is no clear and rational definition ofcriticalprocessparametersandcriticalqualityattributes.Several process parameters are not and critical attributes such as biological activity, antigen quantification, and impurities (HCP, neomycin) were not evaluated.

c) Process Validation Protocol PVP/376/21/01 approved on 11/01/2021 (Process Validation Protocol for manufacturing of Whole Virion Inactivated Corona Virus Bulk (PQ3) NLT 20L), referringtothevalidationofthemanufacturingprocessoftheifainthePQ3area, also does not present a clear and rational definition of the critical process parameters and critical quality attributes.

Article infringed on non-compliance: 50

STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
No Standardized Sanitary Action

Proposed Corrective or Preventive Action Plan:

BBIL acknowledges the observation, and informs that SOP # QAS /026 (Title: Preparation, approval and execution of Process Validation, study protocols and report) should be reviewed to include that a risk assessment needs to be carried out in a identification of CPPs and CQAs, according to CAPA/QAS/21001.

(A)Thecorrectivepropositionmaybeconsideredacceptableandfeasibletotheextentthatthe dispositive actions for adequacy included the revision of the SOP procedure # QAS/026 Preparation, approval and Execution of Process Validation, study protocols and report a perspective of inclusion of risk management tool (Ref. 3.2 rationale) for the rationale and justification of the CPP and CQS identified in the formulation stage.

Also as part of the implementation of the proposed CAPA (CAPA/QAS/21001) initiated in 17.03.2021 and expected to end on 07.30.2021, the protocol of process validation on the scale of 250L as per PVP/37F/21/02 rev.00 of 13.03.2021 Protocol for process validation of whole virion, inactivated corona virus vaccine 5.0mL PA1 batch size 250L (Annex 09). Under that Protocol, the statement of reasons selection of PPCs and COD and associated risk analysis was completed as reference cited RAR/PVP/37F/21/02 and its annex-3 (Page 06 of 29) With regard to the validation process of the manufacture of the adjuvant system, the change control #CC/PA1/21005 for the execution of validation exercises. However, the certification of the full adequacy and successful implementation of capa should be formally submitted in a documentary manner via conclusive reports for the assessment of technical relevance and consistency in the face of regulatory requirements in Force.

B/C) With respect to the IFA manufacturing process, the company informs that it will be re validated after:

(a) validation of outstanding analytical methods;

(b) use of a second inactivation tank to ensure that all surfaces come into contact with the inactivating agent in the PQ3 area;

*Small-scale study of chromatographic resin reuse;
c) Rationalization of CPPs and CQAs;

d) Review of SOPs and BMRs

This action is scheduled for completion on 30/07/2021.

NC Rating: SAI (No Action Indicated) **Monitoring**
Strategy: Documentary Assessment **Planned**
Date:30/07/2021
Major Non-Compliance 5
Batch manufacturing records are not carried out and completed whenever a batch action is carried out and in such a way as to allow all significant activities relating to the manufacture of medicinal products are traceable, in disagreement with Articles 124 and 137 RDC 301/2019, as evidenced below:

(a) gaps and absence of signatures have been verified in the completion of the bmr 40A21007A batch processing record, whichwasnotwrittenbycontemporarywaytotheimplementationof the stage of the process and in disagreement with the data integrity concepts of ALCOA+ principles in order to ensure that security and integrity of the data. During the tour in the production areas in the March 2nd at Ed. PA1, there was no double verification, signature and time gap in filling the

calculation of ingredients (sheet08/33) which was made the day before,

i.e. March 1.

(b) The IFA manufacturing record does not include: the lot number of the working cells and viral seed used and the respective number of bottles; instructions for adding sterile bovine fetal serum to the bioreactor and its respective registration; traceability of the collection and incubation conditions of control cells; cell culture parameters (pH, agitation, oxygen dissolved, etc.); identification of all equipment used in the process; time of removal of the beta- propiolactone vial from the freezer; recording of the cycles sterilization of inactivation tanks; the inactivation temperature only is recorded at the beginning of the process; the number of cycles already used in the chromatography; chromatogram; column and system suitability tests tangential filtration; sterilizing filtration parameters;

c) During the revision of the manufacturing record of lot 37621010A was not registered the supplier of the sterilizing filter used and the master record allows them to be filters from suppliers Sartorius®,Merck®and Pall®,mean while the validation was only performed with filter from the supplier Sartorius®; the filtration parameters (pressure, flow, time) are not recorded; the number of registered catalog is different from that used in the validation of sterilizing filtration;the filtered volume was not recorded, although there was a field for such registration; ItwasrecordedthatwereusedinthepackagingofIFAbottlesofpolypropyleneof20L,however it has been reported that only bottles are used 2L; the number of bottles obtained is not recorded.

d) The records of use of chromatography and filtration equipment of the PQ3 area were not present in the area where the activities were being carried out. The operator went to get the record books in the the area's entrance chamber, not complying with the defined personnel flow.

Article infringed on non-compliance: 124 **Standard infringed on non-compliance**: 301/2019 **Nc was categorized as**: Annex I ofPOP-O-SNVS-014
NC number listed in Annex I to POP-O-SNVS-014: 152

STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Precautionary prohibition of the batch(s) of the product(s) and/or material(is)

Proposed Corrective or Preventive Action Plan:

A) To correct the note related to data integrity failure noisily as to the absence of completion andregistrationofrelevantinformationatthetimeoftheperformanceoftheactioncompeting for the lack of reliability and contemporaneity input data and consequent failure to support informed decisions, the manufacturer opened deviation report#IR/PA/21011whoserootcause attributable was related to error human rights and also revisited its internal integrity policy procedures for human dados SOP QAO/003Good documentation practicese QAS/PLY/023Data integrity policy retraining employees in order to follow the principles and concepts of culture to meet alcoa+elements.

Also, as part of the dispositive actions, the manufacturer stated that it would be strengthening supervision actions at the shop floor level in order to avoid recurrences of the Future. action is included as finalized in the Action Plan.

B) The company justifies that,as COVAXIN is a newly developed product and still remains in the

clinical phase, is in a process to address all the gaps and has carried out the assessment of gaps in the batch record, which was presented during the inspection.

As corrective action,the bioprocess batch record will be reviewed by incorporating all the gaps. To avoid similar gaps in batch records, the respective PCPO should be revised to incorporate significant activities to be captured in the registry of the lot. Once all the gaps are addressed, the manufacturing process of the IFA must be revalidated through a process validation protocol. CAPA / PS2 / 21001 was started on 17/03/2021 and the proposed deadline for implementation is 30/04/2021 for the review of the BMR, 30/06/2021 for review of SOPs and 30/07/2021 for process validation.

C) With regard to the sterilizing filtration parameters, the company informs that the respective batch documents will be reviewed to incorporate the parameters of filtration (pressure, flow, time). The batch records will be reviewed to incorporate the filter catalog number used in the process. The company is committed to only validated filters and that the IFA packaging in polypropylene vials of size and the number will be mentioned in the BMR. The proposed deadline for this action is30/05/2021.

D) The company informs that it has interviewed the employee in question and has realised that the respective equipment registration books were placed in the antechamber room by mistake. Incident # IR/PQ3/21003 was initiated on 03/09/2021 for the said discrepancy and the employees involved in the PQ3 area were retrained in the SOP-PQ3/003 (movement of people and materials) and keep the registration books next to the equipment/area.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The deadline for finalizing the action is 30/05/2021 and non-compliance would imply the standard sanitary interdiction of the lots manufactured so far.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/07/2021

BBIL Response Dated 29/03/2021:

A. The proposed actions were completed. The concerned personnel were retrained on SOP # QAO/003 “Good documentation practices” and # QAS/PLY/023 “Data integrity policy”. The Incident and training documents are shared in initial CAPA response. Refer **Annexure-10**

Initial timeline for the revision of BMR	Revised timeline for the Revision of BMR	Remarks
30/05/2021	15/04/2021	The BMR will be revised by incorporating all the identified gaps and batches will be executed with revised batch records from 15/04/2021

B. As per Change Control # CC/PS2/21004, the identified gaps in the BMRs were incorporated and will be effective from 15/04/2021. Column efficiency parameters, column matrix lot number, make and TFF cassette suitability test were also incorporated in the BMR.

Filter catalogue number, make and only the validated filter has been incorporated in the BMR.
PP bottle capacity, number and final volume recording provision also incorporated in the BMR.
The change control # CC/PS2/21004 is attached as **Annexure-29.**
C. The proposed actions were completed. Concerned personnel were retrained on respective SOP. The Incident and training documents are shared in initial CAPA response. Refer **Annexure-05**

Major Non-Compliance 6

The company does not comply with premises and requirements of aseptic technique and aseptic behavior in order to maintain the sterility of the materials/products near the aseptic core in disagreement with the provisions of IN 35/2019 Art.101.

During the observation of aseptic behavior and aseptic operator technique in the Covaxin 37F21014A (Ed. PA1) was checked aseptic manipulation improper when taking samples for checking the volume bottled in contrary to the provisions of item 8.3.10 of the PDG/072 REV02 procedure of 01.05.2020 (Good Clean room Behavior) que enfatizava “Keeping the parts of entire body out of the path of laminar flow in order to avoid turbulence when working in under LAF unit particularly when handling open product, container and closer”.

Article infringed on non-compliance: 101

Standard infringed on non-compliance: IN 35/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014**: 288
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Production line manufacturing suspension

Proposed Corrective or Preventive Action Plan:

To remedy and correct blatant procedural manipulation failures, movement, management and behavior observed during the activities of in the PA1 building, the manufacturer opened a deviation report #IR/PA1/21010 and instituted corrective action (CAPA #PA1/21001 17.03.2021_ref. FORM FMQAS/004/001.03) retraining personnel in the PDG/072_Bom in areas Clean. Another dis positive action was initiated in order to avoid the recurrence of inappropriate practices of aseptic behaviour that incur the risk of contamination, i.e., revision of the PA1/037_Operação and cleaning of the fill machine to incorporate the test into the volume verification process bottled out in the filler cabinet, thereby eliminating breaks and breaks of laminarity of the air and mitigating the risks of contamination due to aseptic techniques Unacceptable.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The action has the potential to correct the NC but has not yet been executed. This is a action that needs to be effectively completed to avoid risk of contamination to the lots of the medicine. **Monitoring Strategy**: Documentary Assessment

Planned Date: 30/04/2021

BBIL Response Dated 29/03/2021:
BBIL would like to update that, as a corrective action plan, the concerned personnel were retrained on SOP # PGD/072 (Good clean room behaviour) on 09/03/2021.
To prevent the non conformities, it is proposed to revise the SOP # PA1/037 vide # CAPA/PA1/21001.
BBIL has initiated a change control # CC/PA1/21006 dated 20/03/2021 and approved on 26/03/2021.
Accordingly, the SOP # PA1/037 revised. The SOP is effective from 27/03/2021. The approved SOP is attached as **Annexure-30.**

Major Non-Compliance 7

The manufacturer has not approved a protocol for the classification of the conditions of carriage of the Covaxin vaccine for the Brazilian territory in order to establish the procedures recording and monitoring of temperature data and consequent assurance that the conditions of embarkation (modal, approach, navigation route) do not affect negatively affect the vaccine when transported according to routine shipping practice (india-brazil transport route profile qualification) at odds with IN 47/2019 Chapter 3, Section VI (Articles84-88).

Article infringed on non-compliance: 84-88 **Standard infringed on non-compliance:** IN 47/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014
NC number listed in Annex I to POP-O-SNVS-014: 209

STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
No Standardized Sanitary Action.

Proposed Corrective or Preventive Action Plan:

The company informs that the product will be transported in refrigerated container, previously qualified, and that the complete transport chain will be qualified in a manner that Competitor. A risk assessment will be prepared to check all possible gaps in the process to cover all possible situations in the protocol. It indicates that all shipments will be monitored with data loggers and will only be released after checking temperature records. Indicates that cold chain validation will be made on the first shipment. However, the validation protocol for transport routes to be used. Deadline - 1stshipment.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The company did not present the protocol with the study design and also did not define the exact route of transport. The execution of the evaluation on the first submission is possible, however, it is necessary for the company to present the detailed study protocol, defining the route and method of transport for the item to be evaluated. The plan is incomplete.

Monitoring Strategy: Documentary Assessment
Planned Date: N.A.
BBIL Response Dated 29/03/2021:
BBIL initiated a CAPA # CAPA/PSD/21001 for preparation of study protocol, defining the route and methods of transportation for the drug product to be shipped to Brazil, validation of refrigerated container and temperature route profile qualification. The CAPA is attached as **Annexure-31**.

Major Non-Compliance 8

The company approved relevant GMP changes regarding the extent of the frequency of requalification of critical equipment, autoclave PRD-A-AUT-489, without a request formal change control and corresponding risk assessment, in disagreement with the to IN 47 Art. 123 and 124. During the documentary evaluation of the requalification report of the rqr/PA1/AUT/489/21/00 it was detected that the company approved the extension of the requalification, from semi-annual to bi-annual, of the autoclave ("QA-SAS assessment report for extension of autoclave periodic qualification frequency" de 06.01.2021"), used to sterilize the butyl caps("load 03") of the Covaxin vaccine.

Furthermore, the sterilization process has not been validated at least annually, in accordance with Art. 116 of IN 35/2019.

Article infringed on non-compliance: 123 and 124
Standard infringed on non-compliance: IN 47/2019 **NC**
was categorized as: Annex I of POP-O-SNVS-014 **NC**
number listed in Annex I to POP-O-SNVS-014: 229
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
(+) Prohibition of the batch(s) of the product(s) and/or material(is)
Product manufacturing suspension

Proposed Corrective or Preventive Action Plan:

In response to this note, the manufacturer expressed its maintenance of the annual frequency(ref. SOP#SAS/015 & validation master plan)from thermal requalification (HD & HP study)and bio-challenge of autoclave AUT loads 489 in order to demonstrate a SAL ≥ 10-6. To this end, the requalification protocols for autoclaves should be reviewed to address this system as proposed by #CAPA/SAS/21004 (ref. Form. n. FMQAS/005/001.01) which was started on 17.03.2021 implementation and completion period on 04.30.2021.

Therefore, the company's action is considered acceptable and this non-conformity addressed appropriately and in alignment with regulatory devices in Force.

NC Classification: AVI (Voluntary Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015
Major Non-Compliance 9

The quality contract concluded between BBIL and Precisa does not describe the role and responsibilities relevant to the evaluation, decision-making, dissemination of information and implementation of risk reduction actions relating to a product in disagreement with the provisions of RDC 301/2019, Art. 322. During the review of the collection procedure in conjunction as the contact (LFI-87/Precisa/QA/2021 page 5 of 7) it was found that it does not address in a contractual clause the way to contact those responsible in each party for the managementofqualitydeviationsandcollectionissuesandneithertherequirementsminimum requirements relating to the requirement on the part of the Precise communication to the competent health authorities and consumers.

Article infringed on non-compliance: 322

Standard infringed on non-compliance: RDC 301/2019 **NC**
was categorized as: Annex I of POP-O-SNVS-014 **NC**
number listed in Annex I to POP-O-SNVS-014: 113
STANDARDIZED HEALTH ACTION(POP-O-SNVS-014):
No Standardized Sanitary Action.

Proposed Corrective or Preventive Action Plan:

Infact,thequalityagreementdeliveredonthepenultimatedayoftheinspection(it is important to note that this NC had been on the first day of the inspection) however during the review it was verified that in the item 14 (14. Recall page 5 of 7), for example, there is no mention of the responsibilities of Precisa as a registration-holding company (manufacturers or importers), on the communication to the competent health authorities and consumers in collection situations in their different risk classifications.

In response to this note, the parties undertook to incorporate the regulatory requirements and organizational arrangements in terms of responsibilities in the management of a possible collection ensuring that the obligations of the consistent with the quality systems of the signatory parties. The expectation review of the said will take place on 30.04.2021.

Therefore, the company's proposition is considered reasonable and that it is not acceptable approached. The definitive contract should be submitted for consideration.

NC Rating: SAI (No Action Indicated) **Monitoring**
Strategy: Documentary Assessment **Planned**
Date:30/04/2021
Non-Compliance Major10

The company did not elaborate a strategy to control chromatography resins. No criteria for acceptance,operatingconditionsandservicelifeoftheresinsaredefined,indisagreement with Article 79 of IN 36/2019. The control of endotoxins and biocharge was only evaluated during cleaning validation.Noevaluationconsideringtheeffectofreuseonthecontrolofendoxinsand biocharge is established. There is no packaging record of the column, containing traceability of the batch number of the resin used. The number of cycles of the columns is not recorded. The criteria for acceptance and operating conditions are not established, registered and validated.

Article infringed on non-compliance: 79

Standard infringed on non-compliance: IN 36/2019
NC was categorized according to: Decision-making tree
Proposed Corrective or Preventive Action Plan:

The company acknowledges the observation and informs that the strategies for controlling chromatographic columns should be implemented. Thus, the respective SOPs and BMRs should be reviewed through the change control scheduled for 04/30/2021.

The acceptance criteria for chromatographic resins should be established through a protocol and once the limits have been established, the suitability of the will be checked before the start of each batch. The company also argues that the procedure for using the column includes neutralization, balancing, loading of sample, column washing and elution and finally, sanitization ofthecolumnusingNaOH0.5Mtosanitizethecolumnaftereachrun,which is sufficient for the removal of endotoxins and biocharge to an acceptable level that has been proven by means of cleaning validation.

Thecompanyconcludesbystatingthatthesegapswillbeconsideredaspartoftherevalidation of the IFA process, scheduled for30/07/2021.

NC Classification: AOD (Determined Official Action)

Justification for the Adoption of AOD:

Beyond the deadline for resolving non-compliance is too long to mitigation of risk, the justification given for not performing the assessment of endotoxins and biocharge along the reuse of chromatographic resin is not acceptable. The company must prove that the sanitization process is reproducible throughout the reuse of the resin.

Monitoring Strategy: Documentary Assessment
Planned Date:30/07/2021
BBIL Response Dated 29/03/2021:

Initial timeline for the revision of BMR	Revised timeline for the Revision of BMR	Remarks
30/05/2021	15/04/2021	The BMR will be revised by incorporating all the identified gaps and batches will be executed with revised batch records from 15/04/2021

The chromatography column control strategies such as asymmetry and HETP were incorporated in the SOP # PS2/087 log book format. During every batch these parameter shall be verified and recorded in the respective log book. The SOP # PS2/087 will be effective from 15/04/2021. The Authorized SOP is attached as **Annexure-32.**

BBIL would like to state that, every batch the column wash samples shall be collected and sent to QC for analysis to prove the sanitization process is reproducible throughout the reuse of the resin. The same is incorporated in the BMR. The BMR will be effective from 15/04/2021. The change control is attached as **Annexure-29.**

Major Non-Compliance 11

The bioload is not monitored prior to sterilizing IFA filtration, in disagreement with or Art. 108 from IN 35/2019.

Article infringed on non-compliance: 108

Standard infringed on non-compliance: IN 35/2019 **NC was categorized as**: Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014:** 290
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Production line manufacturing suspension

Proposed Corrective or Preventive Action Plan:

The company acknowledges the observation and informs that the biocharge will be established for the IFA before sterilizing filtration. The action is scheduled for 30/06/2021, as CAPA/PS2/21001 started on 17/03/2021.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The deadline for completion of the action (30/06/2021) is too long to mitigate the associated risks and non-compliance would imply a standardized health action of suspension of manufacture (import in this case, considering that it is a product annex I of POP-O-SNVS-014.

Monitoring Strategy: Documentary Assessment
Planned Date:30/06/2021
BBIL Response Dated 29/03/2021:

Initial timeline for the revision of BMR	Revised timeline for the Revision of BMR	Remarks
30/05/2021	15/04/2021	The BMR will be revised by incorporating all the identified gaps and batches will be executed with revised batch records from 15/04/2021

BBIL initiated a Change Control # CC/PS2/21004 for the revision of BMR to incorporate the Bio burden verification step before sterile filtration of DS. The BMR is revised and will be effective from 15/04/2021. The change control is attached as **Annexure-29.**

Major Non-Compliance12

Critical process operational parameters, or other parameters that affect the quality of the product, have not been identified, validated, documented and there is no record that they are kept within the requirements during routine manufacturing, in disagreement with Art. 67 of IN 36/2019. The company did not evaluate, during the validation of IFA process in the PS2 area (protocol PVP/376/20/03 of 10/19/2020 and report PVR/376/21/03 approved on 05/01/2021), the ability of the process to remove process-related impurities (DNA, BSA, HCP, betapropiolactone, neomycin and components of the culture medium). The volume of flushing of the membrane and the final volume of the batch are not set. The process validation protocol forthe areaPQ3(PVP/376/21/01of11/01/2021) had the same deficiencies of drawing that the PS2 area protocol and had already been executed, although there was no report completed at the time of inspection.

Article infringed on non-compliance: 67

Standard infringed on non-compliance: IN 36/2019 **NC was categorized as**: Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014**: 137
STANDARDIZED HEALTH ACTION (POP-O-SNVS-014):
Product manufacturing suspension

Proposed Corrective or Preventive Action Plan:

With regard to the elimination of impurities, the company informs that according to the process validation #PVP/37/20/001 and PVP/37/21/001, process impurities (bacterial endotoxin,residual DNA content, residual BSA content, protein residual host cell, residual trypsin content), except neomycin were evaluated in the post-chromatography phase. The result so fall impurities in the process within the predetermined acceptance criterion. Therefore, there is no impact on the lots produced/used to date.

The protocols mentioned (PVP/37/20/001 and PVP/37/21/001) were not inspection, nor together with the action plan. The protocol presented during the inspection and certification process (PVP/376/20/03) describes only the bio load and total protein analysis in the post chromatography stage.

To demonstrate the efficiency of the chromatography column, the company proposes that impurities mentioned above are tested in the pre- and post-chromatography stage by 10 batches and the results will be evaluated. In routine manufacturing post chromatographic tests will be carried out to monitor impurities.

The revalidation of the process will be carried out through a "Protocol for The Validation of process" to evaluate and demonstrate the reduction of impurities (such as cell DNA host, host cell protein, residual BSA content, residual content of trypsin, residual neomycin and BET) during the manufacture of IFA. The characterization will be presented demonstrating the reduction of such impurities.

These activities are scheduled for completion on 07/30/2021.

The company also proposes to include by 30/05/2021 the HCP test in the specification of IFA release and process validation protocol, and by 30/06/2021 include also the neomycin test in the IFA specification.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The deadline for completion of the action (30/06/2021) is too long to mitigate the associated risks and non-compliance would imply a standardized health action of suspension of manufacture (import in this case, considering that it is a product annex I of POP-O-SNVS-014.

Monitoring Strategy: Documentary Assessment
Planned Date: 30/07/2021
BBIL Response Dated 29/03/2021:
BBIL will prepare a separate protocol to demonstrate chromatography column efficiency, all the impurities will be tested at pre and post chromatography for 10 batches and results will be evaluated. The study protocol # SP/37/21/02 is prepared and attached as **Annexure-33.**

Action Plan	Initial committed date	Revised target date	Remarks
1. Preparation of study protocol	30th Jul 2021	NA	Completed
2. Execution of study	30th Jul 2021	30th May 2021	# CAPA/PS2/21001
3. Report preparation	30th Jul 2021	30th May 2021	# CAPA/PS2/21001

However, post chromatography, the impurity profile was estimated for every batch and upon satisfactory results of impurities only the bulk is released for further formulation and filling activities. Hence there is no impact on product quality.

Action Plan for DS	Initial committed date	Revised target date	Remarks
1. HCP test addition in the DS specification	30th May 2021	15th Apr 2021	# CC/QCV/21005
2. Neomycin test addition in the DS specification	30th Jun 2021	15th Apr 2021

There are deficiencies in continuous process verification (CPV) being used during the product life cycle to support its validated state, as well as its due documentation as part of the Quality Review, in disagreement with art. 82 of the IN 47/2019. As evidence, it has been verified that cpv calculations and spreadsheets are based on only in the parameters generated by machines and dislikes the other results of controls in process and release. Following the decision tree of POP-O-SNVS-014, this NC was classified as minor and without sanitary actions.

Article infringed on non-compliance: 82

Standard infringed on non-compliance: IN 47/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

Following the CAPA/QAS/21001of03/17/21, the POP QAS/030 ("On going Process Monitoring") will undergo review and will include all quantifiable parameters in the CpK analysis and trends. **NC Rating:** SAI (No Action Indicated)

Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS- 015

Minor Non-Compliance 3

The logbooks are not filled out properly by not allowing registration in chronological order of the activities performed and their traceability. In addition, verified that certain record books were not present in the area where the equipment is located, in disagreement with Article 150 of RDC 301/2019. Were the following evidence has been verified:

a) Os logbooks FMQAO/042/001.02 (“Opening and Closing of LN2 QAD-LNR-001”) e FMQAO/042/001-02 (“Opening and Closing of LN2 QAD-LNR-003") were filled with blank alternating lines.

b) The use/stock logbook of the Freezer Id. STR-D-DFR-011 has the latest registration on November 10, 2020, on page 4, the lines remain in white to page 25. Logbook return indication saton01December2020.Page001 of the book has no records or any information because it is blank.After the last record, therowsremainwithoutinformationaboutdisuseoftheremaining lines/pages.

(c) logbooksfortheuseofchromatographyandfiltrationequipmentPQ3areawerenotpresent in the area,theoperatorwenttogetthelogbooksintheinboundchamberofthemanufacturing area.

d) The records books of use of chromatography and filtration equipment of the PQ3 area were not present in the area where the activities were being carried out.

Article infringed on non-compliance: 150

Standard infringed on non-compliance: RDC 301/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

a) The IR/QAO/21005 incident was opened. Based on the assessment of the incident, it was concluded that the root cause was human error. All other logbooks have been checked and no other discrepancies were observed. To avoid non-conformities all of the personnel involved were retrained in Good Practices of SOP documentation # QAO /003.

b) Open the INCIDENT IR/STD/21003 to identify the cause of the occurrences. The cause detected was unintentional human error. Activity frequencies have been revised and were satisfactory. The item was satisfactorily completed.

c/d) An interview was conducted with the official involved, who revealed that he had record books in the antechamber by mistake. The IR/PQ3/21003 incident was reported to discrepancy

and pq3 area employees were retrained in the PcOS # PQ3/003 (movement of personnel and materials) and to keep the registration books in the equipment and areas.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS- 015

Minor Non-Compliance 4

Documents related to the Quality Management System were verified in disagreement with Article 121 of RDC 301/2019, according to evidence Below:

a)TheBB/DW/PA1/036.00diagramsadoptedon30/01/2020andBB/DW/PQ3/020.01approved on 11/02/2020 do not describe that the Pure steam U1H-PSG-001 can be used as source of the distribution system PA1 and PS2areas.

(b) The POPQCC/022procedure,effective31July2020,of retention samples, indicates attached the quantity of vials that must be be retained for each presentation of the manufactured vaccines, but the Annex does not describes the amount of samples and storage conditions of the COVAXIN, carrying the procedure is incomplete/outdated.

(c) The waste diagram BB/DW/PQ3/005.00 was not up-to-date reflecting the current manufacturing situation of the Covaxin vaccine.

Article infringed on non-compliance: 121

Standard infringed on non-compliance: 301/2019
NC was categorized as: Annex I of POP-O-SNVS-014

NC number listed in Annex I to POP-O-SNVS-014: 127 and 248

Proposed Corrective or Preventive Action Plan:
a)Change control CC/EMD/21006wasinitiatedfortherevisionofthe(BB/DW/PQ3/020.01and BB/DW/PA1/036.00) and update the interconnection between the pure steam distribution system in building H and the PA1 and PQ3 facilities. Was draft of the revised diagrams is presented. The company informs that to prevent such events in the future, the SOP EMD/231 (Title: Preparation, issue and control of diagrams) will be revised to include the identification and updating of diagrams impacted in the event of any installation/utility renewal such as part of the change control. Change control # CC/EMD/21005 has been started and the deadline is 30/04/2021.

(b) The company assessed that there was no impact as the retention samples of the Covaxin were normally collectedandinthequantitiesrequiredforthesamplesretention. The retention inventoryworksheethasbeendisplayedconfirmingthatthesewerecollected.The SOPQCC/022 procedure will be reviewed with the inclusion of the Covaxin in the list of samples needed for Covaxin. Expected completion date:30/04/2021.

c) A change control has been initiated (CC/PQ3/21002) to review the flow of waste from the area. The draft version of the flow was presented. The proposed deadline implementation is 30/03/2021.

Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015

Non-Compliance Minor 5

The utilities responsible for providing oxygen and carbon dioxide used in the production of the active substance have not been qualified and are not monitored periodically, in disagreement with Art. 72 of RDC 69/2014. The company uses cylinders received from a third party supplier. The qualification of the systems was not carried out distribution of gases and filters of this system used for tank operation in manufacturing step of the biological IFA. The company also doesnotmonitortheloadmicrobialandnon-viablecountoftheseutilitiesduringroutine(after the filter inline).

Article infringed on non-compliance: 72

Standard infringed on non-compliance: RDC 69/2014
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

Open incident IR/SAS/21011. The root cause has been identified. The company concluded that when defining the qualification requirements, both utilities were not Identified. The company indicates that the distribution lines are evaluated at the time of the the reactors that use them. The O2 and CO2 cylinders are received with certificate of analyses that are reviewed prior to use. Also, there is filter 0.22 micrometers at the points of use. Thus, the company concluded that there is no impact on quality.Theactionexpectedcorrectivewasthequalificationofutilities for biocharge and non-viable particles.

SOP SAS/015 has been revised to include O2 and CO2 use points for qualification according to CAPA/SAS/21003. Completion scheduled for April 30, 2021.

How filters at points of use are evaluated for their routine integrity factory, it is possible to acceptthescheduleforttheexecutionofthequalificationsinceitalsoutilitieshavedirectcontact with the product prior tosterilization.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015

Non-Compliance Minor 6

The 2-phenoxy-ethanol excipient classified as category III is not controlled accordance with Art. 182 of RDC 301/2019. The company does not performed on site auditing on all 2-phenoxy- ethanol suppliers. Risk analysis carried out by the company concluded that this material should be audited onsite due to classified as category III, as it is present in the final formulation of the Product. Justified it as a legacy product and that the procedure included the materials category III as a mandatory face-to-face audit only in December 2020.

There is an indication of a possible audit at sigma aldrich supplier in December 2010. 2021, but does not specify the exact location of the Audit, since the Initial GMP for qualification indicates an address in Bangalore, but the 3 manufacturing sites indicated as approved are at other addresses, and it is not clear whether they will be audited and the exact period for the audit.

Article infringed on non-compliance: 182

Standard infringed on non-compliance: RDC 301/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

The action plan presented was the same indicated for nc major 3, indicating a improvement in the procedure for the qualification of each supplier/material Individually. However, it did not present the details of the on site audit plan suppliers of 2-Phenoxy-Ethanol material. The NC detected was that the company predicted that this material should be audited on site. However, it did not present the detailed schedule indicating the audit dates for each audit site manufacture of the material. The plan presented does not specifically address the issue of detailed schedule for carrying out the audits of this material.

NC Classification: AOD (Determined Official Action)
Justification for the Adoption of AOD:

The company did not present a suitable plan for the item. Adequate mitigation would be presentation of the detailed schedule for the audits planned for this Excipient.

Monitoring Strategy: Documentary Assessment
Planned Date: Not available
BBIL Response Dated 26/03/2021:
The category - III excipients vendors audit schedule was prepared for the year 2021 & 2022 and attached as **Annexure-34.**

Minor Non-Compliance 7

The company does not continuously record the storage temperature of the corresponding deviations, in disagreement with Art. 63 of IN 36/2019. The Vero cell banks are stored in the vapor phase of nitrogen tanks liquid QAD-LNR-001 (MCB) and QAD-LNR-003 (WCB), however the continuous recording of temperature is carried out with sensor installed in the liquid phase. For the QAD-LNR-tank 003, the company has a sensor installed in the steam phase, however the registration of the temperature is carried out manually twice a day. No procedure for recording temperature deviations and has been checked in the system BMS, a temperature tour for 15 minutes in the month of February2021.

Article infringed on non-compliance: 63

Standard infringed on non-compliance: IN 36/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

The report of the investigation of the punctual deviation in which there was a tour was presented temperature during the segregation of materials, with the conclusion of the absence of impact on cell banks.

The liquid nitrogen tank will undergo corrective action: permanent positioning temperature sensor at the point of the steam phase, according to qualification. The forecast of conclusion of the action is 30/05/2021.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015

Minor Non-Compliance 8

The QAD-LNR-003 tank, used for wcb, was not qualified, in disagreement with art. 92 of RDC 69/2014.

Article infringed on non-compliance: 92

Standard infringed on non-compliance: RDC 69/2014 **NC**
was categorized as: Annex I of POP-O-SNVS-014 **NC**
number listed in Annex I to POP-O-SNVS-014: 58

Proposed Corrective or Preventive Action Plan:

The QAD-LNR-003 tank, used for the WCB, will be qualified. The CAPA/SAS/21005 on 03/17/2021, scheduled for completion on 06/30/2021.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015

Minor Non-Compliance 9

The performance qualification of the QAD-LNR-001 tank did not consider the conditions operating ranges of the equipment, in disagreement with Art. 39 of IN 47/2019. The PQP/QAD/LNR/001/19/00 document, adopted on 27/07/2019, describes the qad-lnr- nitrogen tank performance qualification protocol 001 (used for storage of Vero cell MCB). The protocol establishes that the temperature in the liquid phase should be less than -196°C, while in the steam phase at least -130°C should be obtained. Five sensors were installed, 1 in the liquid phase and 4 in the steam phase, monitored for 24 h.

PQR/QAD/LNR/001/19/00, approved on 17/09/2019, indicates that the maximum temperature obtainedintheliquidphasewas-198.3°C, while the maximum temperature of the steam phase was at the time of the visit to the BMS monitoring area, the temperature of the registered by thesensorinstalledintheliquidphasewas-167°C. did not assess the impact of minimum and

maximumliquidnitrogenlevelsonthetemperatureandwhetherthesensorinstalledforroutine monitoring is representative of the temperature of the tank.

Article infringed on non-compliance: 39

Standard infringed on non-compliance: IN 47/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014**: 58

Proposed Corrective or Preventive Action Plan:

The company acknowledges the observation, recording the discrepancy in the IR/SAS/21009. With based on the assessment of the incident, the root cause was identified as: the protocol was not designed to qualify the LN2 container with the minimum amount of nitrogen temperature correlationbetweenthequalifyingdataloggersandthedataloggerstemperaturemonitoringin the routine. Temperature sensors will be placed in the bottom, middle and top of the tank to cover the liquid phase and the steam phase. The temperature recorded in the liquid phase and in the vapor phase found meets the criteria acceptance according to the performance qualification report PQR/QAD/LNR/001/19/00approvedon17/09/2019.In addition, preventive maintenance and calibration are satisfactory. Therefore, it is not there is an impact on the performance of the equipment and stored material.

As a corrective action plan, the qualification protocol will be designed and the Liquid nitrogen ID QADLNR-001 will be qualified with minimum nitrogen level liquid and with temperature correlation of routine monitoring, according to the CAPA/SAS/21005 started on 17/03/2021, scheduled for completion on 05/30/2021.

NC Rating: SAI (No Action Indicated)

Standard infringed on non-compliance: IN 35/2019 **NC was categorized as:** Annex I of POP-O-SNVS-014 **NC number listed in Annex I to POP-O-SNVS-014**: 303

Proposed Corrective or Preventive Action Plan:

Daily, pure steam samples from all pure steam generation points of according to the sampling schedule are collected and tested. The results were reviewed and considered satisfactory. SOP # QCC/088 does not include sampling of pure steam and distribution line monitoring. As a corrective action, the change control # CC/QCC/21015 was started for review of SOP # QCC / 088 to include:

1. Frequency for collection of pure steam samples from the points of use in the Distribution

2. Incorporating the details of the points of use in the PCOS.

3. Analysis of pure steam samples collected in the distribution lines. Sampling will be done for othersamplingpointsinrotationschemetocoverallsamplingpointsinthepuresteamsystem. The deadline for finalization of the action is30/04/2021.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS- 015

Non-Compliance Minor 13

Thecellularexpansionareaenvironmentalmonitoringprogramhasnotbeenestablishedonthe basi of quality risk management, in disagreement with the article 22 of IN 36/2019. Environmental monitoring of laminar flow (grade A) where open operations related to cellular expansion in the PB1 building only is performed once a week, the same frequency established for the area surrounding grade C.

Article infringed on non-compliance: 22

Standard infringed on non-compliance: IN 36/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

The company recognizes the observation. This one-way flow is used to cell expansion activities is surrounded by grade C area routine environmental system is not carried out during daily operation in accordance with the SOP # SAS/012 (Environmental Monitoring Program). Monitoring data one-way flow are shown within the trend. As corrective action, the respective SOP #SAS/012 will be revised to include the monitoring frequency grade 'A' LAF surrounded by grade 'C', and should be

monitored during operation. The CAPA/SAS/21001 was started on 17/03/2021 and has a deadline of completion of 30/04/2021.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS-015

Non-Compliance Minor 14

There were no records demonstrating that all sampling procedures for oCD analyses of water systems were in fact performed, in disagreement with the article 14, item IV, of RDC 301/2019.

Article infringed on non-compliance: 14

Standard infringed on non-compliance: RDC 301/2019
NC was categorized according to: Decision-making tree

Proposed Corrective or Preventive Action Plan:

ThecompanyacknowledgestheobservationandinformsthatthereisnoSOPQCC/088torecord the details of the water samples.

Change control # CC/QCC/21015 was initiated on 17/03/2021 for the revision of the SOP #QCC/088 to include log book format to record the details of sampling for chemical quality control parameters(OCD,conductivity,pH etc.) and verification of the activity by the supervisor toconfirmthatsamplingandtestsareperformedforallsamples,as mentioned in the schedule. The deadline for completion of the action, as reported in the plan is30/05/2021.

NC Rating: SAI (No Action Indicated)
Monitoring Strategy: Next Planned GMP Inspection according to POP-OSNVS- 015

COMPLETION OF THE EVALUATION OF THE ACTION PLAN

Whereastheplanpresenteddidnotprovideevidenceofimmediateresolutionmitigationofthe risks associated with the three critical non-conformities and eight major that would result in standardized health actions in accordance with POP-O-SNVS-014, the classification of the company according to it is AOD (Determined Official Action): establishment where conditions or practices have been found (in disagreement with th health standards/GMP requirements in place) during the inspection that resulted in adoption by the Competent Health Authority, due to the manifestation of the precarious, inadequate or insufficient on the part of the establishment, of sanitary actions to the affected batch, product or productionline.

In accordance with Article 376 of RDC 301/2019 and POP-O-SNVS-014, the classification in AOD results in the rejection of the GMP certificate when all products and forms the respective line are subject to standardized sanitary action.

Thecriticalnon-conformitiespointedoutarerelatedtotheabsenceoftoensureconsistencyof the antigenic content and potency of the vaccine, lack of a validated method for checking for complete virus inactivation and consequent lack of validation of viral inactivation, and insufficientmeasurestoensurecompleteviralinactivationinthePQ3area.Inaddtothesenon-conformities insufficient precautions to avoid microbial contamination during the treatmentof

aseptic product processing and incomplete process validation studies, that do not guarantee that the removal of impurities during purification is consistent. It is important to note that for the 3 critical non-conformities pointed out during the inspection, the company proposes to finalize corrective actions only on 07/30/2021. After adequacy of all non-conformities that would result in the adoption of sanitary action, the company may apply for a new certification by presenting the respective evidence.

The adequacy of the company can be evaluated in a documentary manner, without the need for a new face-to-face inspection.

Prezada Emanuela Medrades,

Boa tarde!

A pedido do Coordenador-Geral de Logistica de Insumos Estratégicos para Saúde (CGLOG) venho por meio deste, *mui respeitosamente,* solicitar vossos préstimo quanto ao envio dos documentos elencados na Resolução da Diretoria Colegiada (RDC) 476, de 10 de março de 2021 para que esta coordenação possa solicitar junto a Agencia Nacional de Vigilância Sanitária (ANVISA) o pedido de concessão de excepcionalidade para a importação do objeto disposto no Contrato 52/2021.

Ficamos no aguardo.

Recibo Eletrônico de Protocolo - 1464456

Usuário Externo (signatário): Ariadne Gisele Muniz Bonvino
IP utilizado: 189.28.128.242
Data e Horário: 25/05/2021 13:35:11
Tipo de Peticionamento: Intercorrente
Número do Processo: 25351.915151/2021-48
Interessados:
MINISTERIO DA SAUDE/DEPARTAMENTO DE LOGISTICA EM SAUDE-DLOG/CGLOG/DIIMP
Protocolos dos Documentos (Número SEI):
- Declaração Precisa - Protocolo GMP para o IFA 1464455

O Usuário Externo acima identificado foi previamente avisado que o peticionamento importa na aceitação dos termos e condições que regem o processo eletrônico, além do disposto no credenciamento prévio, e na assinatura dos documentos nato-digitais e declaração de que são autênticos os digitalizados, sendo responsável civil, penal e administrativamente pelo uso indevido. Ainda, foi avisado que os níveis de acesso indicados para os documentos estariam condicionados à análise por servidor público, que poderá alterá-los a qualquer momento sem necessidade de prévio aviso, e de que são de sua exclusiva responsabilidade:

- a conformidade entre os dados informados e os documentos;
- a conservação dos originais em papel de documentos digitalizados até que decaia o direito de revisão dos atos praticados no processo, para que, caso solicitado, sejam apresentados para qualquer tipo de conferência;
- a realização por meio eletrônico de todos os atos e comunicações processuais com o próprio Usuário Externo ou, por seu intermédio, com a entidade porventura representada;
- a observância de que os atos processuais se consideram realizados no dia e hora do recebimento pelo SEI, considerando-se tempestivos os praticados até as 23h59min59s do último dia do prazo, considerado sempre o horário oficial de Brasília, independente do fuso horário em que se encontre;
- a consulta periódica ao SEI, a fim de verificar o recebimento de intimações eletrônicas.

A existência deste Recibo, do processo e dos documentos acima indicados pode ser conferida no Portal na Internet do(a) Agência Nacional de Vigilância Sanitária.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1425

Cara Ariadne, boa tarde.

Compartilho protocolo realizado para envio do relatório de validação do método de controle da proteína S1(antígeno) junto ao CBPF.

Informo que a potência foi concluída no sábado e eles estão encerrando a compilação para o relatório final. Informei a ANVISA que como ultrapassamos as 21h aqui, o relatório será protocolado amanhã no primeiro horário.

Gostaria de pedir a gentileza que consultem junto a ANVISA qual o prazo de análise que eles optaram por seguir, se 7 ou 30 dias.

Prezada Anvisa, boa tarde!

Encaminho, para ciência, e-mail da empresa Precisa em que informa que foi protocolada documentação adicional para o CBPF.

E empresa solicita, ainda, esclarecimento acerca do prazo para análise desta petição, 7 ou 10 dias?

Agradeço.

Ariadne, bom dia.

Conforme falamos, recebemos a confirmação de protocolo do GMP IFA.

Peço que identifique na declaração anexa,

Mais uma vez, permanecemos a disposição.

Atenciosamente,

Emanuela Medrades

Prezada Emanuela Medrades,

Boa tarde!

A pedido do Coordenador-Geral de Logistica de Insumos Estratégicos para Saúde (CGLOG) venho por meio deste, *mui respeitosamente,* solicitar vossos préstimo quanto ao envio dos documentos elencados na Resolução da Diretoria Colegiada (RDC) 476, de 10 de março de 2021 para que esta coordenação possa solicitar junto a Agencia Nacional de Vigilância Sanitária (ANVISA) o pedido de concessão de excepcionalidade para a importação do objeto disposto no Contrato 52/2021.

Ficamos no aguardo.

À AGÊNCIA NACIONAL DE VIGILÂNCIA SANITÁRIA
QUESTIONAMENTOS REFERENTE PARTE CLÍNICA.

Hyderabad, 22 de maio de 2021

Ref.: Vacina Covid-19, Virion Inteiro Inativado (BBV152) / Submissão Prévia para Autorização de Uso Emergencial

A Precisa Comercialização de Medicamentos em atendimento ao estabelecido como estratégia de atuação da Agência nesse cenário de Pandemia apresenta através deste documento as suas respostas, considerações e compromissos com cada um dos itens a seguir.

A. QUESTIONAMENTOS SOBRE OS ESTUDOS CLÍNICOS:

1. Apresentar os protocolos, com descrição das respectivas emendas aprovadas, de todos os estudos clínicos conduzidos com a vacina.
   Resposta:

S No.	Title of the study	Status
1.	An adaptive, Seamless Phase 1, Followed by Phase 2 Randomized, Double-blind, Multicenter Study to evaluate the Safety, Reactogenicity, Tolerability and Immunogenicity of the Whole-Virion Inactivated SARS-CoV-2 Vaccine (BBV152) in Healthy Volunteers.	Study is ongoing.
2.	An adaptive, Seamless Phase 1, Followed by Phase 2 Randomized, Double-blind, Multicenter Study to evaluate the Safety, Reactogenicity, Tolerability and Immunogenicity of the Whole-Virion Inactivated SARS-CoV-2 Vaccine (BBV152) in Healthy Volunteers.	
3.	An Event-driven, Phase3, Randomized, Double-blind, Placebo-controlled, Multicenter Study to evaluate the Efficacy, Safety, Immunogenicity and Lot-to-Lot consistency of BBV152, a Whole-virion Inactivated SARS-CoV-2 Vaccine in Adults ≥18 Years of Age.	Study is ongoing.

Tabela 1 - Tabular listing of All Clinical Studies Módulo 5 CTD.

As Informações detalhadas de cada um dos estudos, como os protocolos solicitados estão no Módulo 5 do CTD peticionado no expediente nº 1214929212 na data de 30 de março 2021.

Todos os módulos do CTD estão sendo revisados e atualizados, e terão tais atualizações marcadas para melhor identificação da ANVISA.

Conforme informado pela BBIL, receberemos os documentos atualizados em 10 de junho de 2021.

2. Apresentar o relatório de Imunogenicidade atualizado e completo, contendo os resultados de todos os parâmetros imunológicos (anticorpos de ligação, neutralizantes e reposta celular) avaliados nos estudos clínicos. O relatório deve incluir resultados individuais tabelados para todos os participantes avaliados e apresentação dos resultados de avaliação de anticorpos em título geométrico médio e aumento de título de anticorpos. Todos os resultados disponíveis até momento, para todos os pontos de tempo de coleta, devem ser apresentados.
Resposta:

A avaliação de imunogenicidade foi planejada no subconjunto dos 600 participantes que foram recrutados nos centros de categoria 3. Todas as amostras de sangue desses participantes foram coletadas no Dia 0, Dia 28, Dia 56 e essas amostras estão sendo analisadas. Os dados de imunogenicidade em termos de títulos médios geométricos (GMTs) por anticorpo neutralizante, proteína S e título de ligação anti-IgG específico de RBD serão submetidos ao CDSCO (Agência Indiana) e estarão disponíveis em 15 de junho de 2021.

3. Apresentar os dados de segurança acumulados dos estudos de fase 1 e 2, com foco nos eventos adversos graves, eventos adversos de interesse especial e casos graves de Covid-19, acompanhados das respectivas narrativas detalhadas.
Resposta:

Dados disponíveis no CSR interino que será disponibilizado até 30 de junho de 2021, contendo também:

1. Relatório estatístico completo (25.800 participantes):
A. EA sério / não solicitado / sério até 2 meses após a dose-2;
B. Eficácia de 130 eventos sintomáticos;
C. Eficácia assintomática de 36 eventos;
D. Eficácia contra variantes preocupantes;

4. Apresentar os relatórios completos com resultados atualizados para os desfechos primários, secundários e exploratórios, dos estudos clínicos fase 1, 2 e 3, que incluam as informações conforme o definido no guia do ICH E 3, Estrutura e conteúdo dos relatórios de estudos clínicos.
Resposta:

Relatórios disponíveis apresentados no Módulo 5 do eCTD peticionado no expediente nº 1214929212 na data de 30 de março 2021.

5. Ressaltamos que os seguintes pontos referentes ao estudo fase 3, protocolo BBIL/BBV152-C/2020, devem ser claramente esclarecidos, justificados e/ou descritos:

   i. Data de corte dos dados para a avaliação interina de eficácia e segurança.
   Resposta:

   - 2° Report Interino com data de corte para eficácia em 08 de maio de 2021.

- Para monitoramento de segurança, todas os eventos adversos não graves foram apresentados para os primeiros 8.000 (oito mil) participantes recrutados inicialmente até o dia 01/03/2021, completando 42 dias de monitoramento.
- Todos as EAGs foram apresentadas até o dia 07 de abril de 2021.

ii. Descrição detalhada e justificativa da estratégia de randomização adotada.
Resposta:

Todo o plano de randomização foi evoluído e explicado no documento denominado "RESPONSES CLÍNICAL ANVISA QUERIES", através das respostas as questões 3.7 e justificado na resposta 3.13, além do Plano de Randomização constar no Anexo 9 do documento peticionado no expediente nº 1214929212 na data de 30 de março 2021.

iii. Descrição detalhada sobre a disposição dos participantes e representação em fluxograma para as populações de eficácia, Imunogenicidade e segurança no estudo fase 3, com uma contabilidade clara de todos os pacientes que foram incluídos e dos que foram retirados do estudo. O número de pacientes que foram randomizados, incluídos e retirados por semana do estudo deve ser fornecido, bem como os motivos para todas as interrupções pós-randomização, agrupados por tratamento e motivo principal (perda seguimento, evento adverso, não conformidades, etc.). Deve ser também fornecido o número de participantes triados para inclusão no estudo e uma análise das razões para a exclusão de participantes durante a triagem. Informar quantos participantes receberam uma dose da vacina e quantos receberam duas doses até o momento. Todos os dados sobre disposição de participantes solicitados devem ser apresentados também para cada categoria 1, 2 e 3 de participantes definida no estudo e para cada centro do estudo.
Resposta:

Essas informações foram solicitadas a IQVIA e serão enviadas para a ANVISA.

Compartilhamos o projeto de análise (Mock Shells) no Anexo 1 que detalham todas as tabelas, listas de segurança e números para o relatório final já no formato que será apresentado no CSR.

E a seguir o layout da disposição dos participantes e os dados que serão detalhados.

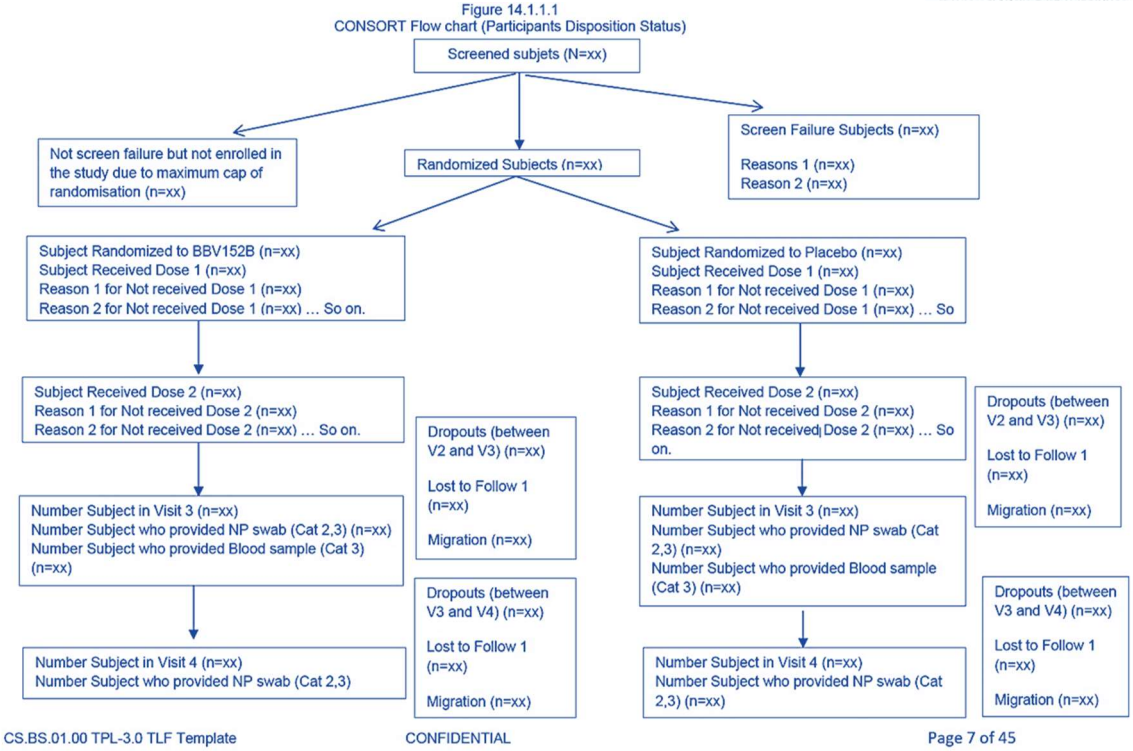

Figura 1 - Consort Flow Chart (Participants Disposition Status).

iv. Informar qual o número total de participantes que foram incluídos na avaliação interina de eficácia. Apresentar detalhamento sobre essa população considerada para análise interina de eficácia, descrevendo quantos tinham recebidos duas doses da vacina e dentre esses quantos tinham acompanhamento total de 42 dias no momento de corte de dados para a análise de eficácia. Informar também quantos participantes tinham recebido apenas uma dose da vacina no momento de corte de dados para análise interina. Descrever qual era a população considerada para análise por protocolo e por intenção de tratar.
Resposta:

Foram incluídos na segunda avaliação interina de eficácia do desfecho primário o total de 24.417 (vinte e quatro mil, quatrocentos e dezessete) participantes, todos já com a segunda dose da vacina/placebo há duas semanas, ou seja, total de 42 dias, sendo dividido conforme tabela abaixo.

Description	**Treatment Arm**		
	BBV152 (N = 12219)	**Placebo (N=12198)**	**Total (N =24417)**
First occurrence of Virologically confirmed (RT-PCR) n (%)	23 (0.188)	104 (0.853)	127 (0.520)
VE (%)	77.9		
98.78% CI	[60.8, 88.4]		
p value	<0.0001		

Tabela 2 – Segunda avaliação interina.

Para avaliação da eficácia não foram considerados os participantes com desvios de protocolo.

O SAP (Statistical Analisys Plan) com as descrições das populações PPs (per-protocol-set) e FAS (Full Analysis Set) está sendo inserido neste documento conforme a seguir.

Anexo 2. SAP BBV152.

v. Informar quantos casos Covid positivo ocorreram no braço vacinados e placebo conforme a categoria 1, 2 e 3, definida pela empresa.

S No.	Site	Category	Number of Cases
1	AIIMS, Delhi	Symptomatic	2
2	Director of Public Health – Chennai	Symptomatic	1
3	Government Fever Hospital – Guntur	Symptomatic	7
4	ICMR – Kolkata	Symptomatic	12

	Total	**25800**	**24454**	**23649**

Tabela 4 - Categoria e quantidade de participantes por site.

vi. Esclarecer, quanto ao acompanhamento dos participantes para detecção de casos suspeitos e confirmação de Covid, como o contato telefônico de 15 em 15 dias garantiu que os indivíduos sintomáticos tivessem amostras biológicas coletadas no intervalo de tempo adequado para confirmação virológica por PCR. A empresa deve apresentar justificativa, incluindo dados científicos e discussão sobre a diminuição da carga viral ao longo do tempo a partir do início dos sintomas e a sensibilidade comprovada do teste PCR.
Resposta:

Para os casos sintomáticos, todos os participantes foram acompanhados por telefone. O questionário de acompanhamento telefônico cobre todos os sintomas e, a critério dos PIs, todos os suspeitos foram chamados ao local e foram coletadas amostras para confirmação do quadro de doença COVID-19. Portanto, há menor chance de perder os casos sintomáticos.

Todas as chamadas telefônicas de 15 dias foram realizadas em todos os sites da categoria de forma dilatada.

É importante mencionar que visitas de doença não programadas foram incentivadas para os participantes até o dia 360. Todos os participantes receberam contatos da equipe de estudo na assinatura do consentimento informado e foram instruídos a contatar a equipe conforme necessário.

vii. Ainda quanto aos critérios para identificar um caso suspeito de COVID-19 sintomático a empresa informa que os participantes com qualquer sintoma de COVID-19 com duração de pelo menos 48 horas (exceto para febre e/ou sintomas respiratórios) visitarão a clínica ou serão visitados em casa por uma equipe médica qualificada dentro de 72 horas para coletar uma amostra de swab nasofaríngeo (NF) para teste de RT-PCR para SARS-CoV-2. Esclarecer como foi garantido que a coleta de swab NF para teste PCR foi feita em período de tempo máximo adequado após o início dos sintomas suspeitos, visto que foi estabelecido apenas um prazo mínimo a partir do início de sintomas, e não foi estabelecido também o necessário prazo máximo a partir do início de sintomas**.**
Resposta:

Para os casos sintomáticos, todos os participantes foram acompanhados por telefone. O questionário de acompanhamento telefônico cobre todos os sintomas e, a critério dos PIs, todos os suspeitos foram chamados ao local e foram coletadas amostras para confirmação do quadro de doença COVID-19. Portanto, há menor chance de perder os casos sintomáticos.

viii. Esclarecer se foram definidos critérios de avaliação dos casos Covid-19 positivos de acordo com gravidades leve, moderada e grave. Apresentar documentação que comprove qual escala de gravidade foi adotada, com descrição dos respectivos sintomas para definição de gravidade.
Resposta:

Os critérios de avaliação dos casos graves de Covid19, bem como identificação de sintomas de desfechos primários, foram realizados com base no *Development and Licensure of Vaccines to Prevent COVID-19 – Guidance for Industry* do FDA, conforme a seguir:

Identificação de sintomas para desfecho primário em acordo com o guia do FDA e também aplicado a outros estudos clínicos de vacinas contra SARS- CoV-2 como por exemplo no COV-02-IB (ClinicalTrials.gov NCT04456595).

- Fever or chills.
- Cough.
- Shortness of breath or difficulty breathing.
- Fatigue.
- Muscle or body aches.
- Headache.
- New loss of taste or smell
- Sore throat.
- Congestion or runny nose.
- Nausea or vomiting.
- Diarrhea.

Case Definition of symptomatic COVID-19 (Severe)	Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following symptoms: 1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%) 2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO) 3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors) 4. Significant acute renal, hepatic, or neurologic dysfunction 5. Admission to an ICU 6. Death

Tabela 5 - Definição de casos graves de Covid-19 conforme protocolo 3.0 BBV152.

E por fim, a definição de casos graves descritas nas páginas 13 e 14 do documento inserido no Anexo 3:

> As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:
>
> - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, SpO2 ≥ 93% on room air at seas level or PaO2/FiO2 > 300 mmHg).
> - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO) .
> - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors).
> - Significant acute renal, hepatic, or neurologic dysfunction.
> - Admission to an ICU.
> - Death.
>
> SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.
> The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

ix. Esclarecer se, no caso de um participante com suspeita de COVID-19 que teve um primeiro resultado negativo no teste de confirmação virológica por PCR, coletas adicionais de amostras clínicas foram estabelecidas como necessárias para novo teste por PCR em

diferentes períodos desde o início dos sintomas, para descarte definitivo de possibilidade de um caso positivo de COVID-19.
Resposta:

As coletas adicionais ou realizações de novo teste após RT-PCR negativo eram definidas pelo PI/site e justificada com racional caso fosse conduzido uma nova testagem de confirmação.

x. Esclarecer quais foram os critérios para permitir a administração da segunda dose da vacina nos participantes do estudo. Esclarecer se os participantes que foram positivos para COVID-19 entre a primeira e a segunda doses puderam receber a segunda dose.
Resposta:

Conforme descrito no protocolo BBV152 versão 3.0 nos critérios de elegibilidade, a revacinação não acontecerá nas seguintes condições:

- Pregnancy.
- History of virologically (RT-PCR) confirmed SARS-CoV-2 infection
- Anaphylactic reaction following administration of the investigational vaccine.

xi. Justificar a definição de casos graves de Covid no estudo fase 3, que está em desacordo com as definições harmonizadas internacionalmente e conforme o preconizado pela OMS.
Resposta:

Os critérios de avaliação dos casos graves de Covid19, bem como identificação de sintomas de desfechos primários, foram realizados com base no *Development and Licensure of Vaccines to Prevent COVID-19 – Guidance for Industry* do FDA, conforme a seguir:

Identificação de sintomas para desfecho primário em acordo com o guia do FDA e também aplicado a outros estudos clínicos de vacinas contra SARS- CoV-2 como por exemplo no COV-02-IB (ClinicalTrials.gov NCT04456595).

- Fever or chills.
- Cough.
- Shortness of breath or difficulty breathing.
- Fatigue.
- Muscle or body aches.
- Headache.
- New loss of taste or smell
- Sore throat.
- Congestion or runny nose.
- Nausea or vomiting.
- Diarrhea.

Case Definition of symptomatic COVID-19 (Severe)	Virologically confirmed (RT-PCR positive) SARS-CoV-2 Severe Respiratory tract infection with one or more of the following symptoms: 1. Clinical signs at rest indicative of severe systemic illness (respiratory rate >30/min, heart rate >125/min, SpO2<93%) 2. Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation, or ECMO) 3. Evidence of shock (SBP <90 mm Hg, DBP <60 mm Hg, or requiring vasopressors) 4. Significant acute renal, hepatic, or neurologic dysfunction 5. Admission to an ICU 6. Death

Tabela 6 - Definição de casos graves de Covid-19 conforme protocolo 3.0 BBV152.

E por fim, a definição de casos graves descritas nas páginas 13 e 14 do documento inserido no Anexo 4:

> As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:
>
> - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, SpO2 ≥ 93% on room air at seas level or PaO2/FiO2 > 300 mmHg).
> - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO) .
> - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors).
> - Significant acute renal, hepatic, or neurologic dysfunction.
> - Admission to an ICU.
> - Death.
>
> SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.
> The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

xii. Apresentar os resultados de eficácia da vacina proposta para os subgrupos de acordo com a soro positividade dos participantes para SarsCov-2 em linha de base, no momento da inclusão no estudo.
Resposta:

Dado indisponível no momento. Dados de eficácia em participantes soropositivos serão apresentados em desfechos secundários.

A análise primária avalia a eficácia contra a primeira ocorrência de casos sintomáticos de COVID-19 confirmados virológicos (RT-PCR). Os participantes que forem soropositivos no início do estudo não entrarão na análise de eficácia primária. No entanto, como um desfecho secundário no protocolo, estamos avaliando a eficácia do BBV152 em indivíduos soropositivos. Isso foi feito para limitar o recrutamento de participantes soropositivos para o estudo. No entanto, ~ 35% da soro positividade foi observada.

xiii. Esclarecer como será avaliada a eficácia da vacina e perda de proteção em longo prazo, após a ocorrência de 130 casos Covid-19 no estudo, conforme planejado pelo desenvolvedor.
Resposta:

No estudo de Fase 3, um subgrupo (600) dos participantes será avaliado quanto à imunogenicidade em termos de GMT e soro conversão do título de anticorpos neutralizantes contra o vírus SARS-CoV-2 no Mês 0, Mês 1, Mês 2, Mês 3, Mês 6 , Mês 9 e mês 12.

xiv. Justificar a utilização do adjuvante Alum no grupo controle, visto que os eventos adversos causados pelo adjuvante terão análise prejudicada por não haver um controle sem o adjuvante Alum. Apresentar análise dos eventos adversos no grupo placebo e sua relação potencial com o adjuvante Alum.
Resposta:

Conforme mencionado anteriormente, o adjuvante IMDG possui um efeito imunomodulador independentemente de sua associação com um antígeno, e isso poderia prejudicar a análise da eficácia da Covaxin, ainda que este efeito não seja tão representativo.

Por isso, optou-se pela utilização do adjuvante Alum no grupo controle. Além do fato de também conter base de alumínio também presente no IMDG.

Description	Treatment Arm		
	BBV152 (N=4,061) n (%)	Placebo (N=3,804) n (%)	Total (N=7,865) n (%)
No of Subject with at least one Adverse Event	335 (8.25)	300 (7.89)	635 (8.07)

Severe	9 (0.22)	7 (0.18)	16 (0.20)

Tabela 7 - Eventos adversos reportados para 7.865 participantes.

xv. Esclarecer como os participantes do estudo foram instruídos sobre como registrar os potenciais eventos adversos, solicitados ou não, locais e sistêmicos. Apresentar os formulários e/ou diários, eletrônicos ou não, que foram utilizados pelos participantes do estudo. Informar quais os equipamentos para permitir medição e temperatura, pressão e outras avaliações foram fornecidos aos participantes do estudo.
Resposta:

Anexo 5 diário do participante com as informações a serem preenchidas pelos participantes. E instruções. Cada participante recebeu 01 (um) termômetro junto ao ICF e Diário. Os instrumentos são para aferir os sinais solicitados tanto no diário, quanto nas ligações de acompanhamento ou nas ligações de suspeita de Covid19.

Anexo 6. Diário do participante;
Anexo 7. CRF.

xvi. Informar quais foram os eventos adversos solicitados definidos no estudo.
Resposta:

Solicited Local AEs	**Solicited Systemic AEs**
• Pain at the injection site; • Swelling at the injection site; • Induration (hardness) at the injection site; • Erythema (redness) at the injection site	• Fever; • Chills; • Headache; • Nausea; • Vomiting; • Fatigue; • Myalgia; • Arthralgia

Tabela 8 - Eventos adversos relacionados ao estudo.

Na tabela a seguir, a classificação desses eventos solicitados.

Reaction	**Grade 0**	**Grade 1**	**Grade 2**	**Grade 3**	**Grade 4**
Injection site pain	None	Does not interfere with the activity	Repeated use of over-the counter pain reliever > 24 hours or	Any use of prescription pain reliever or prevents	Requires emergency room visit or hospitalization

			interferes with the activity	daily activity	
Injection site erythema (redness) < 25 mm/ < 2.5 cm 25 in diameter	< 25 mm/ < 2.5 cm	25 - 50 mm/ 2.5 - 5 cm	51 - 100 mm/ 5.1 - 10 cm	> 100 mm/ > 10 cm	Necrosis or exfoliative dermatitis
Injection site swelling/induration (hardness)	< 25 mm/ < 2.5 cm in diameter	25 - 50 mm/ 2.5 - 5 cm in diameter	51 - 100 mm/ 5.1 - 10 cm in diameter	> 100 mm/ > 10 cm in diameter	Necrosis
Fever (oral)	< 38.0°C or <100.4°F	38.0 – 38.4°C or 100.4 – 101.1°F	38.5 – 38.9° C or 101.2 – 102.0°F	39.0 – 40.0°C or 102.1 – 104.0°F	< 40.0°C or <104.0°F
Chills	None	No interference with activity	Some interference with activity not requiring medical intervention	Prevents daily activity and requires medical	Requires emergency room visit or hospitalization
Headache	None	No interference with activity	Repeated use of over-the-counter pain reliever > 24 hours or some interference with activity	Significant; any use of prescription pain reliever or prevents daily activity	Requires emergency room visit or hospitalization
Nausea	None	No interference with activity or 1-2 episodes/ 24 hours	Some interference with activity or > 2 episodes/24 hours	Prevents daily activity, requires outpatient intravenous hydration	Requires emergency room visit or hospitalization for hypotensive shock
Vomiting	None	No interference with activity or 1-2 episodes/ 24 hours	Some interference with activity or > 2 episodes/24 hours	Prevents daily activity, requires outpatient intravenous hydration	Requires emergency room visit or hospitalization for hypotensive shock
Fatigue	None	No interference with activity	Some interference with activity	Significant;	Requires

				prevents daily activity	emergency room visit or hospitalization
Myalgia (muscle aches all over the body)	None	No interference with activity	Some interference with activity	Significant; prevents daily activity	Requires emergency room visit or hospitalization
Arthralgia (joint aches in several joints)	None	No interference with activity	Some interference with activity	Significant; prevents daily activity	Requires emergency room visit or hospitalization

Tabela 9 - Classificação dos eventos solicitados.

Reference: Brighton classification case definition or common terminology criteria for adverse events (CTCAE) version 5.0.

xvii. Apresentar as narrativas completas de eventos adversos graves, incluindo óbitos, e eventos adversos de interesse especial. As narrativas devem incluir a natureza e intensidade do evento, idade e sexo do paciente; condição clínica geral do paciente, o curso clínico que levou ao evento e opinião do investigador e do patrocinador sobre causalidade. Deve ser informado também as doenças concomitantes/anteriores relevantes com detalhes de ocorrência/duração e medicação concomitante/anterior com detalhes da dosagem. A empresa também deve fornecer a avaliação de causalidade em relação a esses eventos.
Resposta:

Apresentando os casos de óbitos no expediente nº 2032599211 na data de 26 de maio de 2021.

Anexo 8. – Com o mesmo tratamento para as outras EAGs.

xviii. Informar o número de lote, data de fabricação e extensão da utilização de cada lote utilizado nos estudos clínicos.
Resposta:

NÚMERO DE LOTE	TAMANHO DO LOTE	DATA	FINALIDADE

1 General Programming Note:

- N =number of participants in the relevant population per cohort and n= The number of participants, % = n/N *100
- m= Count of Events (One participant may be counted more than once)
- For Decimal point of statistics of respective parameter please use the SAP Section Appendix 1
- For individual TLFs Footnotes must be left justified except “page x of y” (where Y is the total number of pages for the individual TLF output) which must be right justified.
- In compiled TLFs for the page identification in the format Page X of Y (where Y is the total number of pages for the TLF) should appear in row 2, In header which must be right justified.
- All TLFs will be based on SDTM/ADaM or Derived datasets and the SDTM/ADaM or Derived dataset used to create respective TLFs will be provided in the footnote “Source” as appropriate.

2 General Notes:

- Treatment: BBV152B and Placebo. In BBV152B: BBV152B Lot 1, BBV152B Lot 2, BBV152B Lot 3.
- The section headings/TOC provided in Mock Shell document is only for the mock shell for reference purpose and actual mock shell for respective TLFs Output will start form the “table number, table title and population information for example (Table 14.1.1.1 Participants Disposition Status by Treatment Group (Enrolled Analysis Set)) column.

Note:
(a) All randomized participants classified according to the study product (vaccine or placebo) to which they were randomized.
(b) All randomized participants who received at least one dose of IP and had no immunologic evidence of prior COVID-19 (i.e, negative against SARS-CoV-2 antibodies) at Visit 1 before the first dose of IP. Participants will be analysed according to the study product (vaccine or placebo) received.
(c) All participants in the FAS who received planned doses of IP per schedule, seronegative for SARS-CoV-2 Antibody by ELISA at baseline, and have no major protocol deviations, as determined, and documented by the Sponsor. Participants will be analysed according to the study product (vaccine or placebo) received.
(d) Designated participants at study sites included in the immunogenicity study (Category 3) who had received both doses of IP.
(e) The Safety Set consists of all randomized participants who received at least one dose of IP, classified according to the study product received.
% = n/N *100 Where, N = number of enrolled participants and n = Number of participants

14.2 Efficacy Endpoints

14.2.1 Primary Efficacy Endpoints

Table 14.2.1.1
Primary Endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19
(Per Protocol Set)

	BBV152B (N=XX)	Placebo (N=XX)	Total (N=XX)
First occurrence of virologically confirmed n (%)	xx (xx.x)	xx (xx.x)	xx (xx.x)
VE Point Estimate	xx.xx		
95.006% CI	[xx.xx, xx.xx]		

Note: CI=Confidence Interval. VE= vaccine efficacy.
The estimate VE is given in terms of parameter P (i.e. Proportion of cases in the vaccine group) and the ratio h = Fp/Fv, which is expected to be very close to 1, since R = hP / (1-P) and thus VE = 1 – hP / (1-P). A two-sided confidence interval (CI) around the estimated VE will be obtained by converting an exact CI around the estimated probability parameter P, using the observed h = Fp/Fv, to a CI for VE. If (PL, PU) is the CI around P, the CI for VE will be [1 – hPU/(1-PU), 1 – hPL/(1-PL)].
Fv and Fp are the corresponding total lengths of follow-up in years in the two groups from Day 42, with follow-up in years defined as a follow-up in days divided by 365.25. We have considered ratio of Fp/Fv=1 for this analysis.
N = number of participants in the relevant population,
n = Number of participants with First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19. (The symptomatic COVID-19 cases include any participant who meets the Case Definitions for symptomatic endpoint or severe symptomatic COVID-19)., % = n/N *100

1. Overview

1.1 Introduction

The purpose of this Statistical Analysis Plan (SAP) is to provide details of the statistical analyses that have been outlined within the Protocol Version 4.0 for BBIL/BBV152-C/2020, dated 11/03/2020. The scope of this plan includes the final analysis, which will be executed by the Biostatistics department unless otherwise specified.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1517

2. Trial objectives

The following objectives are those stated in the protocol.

2.1 Primary Objectives (Efficacy)

- To evaluate the efficacy of BBV152 to prevent symptomatic COVID-19.

2.2 Secondary Objectives (Efficacy)

- To evaluate the efficacy of BBV152 to prevent COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint.
- To evaluate the efficacy of BBV152 to prevent severe COVID-19.
- To evaluate the efficacy of BBV152 to prevent any severity COVID-19 by age.
- To evaluate the efficacy of BBV152 to prevent asymptomatic COVID-19.
- To evaluate the efficacy of BBV152 to prevent COVID-19 regardless of symptomatology or severity.
- To evaluate the efficacy of BBV152 to prevent COVID-19 related deaths.
- To evaluate the efficacy of BBV152 to prevent symptomatic COVID-19, regardless of the previous infection.

2.3 Secondary Objectives (Safety)

- To assess the safety of BBV152

2.4 Secondary Objectives (Immunogenicity)

- To evaluate the immunogenicity of BBV152

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1518

3. Endpoints

3.1 Primary Endpoint

- First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19. (The symptomatic COVID-19 cases include any participant who meets the Case Definitions for Symptomatic Endpoint or Severe Symptomatic COVID-19).
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].

3.2 Secondary Endpoints (Efficacy)

- First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed COVID-19 cases of any severity occurring among participants 18 through 59 years of age and ≥60 years of age.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- Virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.
  [Time Frame: Month 2 to Month 12].
- Virologically confirmed COVID-19 asymptomatic and symptomatic cases occurring from two weeks after the second vaccination. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- The number of participants with virologically confirmed COVID-19 deaths.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].
- The number of participants with virologically confirmed symptomatic COVID-19. Includes cases that were seropositive at baseline. Excludes cases in which vaccination was incomplete.
  [Time Frame: Day 42 (two-weeks after the second dose) to Month 12].

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1519

3.3 Secondary Endpoints (Safety)

- Serious Adverse Events (SAEs) occurring at any time in all study participants; SAE rates will be analyzed when the primary efficacy endpoint (130 cases) is reached and at the study end.
  [Time Frame: Throughout the study period].
- Solicited local and systemic adverse events (AEs).
  [Time Frame: within 7 days post each vaccination]
- Unsolicited adverse events (AEs) occurring between the vaccination and 28 days after the final vaccination, among all study participants.
  [Time Frame: Within 28 days post vaccination]
- Immediate adverse events with 30 minutes of vaccination
  [Time Frame: within 30 minutes post each vaccination]
- Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period.
- The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial.
  [Time Frame: Throughout the study period]
- Adverse Event of Special Interest (AESI).
  [Time Frame: Throughout the study period]

3.4 Secondary Endpoints (Immunogenicity)

- Geometric Mean Titer (GMT) of SARS-CoV-2 Specific Neutralizing Antibody (nAb)
  [Time Frame: Month 0 to Month 12]
- Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Neutralizing Antibody (nAb) at Month.
  [Time Frame: Month 0 to Month 12]
- Geometric Mean Titer (GMT) of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb).
  [Time Frame: Month 0 to Month 12]
- Lot-to-Lot consistency will be assessed based on the neutralizing titer of the three consistent lots used in the trial.
  [Time Frame: Month 0 to Month 2]

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1520

4. Trial design

This is a randomized, double-blind, phase 3 study to evaluate the Efficacy, Safety, and Immunogenicity of BBV152, a Whole-Virion Inactivated SARS-CoV-2 Vaccine in Volunteers aged 18 years and above.

A total of 25,800 subjects will be enrolled and randomized in a 1:1 ratio to receive BBV152 vaccine and placebo. All participants will be assessed for efficacy and safety endpoints and provide a NP swab and blood sample before the first dose of IP. The NP swab and blood collected will be subject to RT-PCR and Anti-SARS-CoV-2 IgG antibodies. The results of this will not affect enrolment of the participant. Participants who are found to be positive for either RT-PCR Or Anti-SARS-CoV-2 IgG antibodies will be excluded from the primary efficacy analysis.

In addition, sites will be segregated based on the study objectivise:

Category 1 (Symptomatic): In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15 ±2 -day intervals.

Category 2 (Symptomatic/Asymptomatic): In addition to administering the IP and telephonic follow-up visits scheduled to detect suspect symptomatic COVID-19 infections, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

Category 3 (Symptomatic/Asymptomatic+Immunogenicity): In addition to administering the IP and telephonic follow-up visits scheduled to detect suspect symptomatic COVID-19 infections, repeated NP swabs for asymptomatic, and a series of blood samples will be collected for analyzing serum for immunological assessments.

Efficacy assessments will include surveillance for COVID-19 with RT-PCR confirmation of SARS-CoV-2 infection after the first and second dose of IP. As noted above, this is a case (event) driven study: if the prespecified criterion for early efficacy is met at the time of interim analysis (IA) and the Data and Safety Monitoring Board (DSMB) recommends stopping for demonstrated efficacy, or efficacy is established by the planned primary analysis after 130 primary endpoint events have accrued, a study

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1521

report describing the efficacy and safety of BBV152 will be prepared based on the data available at that time. Five millilitre of blood will be collected from all the RT-PCR confirmed symptomatic COVID-19 participants.

If success criteria are met either at the time of the interim analyses or when the total number of cases toward the primary endpoint has accrued, participants will continue to be followed in a blinded fashion until Month 12, to enable assessment of long-term safety (all category sites) and immunogenicity (only for category 3 [immunogenicity] sites).

The design and focus of the study are dependent on the current COVID-19 pandemic, requiring identification of participant candidates at high risk of SARS-CoV-2 infection. The Sponsor may adjust the size of the study or duration of follow-up based on the blinded review of the total number of cases of COVID-19 (based on appropriate quantum of symptomatic or severe cases) accrued during the study, in addition to estimated percentages of study participants with immunologic evidence of SARS-CoV-2 infection at baseline.

If achieving 130 cases of COVID-19 is manifestly unattainable based on plausible expansions of sample size or increased follow-up, an analysis of blinded data may be performed and change of the study design such as changing the required lower bound for the primary analysis may be proposed.

4.1 Blinding

The placebo is identical to the vaccine. Sufficient measures will be taken to assure that blinding of participants and evaluation staff is maintained. Study product assignments will be accessible to the data coordinating centre staff and others who are required to know this information to ensure proper trial conduct. The DSMB members may also be unblinded to treatment assignment as required to review vaccine safety and efficacy. Emergency unblinding decisions are expected to be rare and justified only when that information is needed for the future clinical management of that participant.

If in the opinion of the investigator, the event the health and safety of the participant will benefit from knowing the treatment code, efforts will be made to contact the medical monitor as long as Subject safety is not at imminent risk. If the Subject is at imminent

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1522

risk, the investigator should have the ability to unblind although should notify the Medical Monitor (MM) and Sponsor as soon as possible thereafter.

4.2 Planned number of sites.

Multicentre study

4.3 Planned number of subjects.

A total sample size of 25,800 volunteers, ages ≥18 years and above will receive selected formulation of BBV152 vaccine and placebo in a 1:1 ratio. Recruitment should support the generalizability of results, including enrolment of healthy participants as well as participants at risk for severe COVID-19, such as persons ≥60 years of age and those individuals with stable co-morbid diseases such as hypertension, diabetes, obesity, chronic kidney disease, chronic obstructive pulmonary disease (COPD), and chronic heart disease.

The study is designed to obtain a two-sided 95% CI for vaccine efficacy with a lower bound ≥ 30%. (A slight adjustment, to a 95.3% CI, will be necessary at the final analysis if there is an interim analysis with possible early stopping for demonstrated efficacy.) For assumed true efficacy of 60%, the required number of cases for 85% power is 130. The total number of participants required depends on the assumed incidence during the follow-up period. We assume an average incidence among placebo recipients of 1% during follow-up beginning 14 days after the second dose; thus, the expected number of participants required to accrue 130 cases is approximately 18,572. Allowing for baseline seropositivity and RT-PCR confirmed COVID-19 cases as exclusions (20%) and other losses (loss to follow-up, etc.) of 10%, the number becomes 25,794. It is planned to randomize approximately 25,800 study participants.

The assumption of Vaccine Efficacy of 60% is for sample size estimation only. The intended success criteria for vaccine efficacy are 50% (in agreement with the minimum requirement given in the WHO Target Product Profile). Based on appropriate accrual of symptomatic or severe cases, the Sponsor may increase the sample size or increase the follow-up time. These changes will be reflected in future amendments. The null hypothesis Vaccine Efficacy value may be adaptively modified to below 30% during the trial, based on a lower-than-projected COVID-19 attack rate or case accrual rate, with collaborative decision-making by DSMB. Starting with a 30% null hypothesis

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1523

VE value rather than a lower value helps assure that vaccine efficacy is estimated with sufficient precision to support decision-making about a vaccine, which may include regulatory approval and acceptance of the vaccine for manufacturing and widespread use

4.4 Treatment Intervention and Dose

Whole-Virion Inactivated SARS-CoV-2 vaccine (BBV152) will be administered as two-dose intramuscular injection 28 days apart.

BBV152B:

Note: BBV152B (Based on Phase 1 trial interim report) The dose selected for this study (6 µg of Antigen & Adjuvant-IMDG) is based on the assessment of available safety and immunogenicity data from Phase 1 studies (NCT04471519) and animal studies infusion

- Dosage Form and Route of Administration: COVID-19 Vaccine (BBV152), is a liquid 0.5 mL Vero cell-derived inactivated vaccine containing NLT 6µg and administered as a two-dose regimen intramuscularly (IM) 4 weeks apart.
- Dose Regimen: Vaccine is administered as two doses, on Day 0 and Day 28.

4.5 Success Criteria for Final Anlaysis

Success will be defined by a two-sided 95% CI for vaccine efficacy (adjusted as necessary for interim monitoring) with a lower bound ≥ 30% with point estimate >50%. The International Coalition of Medicines Regulatory Authorities noted that “a specific

Active Ingredient	Quantity
Whole Virion, Inactivated Corona Virus Antigen (Strain: NIV-2020-770)	BBV152B
	6µg
Inactive Ingredients	
Aluminium Hydroxide Gel equivalent to Al^{+++}	250 mcg
TLR7/8 Agonist	15 mcg
2-Phenoxyethanol (2PE) I.P.	2.5 mg
Phosphate Buffered Saline	q.s. to 0.5 mL

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1524

numeric value to be used for the lower bound and vaccine efficacy point estimate was not agreed upon at this stage". It was also reflected that efficacy estimates crossing a certain pre-specified lower bound for efficacy, due to factors such as epidemiological evolution of the pandemic, would not preclude the possibility of a positive benefit-risk conclusion if there also were other data supportive of efficacy. will be more than 250 ml due to addition of the drug solution to 250 mL of 0.9% Sodium Chloride solution.

4.6 Premature Discontinuation of The Trial

The Premature termination or temporary suspension of the study may be done if there is sufficient reasonable cause. Written notification, documenting the reason for study suspension or termination, will be provided by the suspending or terminating party. If the study is prematurely terminated or suspended, the Investigator will promptly inform the Ethics Committee (EC) and will provide the reason(s) for the termination or suspension. Circumstances that may warrant termination or suspension include, but are not limited to:

- Determination of unexpected significant, and unacceptable risk to subjects.
- Due to protocol non-compliance and/or any other reason, data generated is insufficient and is non-evaluable.
- Plans to modify, suspend, or discontinue the development of the investigational vaccine.

If the study is suspended it may resume once concerns about safety, protocol compliance, data quality, etc. are addressed and satisfy the Sponsor, IEC, and/or regulatory authority.

4.7 Early Discontinuation from of The Study

Failure of the participants to comply with the requirements of the protocol will lead to early discontinuation from the study. The discontinuation from the study will be considered by the investigator if it is in the participants or legally acceptable representative's best interest. A participants whose data is complete for all the observations is considered to have completed the study.

It will be specified on the study conclusion page of the CRF as to which of the following reasons were responsible for the withdrawal of the participants from the study.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1525

- Adverse Event/Serious Adverse Event
- Protocol violation
- Consent withdrawal, not due to an adverse event
- Migration from the study site
- Lost to follow-up.
- Pregnancy
- Screen Failure
- Physician decision
- Sponsor termination
- Prohibited Medication
- Death
- Others

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1529

5. Changes/deviations from the planned analysis

The trial has accrued confirmed symptomatic COVID-19 cases faster than expected. Hence, the second interim analysis will be conducted on more than the planned 87 participants with confirmed symptomatic COVID-19. The IWRS system was used for randomization of the participant during the visit. As there are several data entry activities ongoing across all sites in the eDC, the IWRS is considered to have all participants with the intended allocation. Hence, for the purpose of the interim analysis, the unblinded statistician will consider the IWRS dataset. All available participants with confirmed symptomatic COVID-19 cases will be included in the second interim analysis, using IWRS source data instead of eDC data and assuming the ratio of total length of follow-up (placebo to vaccine) is 1. However, the final analysis will be performed based on source data from the eDC on at least 130 confirmed symptomatic COVID-19 cases and the observed ratio Fp/Fv of follow-up time in the placebo group to follow-up time in the vaccine group.

Any deviation in implementing the original statistical plan will be described and justified in the final clinical study report.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1530

6. Surveillance and case identification

In addition, different procedures will be followed to identify potential cases based upon the site. The three categories of procedures are as follows:

6.1 Category 1 (Symptomatic):

In addition to administering the IP, a series of post-dose telephonic follow-up visits will be scheduled to detect suspect symptomatic COVID-19 infections. If a suspect is identified, a nasopharyngeal sample will be collected from the participant for detecting the presence of COVID-19 infection. Telephonic follow-up will occur at 15-day intervals.

6.2 Category 2 (Symptomatic/Asymptomatic):

In addition to administering the IP and periodically detecting suspect symptomatic COVID-19 infections, a series of post-dose Nasopharyngeal samples for detecting incidence of Asymptomatic COVID-19 infection at 1-Month intervals will be collected.

6.3 Category 3 (Symptomatic/Asymptomatic+Immunogenicity):

In addition to administering the IP and periodically detecting suspect symptomatic COVID-19 infections, repeated NP swabs for asymptomatic, a series of blood samples will be collected for analyzing serum for immunological assessments.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1531

7. Analysis populations

Agreement and authorization of participants included/excluded from each analysis population will be reached prior to Interim/final database hard lock. IQVIA and Sponsor will supply a list of all participants to be excluded from the relevant analysis populations, including the reason(s) for exclusion from the analysis populations.

The serum will be collected on Day 0, before vaccination, for assessment of seroprevalence (presence of binding antibody titers to COVID-19) at baseline. At a later time, point, once these samples are analyzed, participants who are positive at baseline will be excluded from immunogenicity and efficacy analyses, but they will continue to be followed up for safety outcomes.

7.1 Enrolled Population

All participants who sign the Informed consent form.

7.2 Randomization Analysis Set

All randomized participants classified according to the study product (vaccine or placebo) to which they were randomized.

7.3 Full Analysis Set (FAS)

All randomized participants who received at least one dose of IP and had no immunologic evidence of prior COVID-19 (i.e, negative against SARS-CoV-2 antibodies) at Visit 1 before the first dose of IP. Participants will be analysed according to the study product (vaccine or placebo) received.

7.4 Per-protocol (PP) Set

All participants in the FAS who received planned doses of IP per schedule, seronegative for SARS-CoV-2 Antibody by ELISA at baseline, and have no major protocol deviations, as determined, and documented by the Sponsor. Participants will be analysed according to the study product (vaccine or placebo) received.

7.5 Immunogenicity Analysis Subset

Designated participants at study sites included in the immunogenicity study (Category 3 and Category 4) who had received both doses of IP.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1532

7.6 Safety Analysis Set (SAS)

The Safety Set consists of all randomized participants who received at least one dose of IP and contributed any solicited AE information, classified according to the study product received.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1533

8. General Considerations

8.1 Visit and date Conventions.

Visit day will be calculated from the reference start date which will be used to present start/stop day of assessments and events. The reference start date is defined as the date of first study drug administration.

The following conventions will be used for visit references:

- $Visit\ day = (date\ of\ event - reference\ start\ date)$ +1
- $Visit\ week = \frac{visit\ day}{7},\ rounding\ up\ to\ next\ whole\ number$
- $Visit\ month = \frac{visit\ day}{30.44},\ rounding\ up\ to\ next\ whole\ number$

8.2 Visit Windows

Inclusion within the visit window should be based on the actual date and not the intended date of the visit. The window for the visits following baseline (including unscheduled visits) will be constructed in such a way that the upper limit of the interval falls half way between the two visits

For laboratory and non-laboratory parameters, unless otherwise specified, if a patient has more than one measurement included within a window, the assessment closest to the target day will be used. In case of ties between observations located on different sides of the target day, the earlier assessment will be used. In case of ties located on the same side of the target day (i.e. more than one value for the same day but different time), the value with the earlier entry date/time will be used

Table - Visit Windows

Assessment	Visit	Month	Target Day	Day Range
Baseline	**Visit 1**	**Month 0**	**<30**

Unscheduled Illness Visit:	**Visit 999**	**US**		**<367**

8.3 Baseline

Baseline is the closest recorded measurement before the administration of the first dose of IP. If the measurement is done on the same day as the first dose and the exact measurement time relative to the first dose is unknown, it will be assumed the measurement is done before the administration of the first dose of IP. If a participants does not receive IP, baseline is the closest recorded measurement on or before the enrolment date.

8.4 End of Study

The end of study date is defined as the date when the last participants is assessed or receives an intervention for evaluation in the study (i.e., last Subject last visit), following any additional parts in the study (e.g., long-term follow-up), as applicable.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1535

8.5 Study Day 1

The first day of study vaccine administration

8.6 Study Dates

Informed Consent (IC) Date

The date on which the study informed consent form is signed.

Screening Date

The screening date is the informed consent (IC) date.

Enrolment Date

The date on which the investigator confirms that the participants has met all eligibility criteria and the enrolment in the study.

End of Study Date

The date recorded on the End of Study eCRF

8.7 Stratifications and Subgroups

In this study primarily BBV152 will be compared with Placebo. For analysis purposes, trial participants may be sub-classified into the following three stratification levels, The three Stratifications of study are as follows

- >=60 years of age with expected ratios of 30-40%
- <60 Year of age and a HCP with expected ratios of upto 5%
- <60 with co-morbid condition with expected ratios of 55-65%

Immunogenicity Subset

Designated participants at study sites included in the immunogenicity study who had a valid immunogenicity test result before the first dose of IP and at least 1 valid result after the first dose of IP, classified according to the study product received.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1536

8.8 Interim analysis

Formal interim analyses are planned when at least approximately 1/3 (43 cases) and 2/3 (87 cases) of the target number of 130 participants with confirmed symptomatic COVID-19 have been accrued, to determine 1) whether vaccine efficacy (VE) has been demonstrated and, if not, 2) whether the sample size and/or length of follow-up should be increased.

The analysis for demonstrated efficacy, with possible early stopping, will test the null hypothesis that VE ≤ 30% using the Lan-DeMets O'Brien-Fleming-like α-spending function framework to define the boundary to be used as a guideline. For 43 of 130 cases at the first interim analysis and 87 of 130 cases at the second interim analysis, the one-sided α for determination of efficacy will be 0.0001 and 0.0061, respectively. This is equivalent to requiring a two-sided 99.98% confidence interval (CI) for VE with lower bound ≥ 30% at the first interim analysis and a two-sided 98.78% CI for VE with lower bound ≥ 30% at the second interim analysis. For interim analyses at exactly 43 and 87 of a total of 130 cases, the test for efficacy ≥ 30% at the final analysis would be done at the one-sided 0.0231 significance level (i.e., the CI for VE would be a two-sided 95.38% CI). If the interim analyses are done at different numbers of cases than 43 and 87, the same boundaries as indicated above will be used, and the test and CI at the final analysis will be adjusted accordingly. The use of these relatively stringent criteria for demonstrated efficacy at the interim analyses means that only a slight correction in the significance level and CI will be necessary at the final analysis if the study is not stopped early.

If needed, the analysis for possible increase of sample size will be done on unblinded data using the method of Chen, DeMets, and Lan. It is planned to increase sample size only for conditional power ≥ 50%, assuming the true VE is as observed in the interim data, or for an unexpectedly low COVID-19 event rate.

In addition to the analyses described above, if efficacy is not demonstrated at the second interim analysis, an analysis for possible early stopping for futility (low efficacy or negative efficacy), using conditional power calculations, will be done. The DSMB will be asked to consider a recommendation to stop the study for futility if conditional power ≤ 20% to show any significant VE (i.e., a two-sided 95% CI for VE with lower bound > 0), assuming true VE = 60%.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1537

Finally, additional interim analyses will be conducted on all severe PCR-confirmed COVID-19 cases occurring since vaccination, if the number of such cases is at least 5. The purpose of these analyses is to identify possible vaccine-associated enhanced disease (VAED) – i.e., severe disease occurring due to the vaccine. The guideline for possible study pausing for these analyses, based on a comparison of proportions of severe cases in vaccine and placebo recipients, will be a one-sided p-value ≤ 0.05 in the direction of a higher proportion of severe cases in vaccine recipients. The test may be done by a z-test of proportions or, for a number of severe cases < 5 in either the vaccine or placebo group, a one-sided Fisher exact test. For example, assuming equal numbers of participants in the two groups, a case split of 5 vaccine: 0 placebo would meet the guideline, by a one-sided Fisher exact test. If the guideline is met, the DSMB may recommend that the study be paused and a thorough review of all severe cases be conducted by the DSMB. After a pause, the study may continue if agreed to by the DSMB and the FDA. These analyses will be done at the time of the interim and final analyses of vaccine efficacy, as long as at least 5 severe cases have occurred, or at other times at the discretion of the DSMB, depending on the observed number of severe cases.

Review of interim efficacy and safety data and recommendations based on the data will be within the purview of the external DSMB. The DSMB may recommend stopping the study because of concerns for participant safety at the time of a formal interim analysis or at any other time it reviews safety data.

The below mentioned analyses will be presented in the interim analysis 2 using PP population set; in most of these analyses, two-sided 95% CIs for VE will be presented. The exception is the analysis of virologically confirmed severe cases of COVID-19, in which a two-sided 90% CI will be presented, and the null hypothesis that the proportion of severe cases in placebo recipients is equal to or higher than the proportion in vaccine recipients will be tested at a one-sided 0.05 significance level by a z-test of proportions or, if the number of severe cases in either group is less than 5, by a Fisher exact test.

- Primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 at least two weeks after the second dose of vaccine or placebo.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1538

- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years).
- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years) with comorbidity.
- Additional analysis on primary endpoint: First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (18 to 59 years) without comorbidity.
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years).
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years) with comorbidity.
- Additional analysis on primary endpoint: first occurrence of virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 in age group (>= 60 years) without comorbidity.
- Secondary endpoint (efficacy): virologically confirmed (RT-PCR positive) severe cases of COVID-19.
- Secondary endpoint (efficacy): virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.

Addendum to CSR will be generated for the extended follow up phase.

8.9 Final analysis

The final analysis of all 25800 participants randomized in the study and of the data collected up to end of the study for all endpoints to be analysed according to the protocol. The final analysis shall be done after the last participant/last visit has been completed.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1539

8.10 Publication of Results

Any formal presentation or publication of data from/ during this trial will be considered jointly between the investigator and the sponsor, as indicated in the contract agreement undersigned by both parties.

8.11 Software

All analyses will be conducted using SAS® Version 9.4.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1540

9. Statistical Considerations

9.1 Multicentre studies

25800 subjects were randomised in 25 sites across India.

9.2 Missing data

Missing data is assumed to be missing and no imputation will be performed. Partial date imputation will be performed for the concomitant medication data please refer appendix 2.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1541

10. Output Presentations

Programs will be developed and maintained and output will be verified in accordance with current risk-based quality control procedures.

Tables, figures, and listings will be produced with validated.

The production environment for statistical analysis consists of statistical analysis software; for example, the SAS System version 9.4 or later.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1542

11. Participant disposition and withdrawal

11.1 Variables and derivations

End of trial classifications are defined as follows.

- Screen failure: Subject for whom informed consent was obtained and documented in writing (i.e., the participant signed an informed consent form), but who did not meet inclusion and exclusion criteria.
- Completed trial: Subjects who completed the trial, as indicated in the Study Phase Disposition eCRF form, will be assumed to have completed trial.
- Discontinued subjects: subjects who discontinued the trial, as indicated in the Study of study eCRF form, will be assumed to have discontinued subjects if at least one partial/full vaccine administrated from trial.

The following parameters will be summarized for the Subject's disposition table as per eCRF:

- Number of screening failure subjects
- Number of Enrolled subjects
- Number of Randomized subjects
- Number of completed subjects.
- Number of discontinued subjects
- in Randomization population Set.
- in FAS population
- in PP population Set.
- in Immunogenicity population Subset.
- in Safety population Set.
- in Category 1 (Symptomatic)
- in Category 2 (Symptomatic/Asymptomatic):
- in Category 3 (Symptomatic/Asymptomatic+Immunogenicity):

The following parameters will be summarised for the study discontinuation table as per eCRF Subject's primary reason for discontinuation (reasons mentioned in eCRF end of study form) which is as follows:

- Adverse Event/Serious Adverse Event
- Protocol violation
- Consent withdrawal
- Migration from the study site

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1543

- Physician decision
- Sponsor termination
- Prohibited Medication
- Death
- Lost to follow-up.
- Others

Derivation:

- indicated as “screen failure” in the eCRF End of study form as “primary reason for study discontinuation” will be assumed screen failure for the trial.
- status is indicated as “COMPLETED” (as per eCRF study End of study form) to ensure that completes as per CRF design.
- Subject status is indicated as “DISCONTINUED” (as per eCRF study EOS form) to ensure that discontinued the as per CRF design.

11.2 Analysis

disposition and Withdrawal will be summarised (frequency and percentages) and the screening failure participants will be summarised (frequency) for the enrolled population by treatment group and participants listing, participant number for the Enrolled Set population by treatment and Subject number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1544

12. Participant demographics and other baseline characteristics

12.1 Variables and derivations

The following demographic and other baseline characteristics will be summarized:

- Age (in Years)
- Age Groups
- Stratification Groups (>= 60 Years age, a HCP and <with any comorbidity)
- Gender
- Race
- Ethnicity
- Height (cm)
- Weight (kg)
- BMI (kg/m2)
- Temperature (°C)
- Results (Serology Test)
- Pregnancy test result
- RT-PCR Result
- Cycle threshold (CT) value - E Gene
- Cycle threshold (CT) value - ORF Gene
- Stable chronic lung disease at baseline
- Stable cardiac disease at baseline
- Severe obesity (body mass index ≥ 35 kg/m2) at baseline
- Controlled Diabetes (Type 1, Type 2) at baseline
- Stable Liver disease at baseline

12.2 Analysis

The following demographic and others baseline characteristics will be summarized for the FAS population by treatment group and presented in data listings for the Randomization Set population by treatment group and Subject number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1545

13. Exposure and Compliance to Study Drug

13.1 Variables and derivations

In eCRF “Vaccine Administration” form we are capturing the treatment dosing related data.

Subject will be considered compliant with overall treatment COVID-19 Vaccine (BBV152) Vaccine/Placebo. if they received the scheduled administration of all doses within the schedule visits

The following parameters will be summarised for the treatment exposure.

- Number of Investigational vaccine administration
- Number of participants that received two doses
- Number of participants that received one dose
- Average number of doses administered.

13.2 Analysis

Treatment exposure and the compliance will be summarised (frequency, missing frequency and percentages) for table for SAF and the listing will be provided for Randomized population set by treatment and Subject number.

.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1546

14. Medical and Co morbidities history

14.1 Variables and derivations

Medical history information will be coded using the MedDRA central coding dictionary Version 23.1 or later. All conditions, which are pre-existing prior to study vaccine administration, must be recorded on the study participant's eCRF

Partial date imputation is not done for Medical and treatment history.

- The following parameters will be summarised for the Subject's Medical history/ Co morbidities as mentioned in eCRF.
- Number of subjects with at least one medical history
- Number of subjects for each medical history by SOC and PT

The following variables will be listed:

- Subject number
- System organ class/ Preferred terms / Reported terms.
- Start date of medical history.
- End date of medical history (If the medical history is ongoing then "Ongoing" text will populate in this variable)

Derivation:

Subject medical history status is indicated as "ongoing" at day 1 (as per eCRF medical history form) is all pre-medical condition at day 1.

14.2 Analysis

Medical history will be summarized by system organ class (SOC), and preferred term (PT), only for the SAF. Medical history/ Co morbidities will be presented as data listings for the randomization population by treatment group and participant number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1547

15. Prior Concomitant, and other medications

15.1 Variables and derivations

In eCRF “Prior or Concomitant Medications” form we are capturing the prior and concomitant medication related data.

All medications will be coded using the WHO Drug dictionary Global B3 format September 1, 2020 or later

‘Prior medications’ are defined any medication prior to first administration of the study drug.

Concomitant medications are defined as any medication taken after or on the first administration of the study drug till the end of the trial.

Prior, Concomitant medication (CM) records will include the medication, Description for CM, Indication, Dose and unit, Frequency, route and start and end date of concomitant medication.

As per eCRF If the question “Was the medication/therapy taken prior to the study” is answered as “YES” then we will consider it as “prior concomitant medication” otherwise If the question “Was the medication/therapy taken prior to the study” is answered as “NO” then we will not consider it as “concomitant medication”

In Appendix 2 the algorithm is given for calculation of partial date imputation for Concomitant Medication and it will be used for partially missing Concomitant Medication start and end date imputation.

The following parameters will be summarised for the Subject’s prior and concomitant medication:

- Number of subjects with at least one prior and concomitant medication
- Number of subjects for each prior and concomitant medication by ATC-2 and PT.

Derivations:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1548

- All medications captured on the “Prior or Concomitant Medications” form of the eCRF will be categorised (prior and concomitant medication), which are identifies as follows:

15.2 Analysis

Prior and concomitant treatment medications will be summarized only for the SAF population and presented in data listings for the Randomization Set population by Treatment group and number.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1549

16. Adverse events

16.1 Variables and derivations

Adverse Events (AEs) will be coded using MedDRA central coding dictionary, Version 23.1 or later.

- An adverse event (AE) is any untoward medical occurrence in a participants or clinical investigation Subject administered an INV and which does not necessarily have a causal relationship with this treatment.

- SAE is any untoward medical occurrence that at any dose: Please refer protocol section 26.5

- Adverse Events of Special Interest (AESI): An AESI can be either serious or non-serious. Serious AESIs will be recorded and reported as per reporting guidelines for SAEs. The following AESIs (if any) will be evaluated during the study period.

    - Anaphylaxis
    - Vaccine-associated enhanced respiratory disease (VAERD)
    - Generalized convulsion

The following parameters will be summarised for the Participants adverse events as mentioned in eCRF.

- Number of Participants with at least one AEs
- Number of Participants with at least one drug related AE.
- Number of Participants with at least one serious AEs
- Number of Participants with at least one drug related serious AEs.
- AEs by Severity
- AEs leading to Death.
- Drug-related AEs leading to Death.
- AEs leading to early withdrawn of study.
- AEs by Age group

Derivations:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1550

- The question “Relationship to study drug” is answered as “Certain”, “Probable/Likely” and “Possible” then respective AEs will be considered as drug related AE.
- the question “Is this AEs serious” is answered as “YES” then respective AE will be considered as serious AEs.
- the question “Is this AEs serious” is answered as “YES” and answered as “Certain”, “Probable/Likely” and “Possible” then respective AEs will be considered as drug related SAEs.
- Subject’s primary reason for discontinuation is “DEATH” then we will consider it as AEs leading to death.
- If Relationship to the investigational product is indicated as “RELATED” and Subject’s primary reason for discontinuation is “DEATH” then we will consider it as drug related AEs leading to death
- Subject’s primary reason for discontinuation ADVERSE EVENT” then we will consider it as AEs leading to early withdrawal from study.

16.2 Analysis

An overall summary will be presented as the number of participants within each of the event type categories described in the sub-sections below, including the incidence of AEs by SOC and PT, unless otherwise specified. Both number of participants, number of event (One subject may be counted more than once) and percentage will be provided for the SAF population.

A data listing with all AEs (including coding details [SOC, PT and verbatim term only]) will be presented for the randomized population set by treatment group and Patient number.

16.2.1 Incidence of AEs

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.2 Incidence of Solicited adverse event.

The incidence of all Solicited Local AEs will be summarised by Local Reaction, by maximum severity and Solicited Systemic AEs (please refer section 24.2 in protocol)

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1551

by alphabetically SOC and PT within each SOC and severity will be presented for the SAF population.

16.2.3 Incidence of Medically Attended Adverse Events (MAAEs)

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.4 Incidence of Adverse Event of Special Interest (AESI)

The incidence of all AEs by alphabetically SOC and PT will be presented for the SAF population.

16.2.5 AEs by severity

The incidence of all AEs will be presented by SOC, PT and severity for the SAF population.

16.2.6 AEs by Outcome

The incidence of all AEs will be presented by SOC, PT and outcome for the SAF population.

16.2.7 Drug-related AEs

The incidence of all drug related AEs will be presented by SOC and PT for the SAF population.

16.2.8 Serious AEs

Serious AEs are defined as AEs for which seriousness is indicated as “yes”.

The incidence of all serious AEs will be presented by SOC and PT. A data listing of serious adverse events (SAEs) will also be presented for the SAF population.

16.2.9 AEs leading to early withdrawal from study.

The incidence of all serious AEs leading to early withdrawal will be presented by SOC and PT. A data listing of AEs leading to early withdrawal from study will be presented for the SAF population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1552

16.2.10 AEs leading to death.

The incidence of all AEs leading to death will be presented by SOC and PT. A data listing of all AEs for deceased participants will be presented for the SAF population.

16.2.11 AEs Age wise adverse events

The incidence of all AEs leading to death will be presented by SOC and PT. A data listing of all AEs for deceased participants will be presented for the SAF population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1553

17. Vital (Including Pulse Oximetry) &General & Systemic Examination

All summaries for vital signs will be based on the SAF population, unless otherwise specified. Data listings for the will be based on the ITT population.

17.1 Variables and derivations

For vital signs, baseline is defined as the last observation made prior to the first administration of study drug.

The following vital signs will be reported for this study:

- Temperature (°C)
- Pulse (beats/min)
- Systolic blood pressure (mmHg)
- Diastolic blood pressure (mmHg)
- Respiratory rate (breaths/min)
- Oxygen saturation (SpO2) %

17.2 Analysis

The Vital sign will be summarized by visit for the SAF. presented in data listings for the Randomized population by treatment group and Subject number Vital sign test and by visit.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1554

18. General Examination

18.1 Variables and derivation

The General examination will be measure on scheduled visits (visit 1 through visit 7)

General Examination for Body systems parameters will be examined as follows:

- Pallor
- Cyanosis
- Hair
- Nails
- Icterus
- Edema
- Lymphadenopathy
- Other General examination observation

These above other general examination observation measurements will be categorised and summarised as follow:

- NORMAL
- ABNORMAL

Note: If the General examination data will be found missing then new category “MISSING” will be added in the summary table.

18.2 Analysis

The General examination will be summarized by visit for the SAF. presented in data listings for the Randomized population by treatment group and Subject number, General examination test and by visit.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1555

19. Primary endpoint assessments

The primary endpoint parameter is mention below.

19.1 Variables and derivations

19.1.1 First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19.

The following variables will be reported for this study:

- Start Date of dose administration ("Vaccine Administration" form in eCRF)
- The symptomatic COVID-19 cases include any participant who meets the Case Definitions for Symptomatic Endpoint or Severe Symptomatic COVID-19
- Start Date of Virologically confirmed
- Time Frame: Day 42 to Month 12.

Derivation:

Follow-up (days)= (date of Last followup – Date of Day 42) +1

Total length of follow up (years) in vaccine/placebo = sum (Follow-up (days))/ 365.25 in respective treatment group.

19.2 Primary endpoint analysis

Estimation of vaccine efficacy (VE) in this study is based on person-time incidence rates: VE = 1 – (nv/Fv)/ (np/Fp) = 1 – R, where R = (nv/Fv) / (np/Fp); nv and np are the numbers of participants who develop PCR-confirmed symptomatic COVID-19 among BBV152 vaccine and placebo recipients, respectively, and Fv and Fp are the corresponding total lengths of follow-up in years in the two groups, with follow-up in years defined as a follow-up in days divided by 365.25. VE will typically be expressed as a percentage. We assume that nv and np follow Poisson distributions with respective parameters λvFv and λpFp; the true (unknown) VE is 1 – λv / λp. Then, conditional on n = nv + np, the total number of participants who develop symptomatic COVID-19, the number nv in the vaccine group follows a binomial distribution with n trials and probability parameter λvFv / (λvFv + λpFp), estimated by P = nv / (nv+np). The estimate VE can be given in terms of P and the ratio h = Fp/Fv, which is expected to be very close to 1, since by the above definitions R = hP / (1-P) and thus VE = 1 –

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1556

hP / (1-P). A two-sided confidence interval (CI) around the estimated VE will be obtained by converting an exact CI around the estimated probability parameter P, using the observed h = Fp/Fv, to a CI for VE. If (PL, PU) is the CI around P, the CI for VE will be [1 – hPU/(1-PU), 1 – hPL/(1-PL)].

The primary analysis of VE will be based on the per-protocol population, excluding participants who were positive for binding antibody titters to SARS-CoV-2 on Day 0, with follow-up for each participant beginning 14 days after the second dose of vaccine or placebo and continuing until the onset of a confirmed COVID-19 case, a protocol deviation that could affect the risk of COVID-19 (for example, receipt of another vaccine against a viral disease), or the end of follow-up. To keep the overall type I error rate for estimating VE at two-sided 0.05, the CI for VE will be adjusted from a 95% CI as needed to account for interim analyses.

Additionally, the same analysis will be performed using the FAS population. Also, subgroup analyses will be done by age group (18-59 years and 60+ years) and by subgroups with and without co-morbidities, using the per-protocol population.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1557

20. Secondary Endpoints (Efficacy)

20.1 First occurrence of Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19 based on the case definition for the secondary efficacy symptomatic endpoint. [Time Frame: Day 42 to Month 12].

20.1.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.2 Virologically confirmed (RT-PCR positive) severe cases of COVID-19. [Time Frame: Day 42 to Month 12].

20.2.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.3 Virologically confirmed COVID-19 cases of any severity occurring among participants 18 through 59 years of age and ≥60 years of age. [Time Frame: Day 42 to Month 12].

20.3.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) severe cases of COVID-19
- Start Date of Virologically confirmed

20.4 Virologically confirmed COVID-19 asymptomatic cases. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1558

[Time Frame: Month 2 to Month 12].

20.4.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) asymptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at time of enrolment

20.5 Virologically confirmed COVID-19 asymptomatic and symptomatic cases occurring from two weeks after the second vaccination. Excludes cases in which vaccination was incomplete, and cases detected among individuals who were positive by serology at the time of enrolment. [Time Frame: Month 2 to Month 12]

20.5.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) asymptomatic and symptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at time of enrolment

20.6 The number of participants with virologically confirmed COVID-19 deaths. [Time Frame: Day 42 to Month 12].

20.6.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) cases of COVID-19
- Start Date of Virologically confirmed
- Date of death (related to COVID-19)

20.7 The number of participants with virologically confirmed symptomatic COVID-19. Includes cases that were seropositive at baseline. Excludes cases in which vaccination was incomplete. [Time Frame: Day 42 to

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1559

Month 12].

20.7.1 Variables and derivations

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Virologically confirmed (RT-PCR positive) symptomatic cases of COVID-19
- Start Date of Virologically confirmed
- Serology results at baseline

20.8 Analyses

Vaccine efficacy will be estimated for confirmed symptomatic SARS-CoV-2 infection in the vaccinated population, excluding participants who were seropositive for SARS-CoV-2 on Day 0 and any participants who inadvertently received one dose of vaccine and one dose of placebo. In addition, VE will be estimated for the period between the first dose and 14 days after the second dose.

Other secondary efficacy analyses will compare the treatment groups with regard to 1) severe PCR confirmed COVID-19 disease and 2) PCR-confirmed SARS-CoV-2 infection, regardless of symptomatology. In addition, VE estimation will be done in linear models with the study site as a random effect and with adjustment for covariates (e.g., age, presence of co-morbidities at baseline). These analyses will be done for endpoint events with onset 14 days or more after the second dose and also for all participants with events after the first dose. VE and its 95% CI will be estimated as in the primary analysis PP populations. Additional that same analysis will be perform for stratification analysis.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1560

21. Secondary Endpoints (Safety)

21.1 Serious Adverse Events (SAEs) occurring at any time in all study participants; SAE rates will be analyzed when the primary efficacy endpoint (130 cases) is reached and at the study end.

21.1.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of SAE (“Adverse Event” form in eCRF)
- Is this AE (“Adverse Event” form in eCRF)
- Causality related to Treatment.
- Seriousness of SAEs
- Death date
- Number of Death

Time Frame: Throughout the study period]. Data will be collected on immediate adverse events (AEs) within 2 hours of vaccination,

21.1.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Serious adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.2 Solicited local and systemic adverse events (AEs).

21.2.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Solicited local and systemic adverse events (“AE form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

Time Frame: within 7 days post each vaccination,

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1561

21.2.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Solicited local and systemic adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.3 Unsolicited adverse events (AEs) occurring between the vaccination and 28 days after the final vaccination, among all study participants.

21.3.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of unsolicited local and systemic adverse events (“Post Vaccination in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)
- Time Frame: Within 28 days post vaccination,

21.3.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of unsolicited local and systemic adverse events will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.3.3 Immediate adverse events with 30 minutes of vaccination

21.3.4 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Solicited local and systemic adverse events (“AE form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)
- Time Frame: within 30 minutes post each vaccination.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1562

21.3.5 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Immediate adverse events with 30 minutes will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.4 Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period

21.4.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period (“AEs form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.4.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of Medically attended adverse events (MAAEs) or AEs leading to withdrawal through the entire study period will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.5 The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial of hospitalization.

21.5.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1563

- Start Date of enhanced respiratory disease episodes reported events (“AEs form in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.5.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of The occurrence of enhanced respiratory disease episodes reported by patient/documented in hospital records throughout the trial of hospitalization will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

21.6 Adverse Event of Special Interest (AESI).

21.6.1 Variables and derivations

The following variables will be reported for this study:

- Start Date of dose administration (“Vaccine Administration” form in eCRF)
- Start Date of adverse Event of Special Interest (AESI) (“AEs in eCRF form)
- Is this AE (“Adverse Event” form in eCRF)

21.6.2 Analyses

Summary statistics (frequency, percentage, point estimable, 95% CI using Clopper–Pearson exact test) of adverse Event of Special Interest (AESI) will be calculated for Safety analysis set treatment group wise. Rates of events and the corresponding two-sided exact CIs will be presented. Rates will be compared between treatment groups using two-sided z-tests.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1564

22. Secondary Endpoints (Immunogenicity)

22.1 Geometric Mean Titer (GMT) of SARS-CoV-2 Specific Neutralizing Antibody (nAb)

22.1.1 Variables and derivations

Neutralizing Antibody (nAb)

[Time Frame: Month 0 to Month 12]

22.1.2 Analyses

GMTs of SARS-CoV-2 Specific Neutralizing Antibody (nAb) will be summarised by point estimate and the corresponding 95% CI. Summary statistics for nAb (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS. Analysis will be done based on Immunogenicity analysis set.

22.2 Geometric Mean Fold Rise (GMFR) of SARS-CoV-2 Specific Neutralizing Antibody (nAb

22.2.1 Variables and derivations

Neutralizing Antibody (nAb)

[Time Frame: Month 0 to Month 12]

22.2.2 Analyses

GMFR of SARS-CoV-2 Specific Neutralizing Antibody (nAb) will be summarised by point estimate and the corresponding 95% CI. Analysis will be done based on Immunogenicity analysis set.

22.3 Geometric Mean Titer (GMT) of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb).

22.3.1 Variables and derivations

Anti- S1 IgG, Anti-N IgG, Anti-RBD, IgG

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1565

[Time Frame: Month 0 to Month 12]

22.3.2 Analyses

GMTs of SARS-CoV-2 S1 protein-specific Binding Antibody (bAb) will be summarised by point estimate and the corresponding 95% CI. Summary statistics for bAb (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS based on S1 protein-specific binding antibody titer. Analysis will be done based on Immunogenicity analysis set.

22.4 Lot-to-Lot consistency will be assessed based on the neutralizing titer of the three consistency lots used in the trial.

22.4.1 Variables and derivations

Microneutralization Test (MNT_{50}) and Plaque Reduction Neutralization Test ($PRNT_{50}$)

[Time Frame: Month 0 to Month 12]

22.4.2 Analyses

A total of 600 participants were randomised to the BBV152 lot consistency study in a 3:1 ratio of Vaccine to Placebo (Lot 1, Lot 2, Lot 3, Placebo)). The 3 lots were 3 consecutively manufactured lots. Thus, 450 participants (150 in each lot) in the BBV152 group and 150 participants in the Placebo group were included. The analysis of lot consistency will be based on the GMTs of neutralizing antibodies at Day 56. Summary statistics for neutralizing antibody titer at Day 56 (n, mean, SD, median, Q1 and Q3, 95% CI of Mean, geometric mean, 95% CI of geometric mean) will be calculated using PROC MEANS. Analysis will be done based on Immunogenicity analysis set.

GMT ratios of neutralizing antibodies at Day 56 for each pair of lots (point estimate and 95% confidence interval) will be calculated. The 95% CIs will be calculated from CIs on differences between means of log10(titer), using SAS PROC TTEST).

Lot consistency will be assessed using the criterion that 95% CIs for GMT ratios for all pairs of lots must be contained within the interval [0.5, 2.0], as well as the criterion that all 95% CIs for GMT ratios must be within the interval [0.67, 1.5] for US-FDA.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1566

23. Revision history

Version	Date	Change
1	23-Feb-2021	Initial Version
2	09-Apr-2021	Section 5, 8.8, 19 and 22 updated. Variables added in the section 20.4 to 20.7

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1567

24. Appendix 1: Programming Conventions for Tables, Data Listings and Figures (TLFs)

All percentages (%) for a specific summary are calculated using the total number of subjects included in the relevant analysis population as the denominator, unless otherwise specified.

Data listings will be based on all subjects, unless otherwise specified.

In general, if we have no response or record for respective parameter in data (i.e. n=0) then while presenting statistics in table only n will be presented as “0” and other statistics will be left blank. In case, we have only one response or record for respective parameter (i.e., n=1) in data then statistic (S.D) in table will be presented blank.

By default, for continuous measures, summary statistics will include, unless otherwise specified:

• Sample Size (N)
- n
- Mean
- Median
- Maximum
- Minimum
- SDs, and
- Frequency of Missing Values.

For categorical measures, summary statistics will include, unless otherwise specified:

- Sample Size (n)
- Frequency of non-missing values
- Percentage, and
- Frequency of Missing Values.

For efficacy tables, below statistics will be included, unless otherwise specified:

- Estimate
- 95 % Confidence Interval
- P-value

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1568

24.1 Paper Size, Orientation and Margins

The margin, page size and line size specifications as stipulated in Table 23.1 will be used for the presentation of all TLFs.

Table 23.1: Output margin, page size and line size specifications

	Landscape	Portrait
Margins (Inches):		
Top	1.25	1
Bottom	1	1
Left	1	1.25
Right	1	1
Header (Inches)	0.5	0.5
Footer (Inches)	0.5	0.5
SAS® specifications:		
PAGESIZE	46	67
LINE SIZE	134	93
Body Font Size	10	10
Heading font Size	12	12

24.2 Fonts

The font type “Times New Roman” must be used for tables, listings, and figures, with a font size of minimum 9 and it should be consistent for the whole report. The font colour must be black for tables, listings, and figures.

Colours are allowed for figures if the data series can be distinguished clearly if printed in black and white paper.

24.3 Header Information

Headers should be defined as follows:

- The header should be placed at the top of the page (same place on each page).
- The header should be placed at the top of the page (same place on each page).
- The sponsor name should appear in row 1, left-aligned in header.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1569

- The word “Interim Analysis/Final analysis” would be appeared in row 1, centered aligned in header.
- The protocol number should appear in row 2, left-aligned in header.
- The word “Cut-off date: DDMMMYYYY” would appear in row 2, centre aligned in header
- The word “CONFIDENTIAL” should appear in row 1, centered aligned at footer in compiled file only.
- The TLF identification number should appear in row 3, centered in header.
- The TLF title should start in row 4, centered in header.
- The TLF population should appear in row 5, centered in header. The population should be spelled out in full, e.g., Enrolled Analysis Set.
- Row 6 in header should be a continuous row of underscores (‘_’) (the number of underscores should equal the line size).
- Row 7 in header should be a blank line.
- Sentence case should be used for titles in header.
- Titles should not contain quotation marks or footnote references.
- The column headings should be underlined with a row of underscores (‘_’).
- Column headings spanning more than one column should be underlined and have underscores on either side of the title and should be centered.
- Column headings containing numbers should be centered.
- Column headings would be in mixed case.
- In general, the analysis population count should appear in the column header in the form “(N=XX)”.
- The page identification in the format Page X of Y (where Y is the total number of pages for the TLF) should appear in row 2, right aligned at Footer for compiled TLFs if required.

24.4 Table and Data Listing Table, Listing and Figure (TLF) Conventions

24.4.1 General

- The first row in the body of the table or data listing will be blank.
- The left-hand column should start in Column 1.
- Rounding will be done with the SAS® function ROUND if applicable.
- Numerical values in tables should be rounded and not truncated as per section (26.4.2) for respective statistics.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1570

- Numerical values will be center aligned.
- Text values should be left aligned.
- The first letter of a text entry should be capitalized.
- The study drug will be appeared first in tables with treatment group as columns.
- The width of the TLF should match the line size.

24.4.2 Univariate statistics

- Statistics should be presented in the same order across tables (i.e., n, mean, SD, minimum, median and maximum).
- If the original data has N decimal places, then the summary statistics would have the following decimal places:
- Minimum, maximum: N.
- Mean and median: N +1.
- SD: N + 2.
- CI: N+1
- Point estimate: N+1.

24.4.3 Frequencies and percentages [n, (m) and %]

- Count values should be reported, with one space between the right the percent inside parentheses and the left the mention. Parentheses should be justified to accept a maximum of 100.0 as a value and padded with blank space if the percent is less than 100.0. An example is given below:
- 156, 77, (100.0)
- 56, 50, (64.9)
- 0, (0.0)
- Percent values should be reported inside parentheses, with one space between the right parenthesis of the mention and the left parenthesis of the percentage. Parentheses should be justified to accept a maximum of 100.0 as a value and padded with blank space if the percent is less than 100.0. An example is given below:
- 77 (100.0)
- 50 (64.9)
- 0 (0.0)
- Percentages may be reported to 0 decimal places as appropriate (for example, where the denominator is relatively small).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1571

- Where counts are zero, mentions of 0 and percentages of 0.0 should appear in the table.

24.4.4 Confidence intervals (CIs)

- CIs would be presented with one additional decimal place as that of the raw data.
- CIs will be presented as [lower bound, upper bound].

24.4.5 P-values

- P-values should be reported to four decimal places.

24.4.6 Ratios/Estimate

- Ratios/estimate would be reported with one additional decimal place as that of the raw data.

24.4.7 Spacing

- There should be a minimum of 1 blank space between columns (preferably 2).

24.4.8 Missing values

- A “0” should be used to indicate a zero frequency.
- A blank will be used to indicate missing data in data listings.

24.5 Tables, Listings and Figure output conventions

The compiled file will be presented in PDF format with TOC for listing and table/figures separately.

The Table, Listing and Figures will be provided in RTF and PDF files using the SAS® Output Delivery System (ODS) and in addition all listings also be provided in excel file.

All percentages (%) for a specific summary are calculated using the total number of subjects included in the relevant analysis population as the denominator, unless otherwise specified.

Data listings will be based on all subjects treated, unless otherwise specified.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1572

By default, descriptive statistics for quantitative measurements will include the number of subjects (n), mean, standard deviation (SD), minimum, median and maximum.

24.6 Dates and times

In footer of the TLFs date and time will be presented in format ddmmyyyy and hh: mm. and Depending on data available, dates and times will take the form ddmmyyyy and hh:mm.

24.7 Spelling format

The spelling format to be used is English US.

24.8 Presentation of treatment

Treatment: BBV152 vaccine and placebo,

24.9 Presentation of visits

- Baseline (Month 0)
- Visit 1 (Month 1+2 days)
- Visit 3 (Month 2±1 week
- Visit 4 (Month 3±1 week)
- Visit 5 (Month 4±1 week)
- Visit 6 (Month 5±1 week):
- Visit 7 (Month 6±1 week)
- Visit 8 (Month 7±1 week):
- Visit 9 (Month 8±1 week
- Visit 10 (Month 9±1 week)
- Visit 11 (Month 10±1 week)
- Visit 12 (Month 11±1 week)
- Visit 13 (Month 12±1 week):

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1573

25. Appendix 2: Partial date conventions and Concomitant medication guidelines

The whole missing date will not be imputed for this study and only partial date imputation will be performed. Conventions pertaining to partial dates are presented.

25.1 Table: Algorithm for partial date imputation for Concomitant Mediation's (CM)

Concomitant Medication	Missing	Imputation
Start Date	Day	If CM start Month = Treatment starts month and CM start Year = Treatment start Year, then CM start Day= minimum of (Treatment Start Day or CM end Day) Otherwise CM start day = "01"
	Day and Month	If CM start Year = Treatment start Year, then CM start Day and Month = minimum of (Treatment Start Day and Month or CM end Day and Month) Otherwise CM start Day and Month = "01 Jan"
	Day, Month and Year	No Imputation will be performed.
End Date	Day	If CM End Month = Study conclusion Month and CM End Year= Study conclusion Year, Then CM End Day= Study Conclusion Day Otherwise CM End Day = last day of respective month
	Day and Month	If CM End Year = Study Conclusion Year, then CM End Day and Month = Study Conclusion Day and Month Otherwise CM End Day and Month = "31 Dec"

Preface

Public Comment

This guidance is being issued to address the coronavirus disease 2019 (COVID-19) public health emergency. This guidance is being implemented without prior public comment because the Food and Drug Administration (FDA or Agency) has determined that prior public participation for this guidance is not feasible or appropriate (see section 701(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 371(h)(1)(C)) and 21 CFR 10.115(g)(2)). This guidance document is being implemented immediately, but it remains subject to comment in accordance with the Agency's good guidance practices.

Comments may be submitted at any time for Agency consideration. Submit written comments to the Dockets Management Staff (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. Submit electronic comments to https://www.regulations.gov. All comments should be identified with the docket FDA-2020-D-1137 and complete title of the guidance in the request.

Additional Copies

Additional copies are available from the FDA webpage titled "COVID-19-Related Guidance Documents for Industry, FDA Staff, and Other Stakeholders," *available at* https://www.fda.gov/emergency-preparedness-and-response/mcm-issues/covid-19-related-guidance-documents-industry-fda-staff-and-other-stakeholders, the FDA webpage titled "Search for FDA Guidance Documents," *available at* https://www.fda.gov/regulatory-information/search-fda-guidance-documents, and the FDA webpage titled "Biologics Guidances," *available at* https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances. You may also send an email request to ocod@fda.hhs.gov to receive an additional copy of the guidance. Please include the docket number FDA-2020-D-1137 and complete title of the guidance in the request.

Questions

For questions about this document, contact the Office of Communication, Outreach, and Development (OCOD) by email at ocod@fda.hhs.gov or at 800-835-4709 or 240-402-8010.

Guidance for Industry

This guidance represents the current thinking of the Food and Drug Administration (FDA or Agency) on this topic. It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations. To discuss an alternative approach, contact the FDA staff responsible for this guidance as listed on the title page.

I. INTRODUCTION

FDA plays a critical role in protecting the United States from threats such as emerging infectious diseases, including the Coronavirus Disease 2019 (COVID-19) pandemic which has been caused by the severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). FDA is committed to providing timely guidance to support response efforts to this pandemic.

FDA is issuing this guidance to assist sponsors in the clinical development and licensure of vaccines for the prevention of COVID-19.

This guidance is intended to remain in effect for the duration of the public health emergency related to COVID-19 declared by the Secretary of Health and Human Services (HHS) on January 31, 2020, effective January 27, 2020, including any renewals made by the HHS Secretary in accordance with section 319(a)(2) of the Public Health Service Act (PHS Act) (42 U.S.C. 247d(a)(2)). The recommendations described in the guidance are expected to assist the Agency and sponsors in the clinical development and licensure of vaccines for the prevention of COVID-19 and reflect the Agency's current thinking on this issue.

Given this public health emergency, and as discussed in the Notice in the *Federal Register* of March 25, 2020, titled "Process for Making Available Guidance Documents Related to Coronavirus Disease 2019" (85 FR 16949), *available at* https://www.govinfo.gov/content/pkg/FR-2020-03-25/pdf/2020-06222.pdf, this guidance is being implemented without prior public comment because FDA has determined that prior public participation for this guidance is not feasible or appropriate (see section 701(h)(1)(C) of the Federal Food, Drug, and Cosmetic Act (FD&C Act), (21 U.S.C. 371(h)(1)(C)), and 21 CFR 10.115(g)(2)). This guidance document is being implemented immediately, but it remains subject to comment in accordance with the Agency's good guidance practices. However, FDA expects that the recommendations set forth in this revised guidance will continue to apply outside the context of the current public health emergency.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1579

Therefore, within 60 days following the termination of the public health emergency, FDA intends to revise and replace this guidance with an updated guidance that incorporates any appropriate changes based on comments received on this guidance and the Agency's experience with implementation.

In general, FDA's guidance documents, including this guidance, do not establish legally enforceable responsibilities. Instead, guidances describe the Agency's current thinking on a topic and should be viewed only as recommendations, unless specific regulatory or statutory requirements are cited. The use of the word *should* in Agency guidance means that something is suggested or recommended, but not required.

II. BACKGROUND

There is currently an outbreak of respiratory disease caused by a novel coronavirus. The virus has been named "SARS-CoV-2" and the disease it causes has been named "COVID-19." On January 31, 2020, the Secretary of HHS issued a declaration of a public health emergency related to COVID-19 and mobilized the Operating Divisions of HHS.[1] In addition, on March 13, 2020, the President declared a national emergency in response to COVID-19.[2]

The SARS-CoV-2 pandemic presents an extraordinary challenge to global health. There are currently no FDA-licensed vaccines to prevent COVID-19. Commercial vaccine manufacturers and other entities are developing COVID-19 vaccine candidates using different technologies including RNA, DNA, protein, and viral vectored vaccines.

This guidance describes FDA's current recommendations regarding the data needed to facilitate clinical development and licensure of vaccines to prevent COVID-19. There are currently no accepted surrogate endpoints that are reasonably likely to predict clinical benefit of a COVID-19 vaccine. Thus, at this time, the goal of development programs should be to pursue traditional approval via direct evidence of vaccine safety and efficacy in protecting humans from SARS-CoV-2 infection and/or clinical disease.

This guidance provides an overview of key considerations to satisfy regulatory requirements set forth in the investigational new drug application (IND) regulations in 21 CFR Part 312 and licensing regulations in 21 CFR Part 601 for chemistry, manufacturing, and controls (CMC), and nonclinical and clinical data through development and licensure, and for post-licensure safety evaluation of COVID-19 preventive vaccines.[3] FDA is committed to supporting all scientifically sound approaches to attenuating the clinical impact of COVID-19. Sponsors engaged in the development of vaccines to prevent COVID-19 should also see the guidance for industry and investigators, *COVID-19 Public Health Emergency: General Considerations for Pre-IND Meeting Requests for COVID-19 Related Drugs and Biological Products* (Ref. 1).

---

[1] Secretary of Health and Human Services Alex M. Azar, Determination that a Public Health Emergency Exists. (Jan. 31, 2020, renewed April 21, 2020), *available at* https://www.phe.gov/emergency/news/healthactions/phe/Pages/default.aspx.

[2] Proclamation on Declaring a National Emergency Concerning the Novel Coronavirus Disease (COVID-19) Outbreak (Mar. 13, 2020), *available at* https://www.whitehouse.gov/presidential-actions/proclamation-declaring-national-emergency-concerning-novel-coronavirus-disease-covid-19-outbreak/.

[3] Novel devices used to administer COVID-19 vaccines raise additional issues which are not addressed in this guidance.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1580

There are many COVID-19 vaccines currently in development and FDA recognizes that the considerations presented here do not represent all the considerations necessary to satisfy statutory and regulatory requirements applicable to the licensure of vaccines intended to prevent COVID-19. The nature of a particular vaccine and its intended use may impact specific data needs. We encourage sponsors to contact the Center for Biologics Evaluation and Research (CBER) Office of Vaccines Research and Review (OVRR) with specific questions.

III. CHEMISTRY, MANUFACTURING, AND CONTROLS – KEY CONSIDERATIONS

A. General Considerations

- COVID-19 vaccines licensed in the United States must meet the statutory and regulatory requirements for vaccine development and approval, including for quality, development, manufacture, and control (section 351(a) of the Public Health Service Act (PHS Act), (42 U.S.C. 262)). The vaccine product must be adequately characterized and its manufacture in compliance with applicable standards including current good manufacturing practice (cGMP) (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and 21 CFR Parts 210, 211, and 610). It is critical that vaccine production processes for each vaccine are well defined and appropriately controlled to ensure consistency in manufacturing.

- COVID-19 vaccine development may be accelerated based on knowledge gained from similar products manufactured with the same well-characterized platform technology, to the extent legally and scientifically permissible. Similarly, with appropriate justification, some aspects of manufacture and control may be based on the vaccine platform, and in some instances, reduce the need for product-specific data. FDA recommends that vaccine manufacturers engage in early communications with OVRR to discuss the type and extent of chemistry, manufacturing, and control information needed for development and licensure of their COVID-19 vaccine.

B. Manufacture of Drug Substance and Drug Product

- Data should be provided to show that all source material used in manufacturing is adequately controlled, including, for example, history and qualification of cell banks, history and qualification of virus banks, and identification of all animal derived materials used for cell culture and virus growth.

- Complete details of the manufacturing process must be provided in a Biologics License Application (BLA) to support licensure of a COVID-19 vaccine (21 CFR 601.2). Accordingly, sponsors should submit data and information identifying critical process parameters, critical quality attributes, batch records, defined hold times, and the in-process testing scheme. Specifications should be established for

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1581

each critical parameter. Validation data from the manufacture of platform-related products may provide useful supportive information, particularly in the identification of critical parameters.

- In-process control tests must be established that allow quality to be monitored for each lot for all stages of production (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.110(a)).

- Data to support the consistency of the manufacturing process should be provided, including process validation protocols and study reports, data from engineering lots, and drug substance process performance qualification.

- The manufacturing process must be adequately validated (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.100(a) and 211.110). Validation would typically include a sufficient number of commercial-scale batches that can be manufactured routinely, meeting predetermined in-process controls, critical process parameters, and lot release specifications. Typically, data on the manufacture of at least three commercial-scale batches are sufficient to support the validation of the manufacturing process (Ref. 2).

- A quality control system should be in place for all stages of manufacturing, including a well-defined testing program to ensure in process/intermediate product quality and product quality throughout the formulation and filling process. This system should also include a well-defined testing program to ensure drug substance quality profile and drug product quality for release. Data on the qualification/validation for all quality indicating assays should be submitted to the BLA to support licensure.

- All quality-control release tests, including key tests for vaccine purity, identity and potency, should be validated and shown to be suitable for the intended purpose. Release specifications are product specific and will be discussed with the sponsor as part of the review of a BLA.

- If adequately justified, final validation of formulation and filling operations may be completed after product approval if the impact on product quality is not compromised. It is important that any data that will be submitted after product approval be agreed upon prior to licensure and be submitted as a postmarketing commitment using the appropriate submission category.

- For vaccine licensure, the stability and expiry date of the vaccine in its final container, when maintained at the recommended storage temperature, should be demonstrated using final containers from at least three final lots made from different vaccine bulks.

- Storage conditions, including container closure integrity, must be fully validated (21 CFR 211.166).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1582

- The vaccine must have been shown to maintain its potency for a period equal to that from the date of release to the expiry date (21 CFR 601.2 and 610.10). Post marketing commitments to provide full shelf life data may be acceptable with appropriate justification.

- A product specific stability program should be established to verify that licensed product maintains quality over the defined shelf life.

C. Facilities and Inspections

- Facilities must be of suitable size and construction to facilitate operations and should be adequately designed to prevent contamination, cross-contamination and mix-ups (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable,21 CFR 211.42(a)). All utilities (including plumbing and sanitation) must be validated, and HVAC systems must provide adequate control over air pressure, micro-organisms, dust, humidity, and temperature, and sufficient protection or containment as needed (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.46(c)) (Ref. 3). Facility and equipment cleaning and maintenance processes must be developed and validated (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.56(c) and 211.67(b)).

- Manufacturing equipment should be qualified and sterile filtration and sterilization processes validated. Aseptic processes should be adequately validated using media simulations and personnel should be trained and qualified for their intended duties.

- A quality control unit must be established and must have the responsibility for oversight of manufacturing, and review and release of components, containers and closures, labeling, in-process material, and final products (section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)) and, as applicable, 21 CFR 211.22). The quality control unit must have the responsibility for approving validation protocols, reports, investigate deviations, and institute corrective and preventive actions.

- FDA recommends that vaccine manufacturers engage in early communication with CBER's Office of Compliance and Biologics Quality, Division of Manufacturing and Product Quality to discuss facility preparation and inspection timing.

- Pre-license inspections of manufacturing sites are considered part of the review of a BLA and are generally conducted following the acceptance of a BLA filing (21 CFR 601.20). During the COVID-19 public health emergency, FDA is utilizing all available tools and sources of information to support regulatory decisions on applications that include sites impacted by FDA's ability to inspect due to COVID-19. During this interim period, we are using additional tools, where available, to determine the need for an on-site inspection and to support the

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1583

application assessment, such as reviewing a firm's previous compliance history, and requesting records in advance of or in lieu of on-site inspections or voluntarily from facilities and sites.

IV. NONCLINICAL DATA – KEY CONSIDERATIONS

A. General Considerations

- The purpose of nonclinical studies of a COVID-19 vaccine candidate is to define its immunogenicity and safety characteristics through *in vitro* and *in vivo* testing. Nonclinical studies in animal models[4] help identify potential vaccine related safety risks and guide the selection of dose, dosing regimen, and route of administration to be used in clinical studies. The extent of nonclinical data required to support proceeding to first in human (FIH) clinical trials depends on the vaccine construct, the supportive data available for the construct and data from closely related vaccines.

- Data from studies in animal models administered certain vaccine constructs against other coronaviruses (SARS-CoV and MERS-CoV) have raised concerns of a theoretical risk for COVID-19 vaccine-associated enhanced respiratory disease (ERD). In these studies, animal models were administered vaccine constructs against other coronaviruses and subsequently challenged with the respective wild-type virus. These studies have shown evidence of immunopathologic lung reactions characteristic of a Th-2 type hypersensitivity similar to ERD described in infants and animals that were administered formalin-inactivated respiratory syncytial virus (RSV) vaccine and that were subsequently challenged with RSV virus due to natural exposure or in the laboratory, respectively (Refs. 4-9). Vaccine candidates should be assessed in light of these studies as described in section D, below.

- FDA recommends that vaccine manufacturers engage in early communications with FDA to discuss the type and extent of nonclinical testing required for the particular COVID-19 vaccine candidate to support proceeding to FIH clinical trials and further clinical development.

B. Toxicity Studies (Refs. 10-14)

- For a COVID-19 vaccine candidate consisting of a novel product type and for which no prior nonclinical and clinical data are available, nonclinical safety studies will be required prior to proceeding to FIH clinical trials 21 CFR 312.23(a)(8).

[4] The preclinical program for any investigational product should be individualized with respect to scope, complexity, and overall design. We support the principles of the "3Rs," to reduce, refine, and replace animal use in testing when feasible. Proposals, with justification for any potential alternative approaches (e.g., in vitro or in silico testing), should be submitted during early communication meetings with FDA (see section VI of this document). We will consider if such an alternative method could be used in place of an animal test method.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1584

- In some cases, it may not be necessary to perform nonclinical safety studies prior to FIH clinical trials because adequate information to characterize product safety may be available from other sources. For example, if the COVID-19 vaccine candidate is made using a platform technology utilized to manufacture a licensed vaccine or other previously studied investigational vaccines and is sufficiently characterized, it may be possible to use toxicology data (e.g., data from repeat dose toxicity studies, biodistribution studies) and clinical data accrued with other products using the same platform to support FIH clinical trials for that COVID-19 vaccine candidate. Vaccine manufacturers should summarize the findings and provide a rationale if considering using these data in lieu of performing nonclinical safety studies.

- When needed to support proceeding to FIH clinical trials, nonclinical safety assessments including toxicity and local tolerance studies must be conducted under conditions consistent with regulations prescribing good laboratory practices for conducting nonclincial laboratory studies (GLP) (21 CFR Part 58). Such studies should be completed and analysed prior to initiation of FIH clinical trials. When toxicology studies do not adequately characterize risk, additional safety testing should be conducted as appropriate.

- Data from toxicity studies may be submitted as unaudited final draft toxicicologic reports to accelerate proceeding to FIH clincial trials with COVID-19 vaccine candidates. The final, fully quality-assured reports should be available to FDA within 120 days of the start of the FIH clinical trial.

- Use of COVID-19 preventive vaccines in pregnancy and in women of childbearing potential will be an important consideration for vaccination programs. Therefore, FDA recommends that prior to enrolling pregnant women and women of childbearing potential who are not actively avoiding pregnancy in clinical trials, sponsors conduct developmental and reproductive toxicity (DART) studies with their respective COVID-19 vaccine candidate. Alternatively, sponsors may submit available data from DART studies with a similar product using comparable platform technology if, after consultation with the agency, the agency agrees those data are scientifically sufficient.

- Biodistribution studies in an animal species should be considered if the vaccine construct is novel in nature and there are no existing biodistribution data from the platform technology. These studies should be conducted if there is a likelihood of altered infectivity and tissue tropism or if a novel route of administration and formulation is to be used.

C. Characterization of the Immune Response in Animal Models

- Immunogenicity studies in animal models responsive to the selected COVID-19 vaccine antigen should be conducted to evaluate the immunologic properties of the COVID-19 vaccine candidate and to support FIH clinical trials. The aspects of

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1585

immunogenicity to be measured should be appropriate for the vaccine construct and its intended mechanism of action.

- Studies should include an evaluation of humoral, cellular, and functional immune responses, as appropriate to each of the included COVID-19 antigens. Use of antigen-specific enyzme linked immunosorbent assays (ELISA) should be considered to characterize the humoral response. Evaluation of cellular reponses should include the examination of CD8+ and CD4+ T cell responses using sensitive and specific assays. The functional activity of immune responses should be evaluated *in vitro* in neutralization assays using either wild-type virus or pseudovirion virus. The assays used for immunogencity evaluation should be demonstrated to be suitable for their intended purpose.

D. Studies to Address the Potential for Vaccine-associated Enhanced Respiratory Disease

- Current knowledge and understanding of the potential risk of COVID-19 vaccine associated ERD is limited, as is understanding of the value of available animal models in predicting the likelihood of such occurrence in humans. Nevertheless, studies in animal models (e.g., rodents and non-human primates) are considered important to address the potential for vaccine-associated ERD.

- Post-vaccination animal challenge studies and the characterization of the type of the nonclinical and clinical immune response induced by the particular COVID-19 vaccine candidate can be used to evaluate the likelihood of the vaccine to induce vaccine-associated ERD in humans.

- To support proceeding to FIH clinical trials, sponsors should conduct studies characterizing the vaccine-induced immune response in animal models evaluating immune markers of potential ERD outcomes. These should include assessments of functional immune responses (e.g., neutralizing antibody) versus total antibody responses and Th1/Th2 balance in animals vaccinated with clinically relevant doses of the COVID-19 vaccine candidate.

- COVID-19 vaccine candidates with immunogenicity data demonstrating high neutralizing antibody titers and Th1-type T cell polarization may be allowed to proceed to FIH trials without first completing postvaccination challenge studies in appropriate animal models, provided adequate risk mitigation strategies are put in place in the FIH trials. In these situations, postvaccination challenge studies are expected to be conducted in parallel with FIH trials to ensure the potential for vaccine-associated ERD is addressed prior to enrolling large numbers of human subjects into Phase 2 and 3 clinical trials. For COVID-19 vaccine candidates for which other data raise increased concerns about ERD, postvaccination animal challenge data and/or animal immunopathology studies are critical to assess protection and/or ERD *prior* to advancing to FIH clinical trials.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1586

- The totality of data for a specific COVID-19 vaccine candidate, including data from postvaccination challenge studies in small animal models and from FIH clinical trials characterizing the type of immune responses induced by the vaccine will be considered in determining whether Phase 3 studies can proceed in the absence of postvaccination challenge data to address risk of ERD.

V. CLINICAL TRIALS – KEY CONSIDERATIONS

A. General Considerations

- Understanding of SARS-CoV-2 immunology, and specifically vaccine immune responses that might predict protection against COVID-19, is currently limited and evolving. Thus, while evaluation of immunogenicity is an important component of COVID-19 vaccine development, at this time, the goal of development programs should be to pursue traditional approval via direct evidence of vaccine efficacy in protecting humans from SARS-CoV-2 infection and/or disease.

- Clinical development programs for COVID-19 vaccines might be expedited by adaptive and/or seamless clinical trial designs (described below) that allow for selection between vaccine candidates and dosing regimens and for more rapid progression through the usual phases of clinical development.

- Regardless of whether clinical development programs proceed in discrete phases with separate studies or via a more seamless approach, an adequate body of data, including data to inform the risk of vaccine-associated ERD, will be needed as clinical development progresses to support the safety of vaccinating the proposed study populations and number of participants and, for later stage development, to ensure that the study design is adequate to meet its objectives.

- FDA can provide early advice, and potentially concurrence in principle, on plans for expedited/seamless clinical development. However, sponsors should plan to submit summaries of data available at each development milestone for FDA review and concurrence prior to advancing to the next phase of development.

- Conducting clinical trials in the setting of a public health emergency presents operational challenges. FDA has issued guidance to provide general considerations to assist sponsors in assuring the safety of trial participants, maintaining compliance with good clinical practice (GCP), and minimizing risks to trial integrity for the duration of the COVID-19 public health emergency. It should be noted that not all of the recommendations in that guidance may be applicable to vaccine development, given some of the different considerations for these products (Ref. 15).

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1587

B. Trial Populations

- Once acceptable pre-clinical data are available, FIH and other early phase studies (which typically expose 10–100 participants to each vaccine candidate being evaluated) should first enroll healthy adult participants who are at low risk of severe COVID-19. Exclusion of participants at higher risk of severe COVID-19 from early phase studies is necessary to mitigate potential risk of vaccine-associated ERD until additional data to inform that potential risk becomes available through ongoing product development.

    - As the understanding of COVID-19 pathogenesis continues to evolve, exclusion criteria should reflect the current understanding of risk factors for more severe COVID-19, such as those described by the Centers for Disease Control and Prevention (Ref. 16).

    - Older adult participants (e.g., over 55 years of age) may be enrolled in FIH and other early phase studies so long as they do not have medical comorbidities associated with an increased risk of severe COVID-19. Some preliminary safety data in younger adults (e.g., 7 days after a single vaccination) should be available prior to enrolling older adult participants, especially for vaccine platforms without prior clinical experience.

    - If possible, early clinical studies should also exclude participants at high risk of SARS-CoV-2 exposure (e.g., healthcare workers).

- Sponsors should collect and evaluate at least preliminary clinical safety and immunogenicity data for each dose level and age group (e.g., younger versus older adults) to support progression of clinical development to include larger numbers (e.g., hundreds) of participants and participants at higher risk of severe COVID-19.

    - Preliminary immunogenicity data from early phase development should include assessments of neutralizing vs. total antibody responses and Th1 vs. Th2 polarization.

    - Additional data to further inform potential risk of vaccine-associated ERD and to support progression of clinical development, if available, may include preliminary evaluation of COVID-19 disease outcomes from earlier clinical development and results of non-clinical studies evaluating protection and/or histopathological markers of vaccine-associated ERD following SARS-CoV-2 challenge.

- To generate sufficient data to meet the BLA approval standard, late phase clinical trials to demonstrate vaccine efficacy with formal hypothesis testing will likely need to enroll many thousands of participants, including many with medical comorbidities for trials seeking to assess protection against severe COVID-19.

    - Initiation of late phase trials should be preceded by adequate characterization of safety and immunogenicity (e.g., in a few hundred participants for each

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1588

vaccine candidate, dose level, and age group to be evaluated) to support general safety, potential for vaccine efficacy, and low risk of vaccine-associated ERD.

- Results of non-clinical studies evaluating protection and/or histopathological markers of vaccine-associated ERD following SARS-CoV-2 challenge and COVID-19 disease outcomes from earlier clinical development are other potentially important sources of information to support clinical trials with thousands of participants.

- Although establishing vaccine safety and efficacy in SARS-CoV-2 naïve individuals is critical, vaccine safety and COVID-19 outcomes in individuals with prior SARS-CoV-2 infection, which might have been asymptomatic, is also important to examine because pre-vaccination screening for prior infection is unlikely to occur in practice with the deployment of licensed COVID-19 vaccines. Therefore, COVID-19 vaccine trials need not screen for or exclude participants with history or laboratory evidence of prior SARS-CoV-2 infection. However, individuals with acute COVID-19 (or other acute infectious illness) should be excluded from COVID-19 vaccine trials.

- FDA encourages the inclusion of diverse populations in all phases of vaccine clinical development. This inclusion helps to ensure that vaccines are safe and effective for everyone in the indicated populations.

  - FDA strongly encourages the enrollment of populations most affected by COVID-19, specifically racial and ethnic minorities.

  - Evaluation of vaccine safety and efficacy in late phase clinical development in adults should include adequate representation of elderly individuals and individuals with medical comorbidities.

  - FDA encourages vaccine developers to consider early in their development programs data that might support inclusion of pregnant women and women of childbearing potential who are not actively avoiding pregnancy in pre-licensure clinical trials (Ref. 17).

  - It is important for developers of COVID-19 vaccines to plan for pediatric assessments of safety and effectiveness, given the nature of the COVID-19 public health emergency, and to help ensure compliance with the Pediatric Research Equity Act (PREA) (section 505B of the FD&C Act (21 U.S.C. 355c)) (Ref. 18). The epidemiology and pathogenesis of COVID-19, and the safety and effectiveness of COVID-19 vaccines, may be different in children compared with adults. In order to ensure compliance with 21 CFR Part 50 Subpart D (Additional safeguards for children in clinical investigations), considerations on the prospect of direct benefit and acceptable risk to support initiation of pediatric studies, and the appropriate design and endpoints for pediatric studies, should be discussed in the context of specific vaccine development programs.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1589

C. Trial Design

- Early phase trials often aim to down-select among multiple vaccine candidates and/or dosing regimens via randomization of participants to different treatment groups. While including a placebo control and blinding are not required for early phase studies, doing so may assist in interpretation of preliminary safety data.

- Later phase trials, including efficacy trials, should be randomized, double-blinded, and placebo controlled.

    - An individually randomized controlled trial with 1:1 randomization between vaccine and placebo groups is usually the most efficient study design for demonstrating vaccine efficacy. Other types of randomization, such as cluster randomization, may be acceptable but require careful consideration of potential biases that are usually avoided with individual randomization.

    - An efficacy trial that evaluates multiple vaccine candidates against a single placebo group may be an acceptable approach to further increase efficiency, provided that the trial is adequately designed with appropriate statistical methods to evaluate efficacy.

    - If the availability of a COVID-19 vaccine proven to be safe and effective precludes ethical inclusion of a placebo control group, that vaccine could serve as the control treatment in a study designed to evaluate efficacy with non-inferiority hypothesis testing.

- Protocols for adaptive trials should include pre-specified criteria for adding or removing vaccine candidates or dosing regimens, and protocols for seamless trials should include pre-specified criteria (e.g., safety and immunogenicity data) for advancing from one phase of the study to the next.

- Follow-up of study participants for COVID-19 outcomes (in particular, for severe COVID-19 disease manifestations) should continue as long as feasible, ideally at least one to two years, to assess duration of protection and potential for vaccine-associated ERD as immune responses to the vaccine wane.

- Efficacy trials should include contingency plans for continued follow up and analysis of safety and effectiveness outcomes in the event that a safe and effective vaccine becomes available (e.g., as demonstrated in a planned interim analysis or as demonstrated in another clinical trial). In that case, discussion with the agency may be necessary to address ethical arguments to break the blind and offer vaccine to placebo recipients.

- In cases where statistical equivalency testing of vaccine immune responses in humans is required to support manufacturing consistency (clinical lot-to-lot consistency trial), this testing can be incorporated into the design of an efficacy trial and does not need to be conducted in a separate study.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1590

D. Efficacy Considerations

- Either laboratory-confirmed COVID-19 or laboratory-confirmed SARS-CoV-2 infection is an acceptable primary endpoint for a COVID-19 vaccine efficacy trial.

    - Acute cases of COVID-19 should be virologically confirmed (e.g., by RT-PCR).

    - SARS-CoV-2 infection, including asymptomatic infection, can be monitored for and confirmed either by virologic methods or by serologic methods evaluating antibodies to SARS-CoV-2 antigens not included in the vaccine.

- Standardization of efficacy endpoints across clinical trials may facilitate comparative evaluation of vaccines for deployment programs, provided that such comparisons are not confounded by differences in trial design or study populations. To this end, FDA recommends that either the primary endpoint or a secondary endpoint (with or without formal hypothesis testing) be defined as virologically confirmed SARS-CoV-2 infection with one or more of the following symptoms:

    - Fever or chills
    - Cough
    - Shortness of breath or difficulty breathing
    - Fatigue
    - Muscle or body aches
    - Headache
    - New loss of taste or smell
    - Sore throat
    - Congestion or runny nose
    - Nausea or vomiting
    - Diarrhea

- As it is possible that a COVID-19 vaccine might be much more effective in preventing severe versus mild COVID-19, sponsors should consider powering efficacy trials for formal hypothesis testing on a severe COVID-19 endpoint. Regardless, severe COVID-19 should be evaluated as a secondary endpoint (with or without formal hypothesis testing) if not evaluated as a primary endpoint. FDA recommends that severe COVID-19 be defined as virologically confirmed SARS-CoV-2 infection with any of the following:

    - Clinical signs at rest indicative of severe systemic illness (respiratory rate ≥ 30 per minute, heart rate ≥ 125 per minute, $SpO2 \leq 93\%$ on room air at sea level or $PaO2/FiO2 < 300$ mm Hg)
    - Respiratory failure (defined as needing high-flow oxygen, noninvasive ventilation, mechanical ventilation or ECMO)
    - Evidence of shock (SBP < 90 mm Hg, DBP < 60 mm Hg, or requiring vasopressors)
    - Significant acute renal, hepatic, or neurologic dysfunction

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1591

- Admission to an ICU
- Death

- SARS-CoV-2 infection (whether or not symptomatic) should be evaluated as a secondary or exploratory endpoint, if not evaluated as a primary endpoint.

- The above diagnostic criteria may need to be modified in certain populations; for example, in pediatric patients and those with respiratory comorbidities. Sponsors should discuss their proposed case definitions with the Agency prior to initiating enrollment.

E. Statistical Considerations

- To ensure that a widely deployed COVID-19 vaccine is effective, the primary efficacy endpoint point estimate for a placebo-controlled efficacy trial should be at least 50%, and the statistical success criterion should be that the lower bound of the appropriately alpha-adjusted confidence interval around the primary efficacy endpoint point estimate is >30%.

  - The same statistical success criterion should be used for any interim analysis designed for early detection of efficacy.

  - A lower bound ≤30% but >0% may be acceptable as a statistical success criterion for a secondary efficacy endpoint, provided that secondary endpoint hypothesis testing is dependent on success on the primary endpoint.

- For non-inferiority comparison to a COVID-19 vaccine already proven to be effective, the statistical success criterion should be that the lower bound of the appropriately alpha-adjusted confidence interval around the primary relative efficacy point estimate is >-10%.

- For each vaccine candidate, appropriate statistical methods should be used to control type 1 error for hypothesis testing on multiple endpoints and/or interim efficacy analyses.

- Late phase studies should include interim analyses to assess risk of vaccine-associated ERD (see section F) and futility.

- Study sample sizes and timing of interim analyses should be based on the statistical success criteria for primary and secondary (if applicable) efficacy analyses and realistic, data-driven estimates of vaccine efficacy and incidence of COVID-19 (or SARS-CoV-2 infection) for the populations and locales in which the trial will be conducted.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1592

F. Safety Considerations

- The general safety evaluation of COVID-19 vaccines, including the size of the safety database to support vaccine licensure, should be no different than for other preventive vaccines for infectious diseases. Safety assessments throughout clinical development should include:

  - Solicited local and systemic adverse events for at least 7 days after each study vaccination in an adequate number of study participants to characterize reactogenicity (including at least a subset of participants in late phase efficacy trials).

  - Unsolicited adverse events in all study participants for at least 21–28 days after each study vaccination.

  - Serious and other medically attended adverse events in all study participants for at least 6 months after completion of all study vaccinations. Longer safety monitoring may be warranted for certain vaccine platforms (e.g., those that include novel adjuvants).

  - All pregnancies in study participants for which the date of conception is prior to vaccination or within 30 days after vaccination should be followed for pregnancy outcomes, including pregnancy loss, stillbirth, and congenital anomalies.

- The pre-licensure safety database for preventive vaccines for infectious diseases typically consists of at least 3,000 study participants vaccinated with the dosing regimen intended for licensure. FDA anticipates that adequately powered efficacy trials for COVID-19 vaccines will be of sufficient size to provide an acceptable safety database for each of younger adult and elderly populations, provided that no significant safety concerns arise during clinical development that would warrant further pre-licensure evaluation.

- COVID-19 vaccine trials should periodically monitor for unfavorable imbalances between vaccine and control groups in COVID-19 disease outcomes, in particular for cases of severe COVID-19 that may be a signal for vaccine-associated ERD.

  - Studies should include pre-specified criteria for halting based on signals of potential vaccine-associated ERD.

  - FDA recommends use of an independent data safety monitoring board (DSMB) (Ref. 18) for vaccine-associated ERD and other safety signal monitoring, especially during later stage development.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1593

VI. POST-LICENSURE SAFETY EVALUATION – KEY CONSIDERATIONS

A. General Considerations

- As with all licensed vaccines, there can be limitations in the safety database accrued from the pre-licensure clinical studies of a COVID-19 vaccine. For example:
    - The number of subjects receiving a COVID-19 vaccine in pre-licensure clinical studies may not be adequate to detect some adverse reactions that may occur infrequently.
    - Pre-licensure safety data in some subpopulations likely to receive a COVID-19 vaccine (e.g., pregnant individuals, or individuals with medical comorbidities) may be limited at the time of licensure.
    - For some COVID-19 vaccines, the safety follow-up period to monitor for possible vaccine-associated ERD and other adverse reactions may not have been completed for all subjects enrolled in pre-licensure clinical studies before the vaccine is licensed.

- For COVID-19 vaccines, it is likely that during the early postmarketing period, a large population might be vaccinated in a relatively short timeframe. Thus, FDA recommends early planning of pharmacovigilance activities before licensure.

- To facilitate accurate recording and identification of vaccines in health records, manufacturers should consider establishment of individual Current Procedural Terminology (CPT) codes and the use of bar codes to label the immediate container.

B. Pharmacovigilance Activities for COVID-19 Vaccines

- Routine pharmacovigilance for licensed biological products includes expedited reporting of serious and unexpected adverse events as well as periodic safety reports in accordance with 21 CFR 600.80 (Postmarketing reporting of adverse experiences).

- FDA recommends that at the time of a BLA submission for a COVID-19 vaccine, applicants submit a Pharmacovigilance Plan (PVP) as described in the FDA Guidance for Industry; E2E Pharmacovigilance Planning (Ref. 20). The contents of a PVP for a COVID-19 vaccine will depend on its safety profile and will be based on data, which includes the pre-licensure clinical safety database, preclinical data, and available safety information for related vaccines, among other considerations.

- The PVP should include actions designed to address all important identified risks, important potential risks or important missing information. Pharmacoepidemiologic studies or other actions to evaluate notable potential risks, such as vaccine-associated ERD, should be considered. FDA may recommend one or more of the following as components of a PVP for a COVID-19 vaccine:

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1594

- Submission of reports of specific adverse events of interest in an expedited manner beyond routine required reporting;
- Submission of adverse event report summaries at more frequent intervals than specified for routine required reporting;
- Ongoing and/or extended safety follow-up (under an IND) for vaccine-associated ERD of subjects enrolled in pre-licensure clinical studies;
- A pharmacoepidemiologic study to further evaluate (an) important identified or potential risk(s) from the clinical development program, such as vaccine-associated ERD or other uncommon or delayed-onset adverse events of special interest;
- A pregnancy exposure registry that actively collects information on vaccination during pregnancy and associated pregnancy and infant outcomes (Ref. 21).

C. Required Postmarketing Safety Studies

- Section 505(o)(3) of the FD&C Act (21 U.S.C. 355(o)(3)) authorizes FDA to require certain postmarketing studies or clinical trials for prescription drugs approved under section 505(b) of the FD&C Act (21 U.S.C. 355(b)) and biological products approved under section 351 of the PHS Act (42 U.S.C. 262) (Ref. 22). Under section 505(o)(3), FDA can require such studies or trials at the time of approval to assess a known serious risk related to the use of the drug, to assess signals of serious risk related to the use of the drug, or to identify an unexpected serious risk when available data indicate the potential for a serious risk. Under section 505(o)(3), FDA can also require such studies or trials after approval if FDA becomes aware of new safety information, which is defined at section 505-1(b)(3) of the FD&C Act (21 U.S.C. 355-1(b)(3)).

- For COVID-19 vaccines, FDA may require postmarketing studies or trials to assess known or potential serious risks when such studies or trials are warranted.

VII. DIAGNOSTIC AND SEROLOGICAL ASSAYS – KEY CONSIDERATIONS

- Diagnostic assays used to support the pivotal efficacy analysis (e.g., RT-PCR) should be sensitive and accurate for the purpose of confirming infection and should be validated before use.

- Assays used for immunogenicity evaluation should be suitable for their intended purpose of assessing relevant immune responses to vaccination and be validated before use in pivotal clinical trials.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1595

VIII. ADDITIONAL CONSIDERATIONS

A. Additional Considerations in Demonstrating Vaccine Effectiveness

- Given the current state of knowledge about COVID-19, the most direct approach to demonstrate effectiveness for a COVID-19 vaccine candidate is based on clinical endpoint efficacy trials showing protection against disease (see section V. D. above).

- Once additional understanding of SARS-CoV-2 immunology, and specifically vaccine immune responses that might be reasonably likely to predict protection against COVID-19, is acquired, accelerated approval of a COVID-19 vaccine pursuant to section 506 of the FD&C Act (21 U.S.C. 356) and 21 CFR 601.40 may be considered if an applicant provides sufficient data and information to meet the applicable legal requirements. For a COVID-19 vaccine, it may be possible to approve a product under these provisions based on adequate and well-controlled clinical trials establishing an effect of the product on a surrogate endpoint (e.g., immune response) that is reasonably likely to predict clinical benefit.

- A potential surrogate endpoint likely would depend on the characteristics of the vaccine, such as antigen structure, mode of delivery, and antigen processing and presentation in the individual vaccinated. For example, an immune marker established for an adenovirus-based vaccine cannot be presumed applicable to a VSV-based vaccine, given that the two vaccines present antigen in different ways and engender different types of protective immune responses.

- Since SARS-CoV-2 represents a novel pathogen, a surrogate endpoint reasonably likely to predict protection from COVID-19 should ideally be derived from human efficacy studies examining clinical disease endpoints. If the surrogate endpoint is derived from other data sources, sponsors should consult the FDA to reach agreement on the use of the surrogate endpoint.

- An adequate dataset evaluating the safety of the vaccine in humans would need to be provided for consideration of licensure.

- For drugs granted accelerated approval, postmarketing confirmatory trials have been required to verify and describe the predicted effect on clinical benefit. These studies should usually be underway at the time of the accelerated approval, 21 CFR Part 601, Subpart E, and must be completed with due diligence (section 506(c)(3)(A) of the FD&C Act (21 U.S.C. 356(c)(3)(A)) and 21 CFR 601.41).

- If it is no longer possible to demonstrate vaccine effectiveness by way of conducting clinical disease endpoint efficacy studies, the use of a controlled human infection model to obtain evidence to support vaccine efficacy may be considered. However, many issues, including logistical, human subject protection, ethical, and scientific issues, would need to be satisfactorily addressed. At this

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1596

time no controlled human infection models for SARS-CoV-2 have been established or characterized.

B. Emergency Use Authorization

- An Emergency Use Authorization (EUA) may be issued only after several statutory requirements are met (section 564 of the FD&C Act (21 U.S.C. 360bbb-2)) (Ref. 23). Among these requirements is a determination by FDA that the known and potential benefits of a product, when used to diagnose, prevent, or treat serious or life-threatening diseases, outweigh the known and potential risks of the product.

- Issuance of an EUA (Ref. 23) may be appropriate for a COVID-19 vaccine provided the standard for issuing an EUA is met. Issuance of an EUA for a COVID-19 vaccine prior to the completion of large randomized clinical efficacy trials could reduce the ability to demonstrate effectiveness of the investigational vaccine in a clinical disease endpoint efficacy trial to support licensure, and such clinical disease endpoint efficacy trials may be needed to investigate the potential for vaccine-associated ERD. Thus, for a vaccine for which there is adequate manufacturing information, issuance of an EUA may be appropriate once studies have demonstrated the safety and effectiveness of the vaccine but before the manufacturer has submitted and/or FDA has completed its formal review of the biologics license application.

- In the case of investigational vaccines being developed for the prevention of COVID-19, any assessment regarding an EUA would be made on a case by case basis considering the target population, the characteristics of the product, the preclinical and human clinical study data on the product, and the totality of the available scientific evidence relevant to the product.

INSTRUCTIONS ON HOW TO USE THIS CRF

1. Use black ink

All entries must be legible and with a black ballpoint pen.

2. Notes

Only the Investigator and site personnel named in the delegation log may complete CRFs. The Investigator should ensure that he/she signs and dates all completed CRFs to indicate that he/she believes that they are complete and correct.

Check that the data reported on the CRFs, derived from Source Document, is consistent.

If you cannot complete part of the form, write down "Unknown" [UK], "Uncertain" [UC], and "Test Not Done" [TND]. Avoid using the phrase 'Not Applicable' [NA].

Dates should be mentioned as dd/mmm/yyyy and time in 24-hour clock as hh/mm (for e.g. 1.03 pm as 13:03 hrs).

For reasons of confidentiality, the subject's full name should never appear on the CRFs, however the investigator should keep a record of all subjects in the study that identifies the subject's full name and their code number. Enter the subject's initials in the order of 'surname', 'first initial', and 'second initial'. In case of only two initials mark the third box as '__'

Each subject will be assigned a 3-digit screening number in an ascending order. For e.g. first subject screening No. 001, second one will be 002, etc.

The Investigator should comment on and document any significance noted on the CRFs for any laboratory values outside the laboratory's reference range, or some other range agreed with the sponsor to avoid the generation of data queries.

3. Make no erasures

When corrections to entries in the CRF need to be done, the erroneous information must be crossed out with a single line so that the incorrect entry is still readable, the new entry made, and the changes initialed and dated. Do not scribble. On no account, should erasures and correction fluid be used.

Mensagem Parte 06 (0021610012) SEI 25000.100536/2021-98 / pg. 1601

4. Resolve or explain all inconsistencies noted in the record

Ensure all data entries in the CRF are clearly written in order to avoid generation of data queries. A note of explanation must be included before dismissing as inaccurate any clinically relevant information noted in the chart or log.

5. Note any omissions

Omitted data should be entered in the next available space with an explanation of the lateness of the entry.

6. Leave no blank spaces

All blank spaces or section of the CRF should have a line drawn through them once the date passes.

7. Sign documents cautiously

No research document should be signed / initialed unless it accurately reflects the clinical situation described. A blank CRF must never be signed. The date of the signature should reflect the date on which the record was reviewed. The signatures and the initials should be the same as that provided in the Site Personnel Signature Log.

8. Additional pages

Add additional pages (e.g. comments page, concomitant medication page etc) wherever applicable and number them as – Page XXa of XX. For e.g. Page 1a of 1

Fernanda, bom dia.

Em complemento as repostas enviadas ontem, compartilho os dados utilizados para apreciação, sendo:

1. **Collatect_PD_BBV152** – Referente aos desvios de protocolos de menor impacto, com sua descrição e ação corretiva/preventiva.
2. **Subjects_Visits_BBV152_STATUS2_Interim_report** – Fornecida pela equipe responsável pelo IWRS, onde é possível ver os 24.432 participantes que haviam recebido a primeira e segunda dose além de outras informações como screening number, gênero, idade, data de cada uma das visitas e status do participante. (*Enrolled, discontinued, unblided*...)
3. **DAY 42 Positive Cases_FEndpoint** – Informações disponibilizadas pelo IQVIA com os 127 casos de Covid19 Sintomáticos utilizados para o desfecho primário do estudo. No documento é fornecido as seguintes informações:

    - as datas da primeira e segunda dose,
    - data do follow-up de 42 dias,
    - os sintomas informados pelo participante,
    - a data do PCR positivo,
    - Quantos dias após primeira e segunda dose,
    - Informações clínicas como SpO2, exames de imagem e outros quando aplicável,
    - Terapia medicamentosa para tratamento do Covid19, e
    - Observação se o mesmo se enquadra no critério de Covid19 grave conforme Guideline do FDA.

Envio novamente o segundo relatório interino de fase 3 o qual essas informações se referem, para facilitar e permanecemos a disposição,

Assunto: Re: Documentação prévia à submissão - Covaxin

Fernanda, boa tarde. Como vai ?

Como estamos tratando mais de um assunto ao mesmo tempo, as informações estão ficando um pouco sobrepostas. Abaixo separei por itens em atual tratativa junto a agência:

- Os documentos que foram enviados nessa pasta do OneDrive são referentes ao processo 25351455725202115 e Expediente Nº 1809912212 realizado no dia 11/05/21 com assunto 11800, para que a ANVISA possa analisar o documento de uma maneira formal. Esse protocolo foi feito

para que após a análise de vocês, em a documentação estando de acordo, a Precisa possa dar continuidade no processo de pedido de importação excepcional através do Ministério da Saúde.

- Quanto ao DDCM, pedimos uma reunião junto a CONEP e gostaria de contar com a sua participação, bem como da Brenda e do Francis, para tratarmos das questões apresentadas no termo de compromisso. Hoje estaremos aditando o DDCM para inserir os detalhes das SAEs dos ensaios clínicos, a relação causal, inclusive dos óbitos conforme solicitado.

- E também, para manter todos na mesma página, teremos uma reunião amanhã com a GGFIS onde a BBIL irá apresentar todas as ações atendidas do CAPA para seguirmos com o Peticionamento do CBPF.

Apesar de ter resumido acima cada uma das atividades, iremos nos organizar sempre em e-mails separados para cada um, para uma melhor comunicação.

Permanecemos a disposição,

Bom dia, Amanda

Vc se refere à documentação do DDCM ou da submissão prévia à importação? Os links eram os mesmos? Só para estarmos na mesma página, o que queríamos era que a empresa informasse qual documento

enviado na submissão prévia à importação seria diferente ou com novas informações em comparação com o que foi encaminhado no DDCM.
Foi isso que a empresa disponibilizou?

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Summary information on the final lots

Name and Address of Manufacturer	Bharat Biotech International Limited, Genome Valley, Shameerpet (M), Medchal District - 500 078, Telangana, India.
Generic Name	Whole Virion, Inactivated Corona Virus Vaccine
Manufacturing License No	03/HD/AP/98/V/R
Licensed Brand Name	Whole Virion, Inactivated Corona Virus Vaccine
Strain of the virus seed	SARS-CoV-2 Virus strains
Name of the substrate used for production	Vero Cells
Nature of the Finished Product	Adjuvanted Vaccine
Batch No.	37F21046A
Date of Manufacture	04/21
Date of Expiry	09/21
No. of Filled Units for Release	41130
Recommended Storage Temperature	2°C to 8°C
Adjuvant used	ALGEL IMDG
Preservative used	2 Phenoxyethanol
Volume of the vaccine in each	5.0 mL in 5.0 mL Vial
Potency of the Vaccine	7.2 µg/SHD
Dose Size	0.5 mL
No. of Doses per Unit	10 doses
Shelf-life approved(months)	6 Months
Specimen copy of the Label	

Signature/Date: Vijaya 10/05/2021

Name: N. VIJAYA LAKSHMI

Department: Quality Assurance

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Cell Seed (MCB)	
Name and identification of cell strain	Vero MCB P/N : BHAMC 1 . FP, L/N:3006-104986
History of origin of cell strain	ATCC USA, Vero ATCC CCL -81 Lot F-11497.
Source of cell strain	Prepared and characterized at BioReliance
Date of procurement	25-03-04 procured from BioReliance Rockville, MD,USA
No.of bottle/ vials procured	25x1 mL
Passage level of cells	P # 133
Storage conditions	Liquid Nitrogen gaseous phase
Authority that approved cell seed	National Regulatory Authority, India IP
Manufacturer's Working Cell Bank (MWCB)	
Lot number	60120001A
Date approved	Permission obtained under post approval change on 05/04/2019 by DCG(I) vide letter No.6F.N-12-78/BBIL-PAC-vero Bank/17-BD
Date MWCB was established	31/03/2020
Total number of CryoUnits stored	750
Passage level of MWCB	P#138
Maximum passage approved for MWCB	P#159
Storage conditions	In vapour phase of Liquid Nitrogen

Identity test:

Specification	Should show 222 bp band after PCR amplification in Gel Analysis for AGMK species
Method	PCR method
Date of Test	15/05/2020
Date of completion	16/05/2020
Result	222 bp band observed

Adventitious agents
Method :In vivo method
Test in suckling mice:

Specification	Should be free from Adventitious agents.
Number of animals tested	30
Wt. range	Less than 0- 24 hrs old
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.1mL through I/P and 0.01mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Test in adult mice:	
Number of animals tested	20
Wt. range	15-20 gms.
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.5mL through I/P and 0.03mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Results	Free from Adventitious agents
Test in guinea pigs:	
Number of animals tested	10
Wt. range	350 - 500 gms
Route of inoculation	IP/IC
Quantity injected	1 x 10^7 cells /route 5.0mL through I/P and 0.1mL through I/C
Date of inoculation	19/05/2020
Date of completion	30/06/2020
Observation period	42 days
Results	Free from Adventitious agents
Test in rabbits:	
Number of animals tested	10
Wt. range	1.5 – 2.5 kgs
Route of inoculation	I/D, S/C
Quantity injected	1 x 10^7 cells /route 1.0 mL through I/D and 5.0mL through S/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents
Test in embryonated eggs:	
Method	In-vivo method (Embryonated chicken eggs (5-7 days & 9-11 days old)
Date of test	02/07/2020
Date of completion	16/07/2020
Qty. Inoculated	1 x10^6 cells /route 1.0mL through allantoic cavity and 1.0mL through Yolk sac)
No. of eggs	20
Observation period	14 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Identity test:
Adventitious agents:
In-vitro method:

Method	3 Indicator Cell lines (Vero cells, MRC-5 & Hep 2C cells)
Specification	Free from Adventitious agent
Qty. inoculated	1 x 10^7 cells in 10 mL/cell line
Date of test	22/05/2020
Date of completion	05/06/2020
Observation period	14 days
Result	Free from Adventitious agents

Mycoplasma Test

Method	PCR method
Specification	Should be Negative for Mycoplasma species
Date of test	15/07/2020
Date of Completion	16/07/2020
Observation period	1 day
Result	Negative for Mycoplasma species

Sterility test

Method	Direct Inoculation
Specification	No Growth should be observed
Date of test	15/04/2020
Date of completion	29/04/2020
Observation period	14 days
Result	No Growth observed (sterile)

Haemadsorption test

Method	Guinea Pig RBCs method
Specification	Should be free from Heamadsorbing viruses.
Date of test	04/05/2020
Date of completion	04/05/2020
Observation period	1 day
Result	Free from Heamadsorbing viruses

Growth Characteristics

Method	Subculture method.
Specification	Cells should be healthy and growing
Date of test	24/04/2020
Date of completion	28/04/2020
Observation period	4 days
Result	Cells are healthy and growing

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Homogeneity Test

Method	Dye exclusion cell counting
Specification	90% to 110% recovery should be observed from initial cell count in each cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	102 %

Cell viability

Method	Dye exclusion method of cell counting
Specification	NLT 80%
Date of test	24/04/2020
Date of completion	24/04/2020
Result	99 %

Viable Cell Count

Method	Dye exclusion method of cell counting
Specification	NLT 5×10^6 Cells/Cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	5.2 $\times10^6$ Cells/Cryovial

Cell culture medium

Serum used in cell culture medium for WVS

Animal origin of serum	Fetal Bovine Serum
Vendor	Bovogen Biological Pvt. Ltd.
Catalog Number	SFBS-GI
Batch number	1710A
Expiration Date	Oct 2022

Trypsin used for preparation of cell cultures

Vendor	: Life Technologies
Catalog Number	:27250
Batch number	:2019024
Expiration Date	:Mar 2021

Control of source material

Animal serum used in SARS-CoV-2 Vaccine production

Type	NBCS – Gamma irradiated
Make / Origin	Bovogen/ Australia and New Zealand
Batch No./A.R.No:	RM-04-20-008

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Name and History of Seed Strain	SARS-CoV-2 Virus seed
Origin of strain	ICMR-National Institute of Virology, Pune, India
Reference No.	SARS-CoV-2 Virus (NIV 2020-770)
Date of procurement	30/04/2020
Titre	$10^{6.5}$ $CCID_{50}$/mL
Passage Level	P#3

Master Seed Lot: (MVB)

Date of preparation of Master Seed Lot	12/05/2020
Titre of Master Seed	$10^{6.25}$ $CCID_{50}$/mL
Batch No.	37020001A
Quantity prepared	400 x 1 mL
Storage	-70 ± 5°C
Passage Level	P#5

Working Seed Lot

Date of preparation	17/05/2020
Quantity prepared	Each 26 mL x 790 PP bottle
Batch No.	37120001A
Passage level	P#6
No. of passage between Master Seed and Working Seed Lot	One
Storage	-70 ± 5°C

Tests on Master Seed Lot:

Identity test

By In-vitro method:

Method	qPCR Method
Specification	Virus titration by qPCR serve as an identity test
Date of test	13/05/2020
Date of completion	13/05/2020
Results	Complies

Sterility

Method	Direct inoculation
Specification	No growth should be observed
Date of test	19/05/2020
Date of Completion	02/06/2020
Observation period	14 days
Result	No growth observed

Mycoplasma

Method	PCR Method
Specification	Should be Negative for Mycoplasma species
Date of test	18/05/2020
Date of completion	19/05/2020
Results	Negative for Mycoplasma species

Virus titration (In-vitro)

Method	In-vitro by CPE method
Specification	NLT $10^{6.00}$ $CCID_{50}$ per mL
Date of test	12/05/2020
Date of completion	19/05/2020
Results	$10^{6.25}$ $CCID_{50}$ per mL

Virus titration by qPCR

Method	qPCR Method
Specification	NLT $10^{6.00}$ Copies per mL
Date of test	13/05/2020
Date of completion	13/05/2020
Results	$10^{7.25}$ Copies per mL

Adventitious agents (In-vitro)

Method	(3 indicator cell line method) In-vitro
Specification	Should be free from Adventitious agents
Date of test	17/06/2020
Date of completion	01/07/2020
Results	Free from Adventitious agents

Heamadsorption

Method	Guinea pigs RBC method
Specification	Should be free from Haemadsorbing viruses
Date of test	01/07/2020
Date of completion	01/07/2020
Results	Free from Haemadsorbing viruses

Virus identity by NGS method

Method	NGS method
Specification	95% sequence should match with published sequence
Date of test	18/06/2020
Date of completion	29/06/2020
Results	100 % sequence matches with published sequence

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Preparation and control of batch

Working Virus strain used for production	: SARS-CoV-2 and bottle No. 141
Virus strain and inoculum seed used for production	: SARS-CoV-2 and bottle No. 02,59,67,75
Substrate used	: Vero Cells
Bioprocess Batch Number	: 37621025A
Type of culture	: Monolayer
Cell culture vessel used	: Bioreactor 2 X 50L (FBR-001 and FBR-002)
Total No. of cell stacks used for control	: 12xCS10
Date of infection	: 04/04/2021
Virus Titre ($CCID_{50}$/mL)	: $10^{6.88}CCID_{50}$/mL
Working Seed Titre (RT PCR)	: $10^{7.44}$ copies/mL
Total Cell count (FBR-001)	: 228000 x 10^6 cells
Total Cell count (FBR-002)	: 220000 x 10^6 cells
Volume of Virus Inoculum (FBR-001)	: 1502 mL
Volume of Virus Inoculum (FBR-002)	: 1450 mL
Multiplicity of Infection	: 0.05

Single virus harvests and purified bulk material :

No. of Harvests: 1

Viral Harvest	**VH I**
Date of harvesting	07/04/2021
Volume(L)	598.0 L

Test on Virus Harvest

Virus Titration (In-vitro)by CPE Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ $CCID_{50}$/mL
Date of test	23/04/2021
Date of completion	30/04/2021
Results	$10^{7.00}$ $CCID_{50}$/mL

Virus Titration by qPCR Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ copies/mL
Date of test	07/05/2021
Date of completion	07/05/2021
Results	$10^{7.29}$copies/mL

Sterility test for bacteria and fungi

Viral Harvest	**VH I**
Specification	No growth should be observed (Sterile)
Date of test	08/04/2021
Date of completion	22/04/2021
Results	:No growth observed (Sterile)

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Inactivation of Whole Virion Corona Virus Harvest

Inactivating agent used	BPL
Concentration	1:2500
Temperature	8±5°C
Incubation period	32 hrs

S.No	Batch Number	Date of inactivation	Date of completion
1	37621025A	07/04/2021	09/04/2021

Purification

Batch Number: 37621025A	Date of Concentration & Purification	Total volume used for purification
VH I	09/04/2021	664.0 L

Buffer exchange and Sterile Filtration of Inactivated SARS-CoV-2 Virus Bulk

Pool Batch No.	37621025A
No. of Inactivated bulk used for pooling	01 (VH I)
Date of pooling	07/04/2021
Specification of the Purified Inactivated Bulk	NLT 20 L
Final volume of the Purified Inactivated Bulk	39.40 L
Storage condition and shelf life	-70±5°C and To be established
Identification	
Specification	ELISA test and SDS PAGE serve as an identity test
Method	ELISA
Date of test	14/04/2021 and 16/04/2021
Date of completion	15/04/2021 and 16/04/2021
Result	Complies
Description	
Specification	Clear colourless, translucent liquid, free from particulate matter
Method	Visual Examination
Result	Clear colourless, translucent liquid, free from particulate matter
pH	
Method	Potentiometry
Specification	7.00-8.00
Date of test	12/04/2021
Result	7.54

Sterility Test

Method	Membrane filtration
Specification	No growth should be observed (Sterile)
Date of test	12/04/2021
Date of completion	26/04/2021
Result	No growth observed

Total Protein content

Specification	NLT 15.00 µg/mL
Method	Lowry et al.
Date of test	12/04/2021
Result	154.83 µg/mL

Corona Virus Inactivation Test

Specification	No CPE should be observed
Date of test	22/04/2021
Date of completion	29/04/2021
Result	No CPE observed

Corona Virus Amplification Test

Specification	No residual live virus should be observed in Corona virus Amplification test
Date of inoculation into cell culture	12/04/2021
Cell strain inoculated	Vero cell
Date of 10th day Harvest collection	21/04/2021
Date of 15th day Harvest collection	26/04/2021
Result	No residual live virus observed

Residual cellular DNA content

Specification	NMT 10.00 ng/SHD
Method	By Qubit Flurometry
Date of test	19/04/2021
Result	0.04 ng/SHD

Residual Bovine Serum Albumin content

Specification	NMT 50.00 ng/SHD
Method	By ELISA
Date of test	16/04/2021
Result	5.27 ng/SHD

Antigenic Purity by SDS-PAGE

Specification	Should show only Corona virus specific bands
Method	SDS-PAGE
Date of Test	16/04/2021
Result	Complies

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Preparation and Control of Final Bulk

Final Bulk No.	37F21046A
Date of preparation	22/04/2021

Composition of Final Bulk

Purified Bulk B.No and volume	37621025- 22.61 L
ALGEL-IMDG	11.795 L
Phosphate buffer saline + 2 PE	215.595 L
Total volume	250 L
Storage temperature	2-8 ^{0}C

Test performed on Final Bulk

Description

Specification	White to off white opalescent suspenion, free from extraneous particles
Method	Visual Examination
Date of test	22/04/2021
Result	White opalescent suspension, free from extraneous particles

Identification:

Specification	Should comply with identification test performed on finished product
Method	ELISA
Date of test	28/04/2021
Date of completion	29/04/2021
Result	Complies

pH

Method	Potentiometry
Specification	7.00 -8.00
Date of Test	22/04/2021
Result	7.37

Aluminium content

Method	Titration
Specification	NLT 0.38 mg/ mL and NMT 0.58 mg/mL
Date of Test	22/04/2021
Result	0.47 mg/mL

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Protein adsorption (Lowry et.al) Test

Method	Lowry et.al
Specification	NLT 75.00 % of the stated label claim of protein
Date of Test	06/05/2021
Result	100%

Bacterial Endotoxins test

Method	Gel clot method
Specification	Less than 25 International units (IU) per Single Human Dose
Date of test	22/04/2021
Results	< 12.5 IU/SHD

2-Phenoxy ethanol content

Method	HPLC
Specification	NLT 85.0% and NMT 115.0% of the stated label claim
Date of Test	22/04/2021
Date of Completion	22/04/2021
Result	99.8%

Sterility

Method	Direct inoculation
Specification	No growth should be observed (Sterile)
Date of Test	23/04/2021
Date of Completion	07/05/2021
Result	No growth observed

CERTIFICATE OF PRODUCTION

This is to certify that Final Bulk No.: 37F21046A of Whole Virion, Inactivated Corona Virus Vaccine with 2-Phenoxyethanol has been manufactured as per standard operating procedures to satisfy the requirements for Whole Virion, Inactivated Corona Virus Vaccine as current In House Specification.

Date of transfer of Final Bulk for filling	23/04/2021
Number of containers transferred	5 X 50 L Pressure vessels
Volume of bulk transferred	249.874L

FILLING

Product name	Whole Virion, Inactivated Corona Virus Vaccine
Date of Filling	23/04/2021
Final Batch No	37F21046A
Filling Time	21:15 hrs (23/04/2021) to 09:19 hrs (24/04/2021)
Total No. of Units Filled	41624
Volume in Each Container	6.0 mL
No. of doses per Vial	10 doses
Rejections During Filling and Sealing	39
No. of vials for Filling In process check	88
No. of Units used for Leak test	32
Percentage rejection	0.09%
No. of Units transferred to Inspection	41465

Subject- Permission to manufacture of Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in Form CT-23 as per the provisions of New Drugs and Clinical Trials Rules, 2019 under Drugs & Cosmetics Act, 1940 - regarding.

Reference:

1. Permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002dated 03.01.2021.
2. Your letter nos. BBIL/RA/21/173, 177, 187 dated 06.03.2021, 08.03.2021 & 10.03.2021 submitted to this office vide email dated 06.03.2021, 08.03.2021 & 10.03.2021.

Sir,

This is with reference to the permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002 dated 03.01.2021 to manufacture Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode with various conditions.

In this regard, the interim safety and efficacy data of phase III clinical trial of Whole Virion, Inactivated Corona Virus Vaccine (BBV152) in the country submitted to this office was reviewed in consultation with SEC (COVID-19) committee on 08.03.2021 & 10.03.2021 respectively, wherein after detailed deliberation the committee recommended for omission of the condition of the use of the vaccine in clinical trial mode. However, the vaccine should be continued to be used under restricted use in emergency situation condition. Further, the ongoing phase III clinical trial should be continued as per the approved protocol. The firm should update the prescribing information and factsheet accordingly (under restricted use in emergency situation condition). All other conditions of the marketing authorisation shall continue to remain the same.

Accordingly, based on the recommendations of SEC, the condition "*This permission is for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode*" as mentioned in the said permission is amended to read as "*This permission is for restricted use in emergency situation in public interest*". However, you are required to continue ongoing Phase III clinical trial as per approved clinical trial protocol & submit revised summary of product characteristics (SmPC), Prescribing Information (PI) and Factsheet.

Yours faithfully,

(Dr. V. G. Somani)
Drugs Controller General (India)

Anexos: 37F21046A SLP.pdf; ANEXO_2_India EUL 12032021.pdf; PROFORMA INVOICE - BRAZIL_COVAXIN.pdf

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Emanuela Medrades

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**

- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Summary information on the final lots

Name and Address of Manufacturer	Bharat Biotech International Limited, Genome Valley, Shameerpet (M), Medchal District - 500 078, Telangana, India.
Generic Name	Whole Virion, Inactivated Corona Virus Vaccine
Manufacturing License No	03/HD/AP/98/V/R
Licensed Brand Name	Whole Virion, Inactivated Corona Virus Vaccine
Strain of the virus seed	SARS-CoV-2 Virus strains
Name of the substrate used for production	Vero Cells
Nature of the Finished Product	Adjuvanted Vaccine
Batch No.	37F21046A
Date of Manufacture	04/21
Date of Expiry	09/21
No. of Filled Units for Release	41130
Recommended Storage Temperature	2°C to 8°C
Adjuvant used	ALGEL IMDG
Preservative used	2 Phenoxyethanol
Volume of the vaccine in each	5.0 mL in 5.0 mL Vial
Potency of the Vaccine	7.2 µg/SHD
Dose Size	0.5 mL
No. of Doses per Unit	10 doses
Shelf-life approved(months)	6 Months
Specimen copy of the Label	

Signature/Date: Vijaya 10/05/2021

Name: N. VIJAYA LAKSHMI

Department: Quality Assurance

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Cell Seed (MCB)	
Name and identification of cell strain	Vero MCB P/N : BHAMC 1 . FP, L/N:3006-104986
History of origin of cell strain	ATCC USA, Vero ATCC CCL -81 Lot F-11497.
Source of cell strain	Prepared and characterized at BioReliance
Date of procurement	25-03-04 procured from BioReliance Rockville, MD,USA
No.of bottle/ vials procured	25x1 mL
Passage level of cells	P # 133
Storage conditions	Liquid Nitrogen gaseous phase
Authority that approved cell seed	National Regulatory Authority, India IP
Manufacturer's Working Cell Bank (MWCB)	
Lot number	60120001A
Date approved	Permission obtained under post approval change on 05/04/2019 by DCG(I) vide letter No.6F.N-12-78/BBIL-PAC-vero Bank/17-BD
Date MWCB was established	31/03/2020
Total number of CryoUnits stored	750
Passage level of MWCB	P#138
Maximum passage approved for MWCB	P#159
Storage conditions	In vapour phase of Liquid Nitrogen

Identity test:

Specification	Should show 222 bp band after PCR amplification in Gel Analysis for AGMK species
Method	PCR method
Date of Test	15/05/2020
Date of completion	16/05/2020
Result	222 bp band observed

Adventitious agents
Method :In vivo method
Test in suckling mice:

Specification	Should be free from Adventitious agents.
Number of animals tested	30
Wt. range	Less than 0- 24 hrs old
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.1mL through I/P and 0.01mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Test in adult mice:

Number of animals tested	20
Wt. range	15-20 gms.
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.5mL through I/P and 0.03mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Results	Free from Adventitious agents

Test in guinea pigs:

Number of animals tested	10
Wt. range	350 - 500 gms
Route of inoculation	IP/IC
Quantity injected	1 x 10^7 cells /route 5.0mL through I/P and 0.1mL through I/C
Date of inoculation	19/05/2020
Date of completion	30/06/2020
Observation period	42 days
Results	Free from Adventitious agents

Test in rabbits:

Number of animals tested	10
Wt. range	1.5 – 2.5 kgs
Route of inoculation	I/D, S/C
Quantity injected	1 x 10^7 cells /route 1.0 mL through I/D and 5.0mL through S/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

Test in embryonated eggs:

Method	In-vivo method (Embryonated chicken eggs (5-7 days & 9-11 days old)
Date of test	02/07/2020
Date of completion	16/07/2020
Qty. Inoculated	1 x10^6 cells /route 1.0mL through allantoic cavity and 1.0mL through Yolk sac)
No. of eggs	20
Observation period	14 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Identity test:
Adventitious agents:
In-vitro method:

Method	3 Indicator Cell lines (Vero cells, MRC-5 & Hep 2C cells)
Specification	Free from Adventitious agent
Qty. inoculated	1 x 10^7 cells in 10 mL/cell line
Date of test	22/05/2020
Date of completion	05/06/2020
Observation period	14 days
Result	Free from Adventitious agents

Mycoplasma Test

Method	PCR method
Specification	Should be Negative for Mycoplasma species
Date of test	15/07/2020
Date of Completion	16/07/2020
Observation period	1 day
Result	Negative for Mycoplasma species

Sterility test

Method	Direct Inoculation
Specification	No Growth should be observed
Date of test	15/04/2020
Date of completion	29/04/2020
Observation period	14 days
Result	No Growth observed (sterile)

Haemadsorption test

Method	Guinea Pig RBCs method
Specification	Should be free from Heamadsorbing viruses.
Date of test	04/05/2020
Date of completion	04/05/2020
Observation period	1 day
Result	Free from Heamadsorbing viruses

Growth Characteristics

Method	Subculture method.
Specification	Cells should be healthy and growing
Date of test	24/04/2020
Date of completion	28/04/2020
Observation period	4 days
Result	Cells are healthy and growing

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Homogeneity Test

Method	Dye exclusion cell counting
Specification	90% to 110% recovery should be observed from initial cell count in each cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	102 %

Cell viability

Method	Dye exclusion method of cell counting
Specification	NLT 80%
Date of test	24/04/2020
Date of completion	24/04/2020
Result	99 %

Viable Cell Count

Method	Dye exclusion method of cell counting
Specification	NLT 5×10^6 Cells/Cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	5.2 $\times10^6$ Cells/Cryovial

Cell culture medium

Serum used in cell culture medium for WVS

Animal origin of serum	Fetal Bovine Serum
Vendor	Bovogen Biological Pvt. Ltd.
Catalog Number	SFBS-GI
Batch number	1710A
Expiration Date	Oct 2022

Trypsin used for preparation of cell cultures

Vendor	: Life Technologies
Catalog Number	:27250
Batch number	:2019024
Expiration Date	:Mar 2021

Control of source material

Animal serum used in SARS-CoV-2 Vaccine production

Type	NBCS – Gamma irradiated
Make / Origin	Bovogen/ Australia and New Zealand
Batch No./A.R.No:	RM-04-20-008

Control of Source Material

Name and History of Seed Strain	SARS-CoV-2 Virus seed
Origin of strain	ICMR-National Institute of Virology, Pune, India
Reference No.	SARS-CoV-2 Virus (NIV 2020-770)
Date of procurement	30/04/2020
Titre	$10^{6.5}$ $CCID_{50}$/mL
Passage Level	P#3

Master Seed Lot: (MVB)

Date of preparation of Master Seed Lot	12/05/2020
Titre of Master Seed	$10^{6.25}$ $CCID_{50}$/mL
Batch No.	37020001A
Quantity prepared	400 x 1 mL
Storage	-70 ± 5°C
Passage Level	P#5

Working Seed Lot

Date of preparation	17/05/2020
Quantity prepared	Each 26 mL x 790 PP bottle
Batch No.	37120001A
Passage level	P#6
No. of passage between Master Seed and Working Seed Lot	One
Storage	-70 ± 5°C

Tests on Master Seed Lot:

Identity test

By In-vitro method:

Method	qPCR Method
Specification	Virus titration by qPCR serve as an identity test
Date of test	13/05/2020
Date of completion	13/05/2020
Results	Complies

Sterility

Method	Direct inoculation
Specification	No growth should be observed
Date of test	19/05/2020
Date of Completion	02/06/2020
Observation period	14 days
Result	No growth observed

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Preparation and control of batch

Working Virus strain used for production	: SARS-CoV-2 and bottle No. 141
Virus strain and inoculum seed used for production	: SARS-CoV-2 and bottle No. 02,59,67,75
Substrate used	: Vero Cells
Bioprocess Batch Number	: 37621025A
Type of culture	: Monolayer
Cell culture vessel used	: Bioreactor 2 X 50L (FBR-001 and FBR-002)
Total No. of cell stacks used for control	: 12xCS10
Date of infection	: 04/04/2021
Virus Titre ($CCID_{50}$/mL)	: $10^{6.88}CCID_{50}$/mL
Working Seed Titre (RT PCR)	: $10^{7.44}$ copies/mL
Total Cell count (FBR-001)	: 228000 x 10^6 cells
Total Cell count (FBR-002)	: 220000 x 10^6 cells
Volume of Virus Inoculum (FBR-001)	: 1502 mL
Volume of Virus Inoculum (FBR-002)	: 1450 mL
Multiplicity of Infection	: 0.05

Single virus harvests and purified bulk material :

No. of Harvests: 1

Viral Harvest	**VH I**
Date of harvesting	07/04/2021
Volume(L)	598.0 L

Test on Virus Harvest

Virus Titration (In-vitro)by CPE Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ $CCID_{50}$/mL
Date of test	23/04/2021
Date of completion	30/04/2021
Results	$10^{7.00}$ $CCID_{50}$/mL

Virus Titration by qPCR Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ copies/mL
Date of test	07/05/2021
Date of completion	07/05/2021
Results	$10^{7.29}$copies/mL

Sterility test for bacteria and fungi

Viral Harvest	**VH I**
Specification	No growth should be observed (Sterile)
Date of test	08/04/2021
Date of completion	22/04/2021
Results	:No growth observed (Sterile)

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Inactivation of Whole Virion Corona Virus Harvest

Inactivating agent used	BPL
Concentration	1:2500
Temperature	8±5°C
Incubation period	32 hrs

S.No	Batch Number	Date of inactivation	Date of completion
1	37621025A	07/04/2021	09/04/2021

Purification

Batch Number: 37621025A	Date of Concentration & Purification	Total volume used for purification
VH I	09/04/2021	664.0 L

Buffer exchange and Sterile Filtration of Inactivated SARS-CoV-2 Virus Bulk

Pool Batch No.	37621025A
No. of Inactivated bulk used for pooling	01 (VH I)
Date of pooling	07/04/2021
Specification of the Purified Inactivated Bulk	NLT 20 L
Final volume of the Purified Inactivated Bulk	39.40 L
Storage condition and shelf life	-70±5°C and To be established
Identification	
Specification	ELISA test and SDS PAGE serve as an identity test
Method	ELISA
Date of test	14/04/2021 and 16/04/2021
Date of completion	15/04/2021 and 16/04/2021
Result	Complies
Description	
Specification	Clear colourless, translucent liquid, free from particulate matter
Method	Visual Examination
Result	Clear colourless, translucent liquid, free from particulate matter
pH	
Method	Potentiometry
Specification	7.00-8.00
Date of test	12/04/2021
Result	7.54

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Sterility Test	
Method	Membrane filtration
Specification	No growth should be observed (Sterile)
Date of test	12/04/2021
Date of completion	26/04/2021
Result	No growth observed
Total Protein content	
Specification	NLT 15.00 µg/mL
Method	Lowry et al.
Date of test	12/04/2021
Result	154.83 µg/mL
Corona Virus Inactivation Test	
Specification	No CPE should be observed
Date of test	22/04/2021
Date of completion	29/04/2021
Result	No CPE observed
Corona Virus Amplification Test	
Specification	No residual live virus should be observed in Corona virus Amplification test
Date of inoculation into cell culture	12/04/2021
Cell strain inoculated	Vero cell
Date of 10th day Harvest collection	21/04/2021
Date of 15th day Harvest collection	26/04/2021
Result	No residual live virus observed
Residual cellular DNA content	
Specification	NMT 10.00 ng/SHD
Method	By Qubit Flurometry
Date of test	19/04/2021
Result	0.04 ng/SHD
Residual Bovine Serum Albumin content	
Specification	NMT 50.00 ng/SHD
Method	By ELISA
Date of test	16/04/2021
Result	5.27 ng/SHD
Antigenic Purity by SDS-PAGE	
Specification	Should show only Corona virus specific bands
Method	SDS-PAGE
Date of Test	16/04/2021
Result	Complies

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Bacterial Endotoxins

Specification	Less than 25 international Units(IU) per mL
Method	Gel clot method
Date of Test	13/04/2021
Result	< 12.5 IU per mL

Residual BPL Content

Specification	No Residual BPL Content should be present
Method	Titration method
Date of Test	12/04/2021
Result	No Residual BPL Content present

Residual trypsin content by ELISA method

Specification	For Information only
Method	ELISA method
Date of Test	15/04/2021
Date of completion	15/04/2021
Result	0.08 ng/mL

Preparation and Control of Final Bulk

Final Bulk No.	37F21046A
Date of preparation	22/04/2021

Composition of Final Bulk

Purified Bulk B.No and volume	37621025- 22.61 L
ALGEL-IMDG	11.795 L
Phosphate buffer saline + 2 PE	215.595 L
Total volume	250 L
Storage temperature	2-8 ^{0}C

Test performed on Final Bulk

Description

Specification	White to off white opalescent suspenion, free from extraneous particles
Method	Visual Examination
Date of test	22/04/2021
Result	White opalescent suspension, free from extraneous particles

Identification:

Specification	Should comply with identification test performed on finished product
Method	ELISA
Date of test	28/04/2021
Date of completion	29/04/2021
Result	Complies

pH

Method	Potentiometry
Specification	7.00 -8.00
Date of Test	22/04/2021
Result	7.37

Aluminium content

Method	Titration
Specification	NLT 0.38 mg/ mL and NMT 0.58 mg/mL
Date of Test	22/04/2021
Result	0.47 mg/mL

CERTIFICATE OF PRODUCTION

This is to certify that Final Bulk No.: 37F21046A of Whole Virion, Inactivated Corona Virus Vaccine with 2-Phenoxyethanol has been manufactured as per standard operating procedures to satisfy the requirements for Whole Virion, Inactivated Corona Virus Vaccine as current In House Specification.

Date of transfer of Final Bulk for filling	23/04/2021
Number of containers transferred	5 X 50 L Pressure vessels
Volume of bulk transferred	249.874L

FILLING

Product name	Whole Virion, Inactivated Corona Virus Vaccine
Date of Filling	23/04/2021
Final Batch No	37F21046A
Filling Time	21:15 hrs (23/04/2021) to 09:19 hrs (24/04/2021)
Total No. of Units Filled	41624
Volume in Each Container	6.0 mL
No. of doses per Vial	10 doses
Rejections During Filling and Sealing	39
No. of vials for Filling In process check	88
No. of Units used for Leak test	32
Percentage rejection	0.09%
No. of Units transferred to Inspection	41465

TESTS ON FINAL LOTS

Description	
Method	Visual Examination
Specification	White to off white opalescent suspension, free from extraneous particles
Date of test	26/04/2021
Result	White opalescent suspension, free from extraneous particles
Identification:	
Specification	The ratio of OD of test sample to OD of negative control should not be less than 2
Method	ELISA
Date of test	28/04/2021
Date of completion	29/04/2021
Result	Complies
pH	
Method	Potentiometry
Specification	7.00 -8.00
Date of test	26/04/2021
Result	7.35
Extractable volume	
Method	By Graduated Measuring Cylinder method
Specification	NLT 5.00 mL
Date of test	04/05/2021
Result	6.00 mL
Aluminium content	
Method	Titration
Specification	NLT 0.19 mg/SHD and NMT 0.29 mg/SHD
Date of Test	04/05/2021
Result	0.24 mg/SHD
Residual Bovine Serum Albumin content	
Specification	NMT 50 ng per Single Human Dose
Method	ELISA
Date of test	30/04/2021
Result	5 ng/SHD

Subject- Permission to manufacture of Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in Form CT-23 as per the provisions of New Drugs and Clinical Trials Rules, 2019 under Drugs & Cosmetics Act, 1940 - regarding.

Reference:

1. Permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002dated 03.01.2021.
2. Your letter nos. BBIL/RA/21/173, 177, 187 dated 06.03.2021, 08.03.2021 & 10.03.2021 submitted to this office vide email dated 06.03.2021, 08.03.2021 & 10.03.2021.

Sir,

This is with reference to the permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002 dated 03.01.2021 to manufacture Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode with various conditions.

In this regard, the interim safety and efficacy data of phase III clinical trial of Whole Virion, Inactivated Corona Virus Vaccine (BBV152) in the country submitted to this office was reviewed in consultation with SEC (COVID-19) committee on 08.03.2021 & 10.03.2021 respectively, wherein after detailed deliberation the committee recommended for omission of the condition of the use of the vaccine in clinical trial mode. However, the vaccine should be continued to be used under restricted use in emergency situation condition. Further, the ongoing phase III clinical trial should be continued as per the approved protocol. The firm should update the prescribing information and factsheet accordingly (under restricted use in emergency situation condition). All other conditions of the marketing authorisation shall continue to remain the same.

Accordingly, based on the recommendations of SEC, the condition "*This permission is for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode*" as mentioned in the said permission is amended to read as "*This permission is for restricted use in emergency situation in public interest*". However, you are required to continue ongoing Phase III clinical trial as per approved clinical trial protocol & submit revised summary of product characteristics (SmPC), Prescribing Information (PI) and Factsheet.

Yours faithfully,

(Dr. V. G. Somani)

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Emanuela Medrades

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

ATENÇÃO PARA O NOVO ENDEREÇO DA WEGH ABAIXO NA ASSINATURA Grato

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados. O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Maria Aparecida Affonso Boller

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Bom dia Emanuela,

Infelizmente essas situações acontecem mas nos colocamos à disposição para resolvermos e entendemos a urgência das respostas face ao cenário da pandemia.

Entretanto, devido a nova situação de análises laboratoriais como condicionante pela ANVISA, precisaremos de todos os Procedimentos Operacionais e seus respectivos Relatórios de

Validação, nos ensaios realizados no produto final, para avaliação da internalização dos procedimentos.

Sobre os documentos do Ensaio de Potência enviados ontem, a equipe responsável fez uma avaliação mas necessitará de mais informações, que seguem descritas na tabela abaixo:

Solicitação dos Procedimentos do Ensaio de Potência		
Nº documento	**Título documento**	**Observações**
STP/QCV/135	Potency test (Biological Assay) whole virion Inativacted Corona Virus vaccine by serm neutralization method	Esse POP está no anexo 71, mas não menciona a linhagem de camundongo utilizada no ensaio de potência. Já tem uma versão atualizada do POP?
STP/QCC/072	In vivo Potency of SARS CoV2 vaccine and detection of antibodies by ELISA method	
SP/37/20/01	Plaque Reduction Neutralization Test at 50% or 90% Against SARS CoV2 virus

Caro Ozéias, bom dia.

Uma pena que tivemos esse contratempo, como eu havia recebido a confirmação de entrega do e-mail acabei nem conferindo com vocês.

Honestamente, estamos tentando entender a melhor alternativa a ser seguida após a decisão da ANVISA de solicitar a análise laboratorial por parte do INCQS, pois conforme conversado com a Cida ontem, para o teste de potência será necessário no mínimo 28 dias para execução do ensaio, seguido de mais alguns dias para análise e elaboração do report. E vale ressaltar também que os testes deverão realizados in vivo, conforme método compartilhado.

De qualquer forma, precisamos da orientação do Instituto quanto a quantidade de amostras para realização dos ensaios, além de precisar entender se estamos falando da quantificação de antígeno e Potência ou se irão realizar os ensaios listados no CoA para liberação dos lotes.

Aguardo retorno,

Atenciosamente,

Prezada Emanuela,

A Maria Aparecida realizou o contato por telefone e esclareceu que não havíamos recebido o seu e-mail e anexos. Após o reenvio dos arquivos, a equipe responsável pela avaliação foi informada e em breve retornaremos o contato.

Disponibilizo a conta *incqs.ntpb@fiocruz.br* para ser inserido como cópia nas futuras comunicações pois suporta arquivos maiores e, assim, evitarmos a falha de comunicação que houve.

Caro Ozeias, boa tarde.

Gostaria de saber se possuem algum retorno quanto aos métodos de Potência e quantificação de antígeno ?

Estamos encerrando a justificativa quanto a quantidade máxima de Proteínas, entretanto, tal informação é referente ao Bulk e não ao produto acabado. A Biocarga e demais fatores que acabam tendo oscilações durante a liberação do Bulk mas são estabilizados para liberação do produto acabado.

Atenciosamente,

Caro Ozéias, bom dia.

Gostaria de compartilhar, em complementação as respostas enviadas anteriormente, os seguintes arquivos e suas descrições:

Conteúdo antigênico

Anexo 67 – Assay Validation for estimation of **S1 protein** in Bulk by ELISA – Protocolo de validação de método
Anexo 68 – Assay Validation for estimation of **S1 protein** in Bulk by ELISA – Relatório de validação de método

Potência

Anexo 71 – Assay Validation for estimation of potency by measuring SARS-CoV-2 specific antibody or neutralizing antibody titre – Protocolo de validação de método.
Anexo 72 – Assay Validation for estimation of potency by measuring SARS-CoV-2 specific antibody or neutralizing antibody titre – Relatório de validação de método.

Com isso, informo que teremos ajustes no SLP e CoA quanto a estes dois itens.

Ainda sobre o limite máximo de conteúdo de proteínas totais nos retornarão até amanhã com a justificativa e maiores detalhes.

Permanecemos a disposição,

Caro Ozéias, bom dia.

Obrigada pelo retorno. Seguem meus comentários a seguir em vermelho.

1) As informações referentes ao **Ensaio de Esterilidade** da vacina Covaxin contidas no documento enviado pela Bharat Biotech estão adequadas para a análise de protocolo do referido ensaio.
Ciente, obrigada.

2) Os ensaios físico-químicos compendiais (**pH, Conteúdo de Alumínio, Osmolalidade**) estão descritos de modo adequado à análise de protocolo.
Ciente, obrigada.

3) No ensaio **Volume Extraível** é utilizado o método de Medida em Cilindro Graduado, ressaltamos que a Farmacopeia Brasileira alterou a metodologia para gravimetria. Entretanto, a manutenção do excesso de volume proposto não deve provocar resultados fora de especificação.
Vamos estudar um risk assessment e podemos inserir um Change Control. Mas para os primeiros lotes que virão, o método realmente será de Medida em Cilindro Graduado.

4) Para facilitar a rastreabilidade, sugerimos a inclusão de uma árvore genealógica (fluxograma de produção) no protocolo, com os números dos lotes utilizados/gerados ao longo da produção (por exemplo, working cell bank, working virus seed, bulk, bulk purificado, bulk final e produto).
Faremos isto.

5) Sobre o **Ensaio de Potência**, vários analistas expressaram dúvidas que transcrevo logo abaixo:

a) O produtor já definiu qual será o teste de potência a ser realizado?

A potência já está sendo realizada através de ELISA ou PRNT50 ou MNT50. Ontem as validações foram concluídas ontem e os dados estão sendo compilados e os relatórios serão apresentados nos próximos dias. A definição de quais testes serão aplicadas as próximas liberações de lote, se dará após a validação.

Assim que tivermos este concluído, iremos disponibilizar o SOP.

b) Na página 2/26, foi estabelecida uma potência de 7,2ug/dose. Qual ensaio foi realizado para chegar nesse valor?

Vide 5 a.

c) Em que(quais) etapa(s) da produção o teste é realizado? Qual a especificação para esse ensaio na(s) etapa(s)?

Vide 5 a.

d) Poderiam disponibilizar o POP desse ensaio de potência?

Vide 5 a.

6) Não foi identificado no documento a determinação da **Potência** ou **Conteúdo antigênico**, poderia esclarecer se o teste será feito ou se haverá substituição por outro? Qual a metodologia a ser utilizada?

Vide 5 a.

7) Foi observado que o teste **Conteúdo de Proteínas Totais** (Método Lowry) apresenta apenas valor para mínimo (NLT 15µg/mL). Há dúvidas neste ensaio quanto ao valor máximo admitido, assim, poderiam nos enviar um esclarecimento (justificativa) quanto aos valores limites deste teste?

Estamos aguardando o QA enviar a justificativa e retornaremos também nos próximos dias.

Prezada Emanuela,

Após avaliarmos o documento enviado, fizemos algumas observações e questionamentos de modo a podermos alinhar e consolidar informações necessárias às futuras avaliações do PRPCQ realizados pelo INCQS:

1) As informações referentes ao **Ensaio de Esterilidade** da vacina Covaxin contidas no documento enviado pela Bharat Biotech estão adequadas para a análise de protocolo do referido ensaio.

2) Os ensaios físico-químicos compendiais (**pH, Conteúdo de Alumínio, Osmolalidade**) estão descritos de modo adequado à análise de protocolo.

3) No ensaio **Volume Extraível** é utilizado o método de Medida em Cilindro Graduado, ressaltamos que a Farmacopeia Brasileira alterou a metodologia para gravimetria. Entretanto, a manutenção do excesso de volume proposto não deve provocar resultados fora de especificação.

4) Para facilitar a rastreabilidade, sugerimos a inclusão de uma árvore genealógica (fluxograma de produção) no protocolo, com os números dos lotes utilizados/gerados ao longo da produção (por exemplo, working cell bank, working virus seed, bulk, bulk purificado, bulk final e produto).

5) Sobre o **Ensaio de Potência**, vários analistas expressaram dúvidas que transcrevo logo abaixo:

a) O produtor já definiu qual será o teste de potência a ser realizado?

b) Na página 2/26, foi estabelecida uma potência de 7,2ug/dose. Qual ensaio foi realizado para chegar nesse valor?

c) Em que(quais) etapa(s) da produção o teste é realizado? Qual a especificação para esse ensaio na(s) etapa(s)?

d) Poderiam disponibilizar o POP desse ensaio de potência?

6) Não foi identificado no documento a determinação da **Potência** ou **Conteúdo antigênico**, poderia esclarecer se o teste será feito ou se haverá substituição por outro? Qual a metodologia a ser utilizada?

7) Foi observado que o teste **Conteúdo de Proteínas Totais** (Método Lowry) apresenta apenas valor para mínimo (NLT 15µg/mL). Há dúvidas neste ensaio quanto ao valor máximo admitido, assim, poderiam nos enviar um esclarecimento (justificativa) quanto aos valores limites deste teste?

Cara Maria, bom dia.

Gostaríamos de compartilhar o SLP (Summary Log Protocol) que contém todas as informações relevantes, inclusive em acordo com os documentos de referência disponíveis em outras autoridades. (EDQM e OMS).

Este SLP já está na mesma apresentação que será disponibilizado para o BR e conforme ciência de todos, todos os testes de CQ que foram incluídos, terão sua validação encerrada até o próximo dia 15/05. Dessa forma, teremos algumas pequenas alterações no documento.

De qualquer forma, compartilho para que analisem se este é o suficiente, junto aos demais itens do Anexo II.

Assunto: Reunião GELAS, INCQS e Precisa - Vacina COVAXIN Bharat Biotech

Prezada Sra. Graziela e Equipe Técnica,

Boa tarde.

Gostaríamos novamente de retomar nosso contato com vocês, referente às atualizações dos detalhes técnicos da vacina COVAXIN. O time regulatório da Precisa se encontra na Índia, por este motivo solicitamos por gentileza uma reunião para **quinta-feira dia 6 de maio às 10:00 am**.

Se esta data e horário não for conveniente para vocês, por favor enviar uma sugestão de data e horário.

Desde já agradecemos a atenção.

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados.
O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Maria Aparecida Affonso Boller

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

ATENÇÃO PARA O NOVO ENDEREÇO DA WEGH ABAIXO NA ASSINATURA Grato

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nº 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Subject: ENC: Pedido de Registro de LI - Covaxin

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Ministério da Saúde

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezado Everton,

Boa tarde!

Conversei com a Sra. Emanuela Medrades, que nos lê em cópia, tendo a mesma se comprometido a fazer o ajuste na INVOICE.

Ante ao exposto, segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI) com incoterm **"CIP".**

Informações complementares: CONTRATO 29/2021 - AQUISIÇÃO DA VACINA COVAXIN PARA ENFRENTAMENTO DA PANDEMIA DE COVID-19, PARA USO EMERGENCIAL CONFORME VOTO Nª 163/2021/DIRES/ANVISA. "AUTORIZADA CONFORME A LEI Nª 14.124/2021 E AUTORIZADA CONFORME A LEI 14.125/2021".

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Subject: RES: Solicitação de documentos para pedido, junto a ANVISA, de concessão de excepcionalidade para importação da Vacina COVAXIN.

Prezados, bom dia!

Encaminho ofício anexo da Anvisa em que informa que, devido ao aditamento dos documentos de ontem e o prazo necessário para analisá-los, não será possível a deliberação no prazo de 7 dias uteis previsto na Portaria 476/21.

Att.

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

ATENÇÃO PARA O NOVO ENDEREÇO DA WEGH ABAIXO NA ASSINATURA Grato

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Atenciosamente,

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Cida, bom dia.

Fizemos um follow up junto a BBIL ontem e eles estão com algumas demandas da OMS e nos pediram até sexta-feira dessa semana para retornar com essa resposta.

Estamos insistindo em uma data mais célere. De qualquer forma, gostaria de confirmar se é realmente só uma observação que vocês possuem ou se existem mais pontos a detalhar.

Atenciosamente,

Emanuela Medrades

Subject: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados. O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Prezado Everton,

Boa tarde!

Conversei com a Sra. Emanuela Medrades, que nos lê em cópia, tendo a mesma se comprometido a fazer o ajuste na INVOICE.

Ante ao exposto, segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI) com incoterm **"CIP".**

Informações complementares: CONTRATO 29/2021 - AQUISIÇÃO DA VACINA COVAXIN PARA ENFRENTAMENTO DA PANDEMIA DE COVID-19, PARA USO EMERGENCIAL CONFORME VOTO Nº 163/2021/DIRES/ANVISA. "AUTORIZADA CONFORME A LEI Nº 14.124/2021 E AUTORIZADA CONFORME A LEI 14.125/2021".

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nº 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Boa tarde Emanuela,

I
Reforço que, devido a nova situação de análises laboratoriais como condicionante pela ANVISA, precisaremos de todos os Procedimentos Operacionais e seus respectivos Relatórios de Validação, nos ensaios realizados no produto final, para avaliação da internalização dos procedimentos.

Sobre os documentos do Ensaio de Potência enviados, a equipe responsável fez uma avaliação, conforme mensagem trocada em 08/06/2021, mas necessitará de mais informações, que seguem descritas na tabela abaixo:

Solicitação dos Procedimentos do Ensaio de Potência		
Nº documento	**Título documento**	**Observações**
STP/QCV/135	Potency test (Biological Assay) whole virion Inativacted Corona Virus vaccine by serm neutralization method	Esse POP está no anexo 71, mas não menciona a linhagem de camundongo utilizada no ensaio de potência. Já tem uma versão atualizada do POP?
STP/QCC/072	In vivo Potency of SARS CoV2 vaccine and detection of antibodies by ELISA method	
SP/37/20/01	Plaque Reduction Neutralization Test at 50% or 90% Against SARS CoV2 virus	

Estamos no aguardo dos documentos solicitados e nos colocamos à disposição.

Atenciosamente,

Ozéias Leitão

Cida, bom dia.

Fizemos um follow up junto a BBIL ontem e eles estão com algumas demandas da OMS e nos pediram até sexta-feira dessa semana para retornar com essa resposta.

Estamos insistindo em uma data mais célere. De qualquer forma, gostaria de confirmar se é realmente só uma observação que vocês possuem ou se existem mais pontos a detalhar.

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados.
O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Assunto: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezados, bom dia.

Ozéias, recebemos respostas da Bharat referente aos últimos questionamentos. Segue abaixo:

- STP/QCC/072 - Potência in vivo da vacina SARS CoV2 e detecção de anticorpos pelo método ELISA
- SP/37/20/01 - Teste de Neutralização de Redução de Placas em 50% ou 90% Contra o vírus SARS CoV2

Resposta: Os documentos STP/QCC/072, SP/37/20/01) não estão em uso devido à não disponibilidade de reagentes necessários para a validação do ensaio (mencionado no relatório de validação do método - AMVR/VP/37/12) que foi submetido à ANVISA. No lugar dos documentos citados acima, o teste de por MNT50% foi validado e o Procedimento Padrão de Teste (STP) para teste de potência (ensaio biológico) para vacina por método de neutralização (MNT50%) foi preparado para testes e lançamentos regulares em lote (Ref. STP/QCV/135 em anexo).

- Sobre a linhagem dos camundongos:

Resposta: A versão anterior do SOP 71 e o método de teste de potência (atividade biológica) foram revisados e ref. no STP/QCV/135 Rev No. 00 aprovado em 15/04/2021 (em anexo) e conforme método de teste revisado, informando a linhagem dos camundongos, que é Albino Suíço.

- Valor máximo admitido para o teor de proteína total:

Resposta: O controle de teor de proteínas em nível mínimo é apropriado e a formulação do lote está sendo feita com base no valor mínimo de concentração de proteínas conforme fórmula mestre, portanto, a especificação da substância medicamentosa foi fixada no nível mínimo, ou seja, NLT 15µg/ml.

Qualquer dúvida, nos mantemos à disposição.
Obrigada.

Atenciosamente,

Great Place To Work. Certificado

Assunto: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Boa tarde Emanuela,

I
Reforço que, devido a nova situação de análises laboratoriais como condicionante pela ANVISA, precisaremos de todos os Procedimentos Operacionais e seus respectivos Relatórios de Validação, nos ensaios realizados no produto final, para avaliação da internalização dos procedimentos.

Sobre os documentos do Ensaio de Potência enviados, a equipe responsável fez uma avaliação, conforme mensagem trocada em 08/06/2021, mas necessitará de mais informações, que seguem descritas na tabela abaixo:

Solicitação dos Procedimentos do Ensaio de Potência		
Nº documento	**Título documento**	**Observações**
STP/QCV/135	Potency test (Biological Assay) whole virion Inativacted Corona Virus vaccine by serm neutralization method	Esse POP está no anexo 71, mas não menciona a linhagem de camundongo utilizada no ensaio de potência. Já tem uma versão atualizada do POP?
STP/QCC/072	In vivo Potency of SARS CoV2 vaccine and detection of antibodies by ELISA method	
SP/37/20/01	Plaque Reduction Neutralization Test at 50% or 90% Against SARS CoV2 virus	

Estamos no aguardo dos documentos solicitados e nos colocamos à disposição.

Atenciosamente,

Ozéias Leitão

Cida, bom dia.

Fizemos um follow up junto a BBIL ontem e eles estão com algumas demandas da OMS e nos pediram até sexta-feira dessa semana para retornar com essa resposta.

Estamos insistindo em uma data mais célere. De qualquer forma, gostaria de confirmar se é realmente só uma observação que vocês possuem ou se existem mais pontos a detalhar.

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados.
O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Fernanda, bom dia.

Em complemento as repostas enviadas ontem, compartilho os dados utilizados para apreciação, sendo:

1. **Collatect_PD_BBV152** – Referente aos desvios de protocolos de menor impacto, com sua descrição e ação corretiva/preventiva.
2. **Subjects_Visits_BBV152_STATUS2_Interim_report** – Fornecida pela equipe responsável pelo IWRS, onde é possível ver os 24.432 participantes que haviam recebido a primeira e segunda dose além de outras informações como screening number, gênero, idade, data de cada uma das visitas e status do participante. (*Enrolled, discontinued, unblided*...)
3. **DAY 42 Positive Cases_FEndpoint** – Informações disponibilizadas pelo IQVIA com os 127 casos de Covid19 Sintomáticos utilizados para o desfecho primário do estudo. No documento é fornecido as seguintes informações:

    - as datas da primeira e segunda dose,
    - data do follow-up de 42 dias,
    - os sintomas informados pelo participante,
    - a data do PCR positivo,

- Quantos dias após primeira e segunda dose,
- Informações clínicas como SpO2, exames de imagem e outros quando aplicável,
- Terapia medicamentosa para tratamento do Covid19, e
- Observação se o mesmo se enquadra no critério de Covid19 grave conforme Guideline do FDA.

Envio novamente o segundo relatório interino de fase 3 o qual essas informações se referem, para facilitar e permanecemos a disposição,

Assunto: Re: Documentação prévia à submissão - Covaxin

Fernanda, boa tarde. Como vai ?

Como estamos tratando mais de um assunto ao mesmo tempo, as informações estão ficando um pouco sobrepostas. Abaixo separei por itens em atual tratativa junto a agência:

- Os documentos que foram enviados nessa pasta do OneDrive são referentes ao processo 25351455725202115 e Expediente Nº 1809912212 realizado no dia 11/05/21 com assunto 11800, para que a ANVISA possa analisar o documento de uma maneira formal. Esse protocolo foi feito para que após a análise de vocês, em a documentação estando de acordo, a Precisa possa dar continuidade no processo de pedido de importação excepcional através do Ministério da Saúde.

- Quanto ao DDCM, pedimos uma reunião junto a CONEP e gostaria de contar com a sua participação, bem como da Brenda e do Francis, para tratarmos das questões apresentadas no termo de compromisso. Hoje estaremos aditando o DDCM para inserir os detalhes das SAEs dos ensaios clínicos, a relação causal, inclusive dos óbitos conforme solicitado.

- E também, para manter todos na mesma página, teremos uma reunião amanhã com a GGFIS onde a BBIL irá apresentar todas as ações atendidas do CAPA para seguirmos com o Peticionamento do CBPF.

Apesar de ter resumido acima cada uma das atividades, iremos nos organizar sempre em e-mails separados para cada um, para uma melhor comunicação.

Permanecemos a disposição,

Bom dia, Amanda

Vc se refere à documentação do DDCM ou da submissão prévia à importação? Os links eram os mesmos?
Só para estarmos na mesma página, o que queríamos era que a empresa informasse qual documento enviado na submissão prévia à importação seria diferente ou com novas informações em comparação com o que foi encaminhado no DDCM.
Foi isso que a empresa disponibilizou?

Subject: RES: Documentação prévia à submissão - Covaxin

Prezada Amanda,

Solicitamos que sejam sinalizados quais documentos são diferentes em comparação ao que foi enviado para o DDCM e cumprimentos de exigência. Verificamos que há muita informação repetida e gostaríamos de nos concentrar naquilo que for diferente.
Seria possível o envio dessa informação ainda hoje?

Atenciosamente,

E-mail: apoio.se@saude.gov.br

Assunto: **Solicitação de autorização para importação em caráter Excepcional de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN**

Referência: Caso responda este Ofício, indicar expressamente o Processo nº 25351.915151/2021-48.

Senhor Secretário Executivo,

1. Cumprimentando-o cordialmente, faço referência ao Ofício nº 129/2021/DLOG/SE/MS, por meio do qual o Ministério da Saúde requer a importação em caráter excepcional de 20.000.000 (vinte milhões) de doses da vacina Covaxin / BBV152. Os documentos recebidos encontram-se em análise pela Agência, à luz da Lei nº 14.124/21 e RDC nº 476/21.

2. Nesse sentido, verifica-se que novos documentos foram acostados ao processo na data de hoje, 31/05, a saber: *Clinical Responses* – Parte I; *Mock Shell Version 1.0; BBV152 SAP; Development and Licensure for Covid19 – FDA; Case Report Form – CRF;* Diário do Participante; ICD; Questionário FUP Telefone. Tratam-se de documentos requeridos pelas áreas técnicas da Anvisa durante as tratativas relacionadas ao novo pedido de importação da vacina e que serão analisados com a brevidade que o caso requer.

3. Dessa forma, diante da juntada dos novos documentos ao processo e da necessidade de sua análise, não será possível a deliberação da Anvisa no prazo de 7 (sete) dias úteis previsto no § 1º do art. 16 da Lei nº 14.124/21.

4. Sem mais, a Anvisa coloca-se à disposição para eventuais esclarecimentos que se façam necessários.

Atenciosamente,

Documento assinado eletronicamente por **Karin Schuck Hemesath Mendes**, **Chefe de Gabinete**, em 31/05/2021, às 21:42, conforme horário oficial de Brasília, com fundamento no art. 6º, § 1º, do Decreto nº 8.539, de 8 de outubro de 2015 http://www.planalto.gov.br/ccivil_03/_Ato2015-2018/2015/Decreto/D8539.htm.

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Cc: Alex Lial Marinho <alex.marinho@saude.gov.br>; Rodrigo Otavio Moreira da Cruz <rodrigo.cruz@saude.gov.br>
Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Boechat, pode nos auxiliar nesta demanda da CNN Brasil sobre licença de importação Covaxin?

Veículo: CNN Brasil
Repórter: Leandro Resende
Pauta: Licença de importação da Covaxin
Deadline: Não informado

Demanda:
Uma delegação da Precisa Medicamentos está na Índia para ajudar na liberação das doses da Covaxin para o Brasil. Integrante me relatou que só falta a Licença de Importação, e que trata-se de trâmite burocrático que deve ser superado por atuação do Ministério da Saúde.

Podem me esclarecer sobre isso?

Anexos: PROFORMA INVOICE - BRAZIL.pdf

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

"Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto
- Informar peso liquido e bruto
- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?"

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.
Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).
No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIONTECH

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de narço de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

ANVISA
Agência Nacional de Vigilância Sanitária

VOTO Nº 163/2021/SEI/DIRE5/ANVISA

Processos nº 25351.913403/2021-02, 25351.913407/2021-82, 25351.913406/2021-38, 25351.913405/2021-93, 25351.914307/2021-73, 25351.916101/2021-88 e 25351.915151/2021-48.

Analisa pedidos do **Ministério da Saúde** e dos **Estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí** de autorização excepcional e temporária para importação e distribuição de vacinas para Covid-19 destinadas ao enfrentamento da emergência de saúde pública de importância nacional decorrente do surto do novo coronavírus (SARS-CoV-2), nos termos da Lei nº 14.124, de 10 de março de 2021.

Posição do RELATOR: ***FAVORÁVEL COM CONDICIONANTES E ASSINATURA DE TERMO DE COMPROMISSO.***

Área responsável: DIRE5

Relator: **Alex Machado Campos**

1. CONSIDERAÇÕES INICIAIS

Examinaremos, nesta sessão, os pedidos de autorização excepcional e temporária para importação, distribuição e uso de vacinas para Covid-19, da Sputnik e da Covaxin, nos termos da Lei nº 14.124, de 10 de março de 2021.

Em homenagem ao princípio da eficiência e considerando que as solicitações se apoiam em mesma dinâmica regulatória, em acordo com esta diretoria colegiada, trago a minha análise, sobre as importações das duas vacinas, de maneira unificada. As discussões e coleta de votos, contudo, serão realizadas individualmente, em benefício da melhor compreensão de cada um dos casos.

Destaco, ainda, que os pedidos de importação da vacina Sputnik estão reunidos em um só bloco, e serão analisados nesta sessão aqueles pedidos que tem processos ativos em curso na agência, em outras palavras, aqueles que pendem da análise de recurso apresentado contra a decisão originária da Anvisa, ou que ingressaram, com novos fundamentos, com outro pedido de importação. Dessa forma, analisaremos em bloco os pedidos dos estados da **Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí.**

No caso da vacina Covaxin, trata-se de novo pedido formulado pelo Ministério da Saúde, mediante a apresentação de documentos e elementos novos.

Antes de pronunciar propriamente meu voto, presidente, peço licença para tecer breves considerações.

Minhas palavras iniciais são novamente de agradecimento. Obrigado Gustavo Mendes, obrigado Ana Carolina, obrigado Suzie Marie pelas apresentações e por trazerem a síntese das manifestações as áreas técnicas da Anvisa. Em nome deles, agradeço a cada um dos servidores que participaram das discussões em torno dessas importações.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1989

Somos testemunhas: nossos servidores têm vivenciado os dias mais desafiadores das suas trajetórias profissionais. São dilemas intelectuais e científicos; discussões sobre os protocolos tradicionais; revisão de modelos regulatórios. Quebramos paradigmas nesta Agência todos os dias. Eu cumprimento com muita gratidão os técnicos da Anvisa por esse esforço sincero. Não falta coragem para debater com altivez e refletir com humildade, sem descuidar do dever de ofício: cuidar da saúde das pessoas.

Cada passo deve ser medido. O desafio permanente é estabelecer se os benefícios de uma decisão no campo da vigilância sanitária são maiores que os riscos da solução analisada. Numa pandemia em que milhares de pessoas morrem diariamente, essa decisão, de avaliar plataforma vacinais, é sempre muito complexa. De um lado a necessidade de mais vacinas; do outro, o compromisso de levar vacinar seguras, eficazes e de qualidade para a população. Essa é a permanente tensão que nos mobiliza.

É sempre uma decisão multisaberes, que deve se escorar na ciência e nos mecanismos que ela mesmo nos oferece para mitigar riscos que eventualmente precisemos admitir. O benefício deve sempre superar o risco. E os riscos, por sua vez, devem ser enfrentados com transparência e com medidas de controle.

A decisão de hoje é mais uma dessas decisões dificílimas a que estamos submetidos desde o início da pandemia. Os nossos dilemas e as nossas convicções, mesmo que não coincidentes, trilham o caminho da absolta transparência.

Buscamos, a todo instante, as decisões menos imperfeitas; e qualquer delas devem ser submetidas ao escrutínio público permanente. O formato dessa reunião explica esse compromisso, que é uma necessidade incontornável da nossa realidade. O cidadão deve ter direito a saber tudo. De tudo mesmo. A imprensa, a academia, os especialistas, por sua vez, tratam de exercer crítica qualificada em benefício desse mesmo cidadão que nos empenhamos em proteger.

Aqui, novamente, como lá trás, em janeiro, quando aprovamos as primeiras vacinas, na condição de uso emergencial, remanescem os dramas pessoais nessa disputa com vírus; o sofrimento do próximo; testemunhos; cenas que chocam, sensibilizam e amedrontam. Amigos e familiares adoecidos ou que se foram. A situação hoje é ainda pior, essa é a verdade. Os números mostram.

De novo somos tomados pelas reflexões solitárias, pelos dilemas, dúvidas, incertezas, só resolvidas diante do esforço coletivo e compartilhado do trabalho. Assim chegamos até aqui, mesmo diferentes, e no respeito à divergência.

***

Feitas essas observações, passo a proferir o meu voto, que se baliza nos pareceres das áreas técnicas envolvidas nesta análise, as quais respondem, respectivamente, pelas ações de registro, fiscalização, monitoramento e farmacovigilância.

Antes de seguir com as análises individualizadas dos pedidos, cumpre promover esclarecimento inicial quanto ao eixo regulatório que guiará, na sequência, a análise e, ao final, espelhará o meu voto.

Os pedidos de importação protocolados pelos entes subnacionais e pelo ministério da saúde foram ancorados em legislação recente, a Lei nº 14.124/21, que veio a disciplinar modalidade regulatória nova, denominada: Autorização Excepcional e Temporária para a Importação.

Essa modalidade instituída pela lei em nada se confunde com os processos que resultam em concessão de registro da vacina ou que permitem o seu uso emergencial. Nas modalidades regulatórias de registro de uma vacina ou de autorização do uso emergencial, o tipo de trabalho exercido pela Anvisa é do público conhecido, assim como do meio acadêmico e científico. Trata-se de exame robusto, detalhado, de reconhecido rigor analítico, ensejando, ou não, o aval e o selo da Anvisa em função dos aspectos de segurança, qualidade e eficácia.

Na importação excepcional, objeto da presente deliberação, estamos diante de modalidade regulatória com rito, em princípio, mais abreviado e acelerado, na medida em que a Anvisa se limitaria a inferir, a partir de um relatório técnico emitido por outra autoridade sanitária, se aspectos de segurança, qualidade e eficácia foram observados por tal autoridade.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1990

De acordo com o art. 16, da Lei 14.124/21, a União, os Estados, os Municípios e o Distrito Federal podem promover a importação excepcional de vacinas para combater a Covid-19, que não possuam o registro sanitário definitivo na Anvisa, desde que registradas ou autorizadas para uso emergencial pelas autoridades sanitárias estrangeiras que define, entre as quais, a autoridade da Rússia e autoridade Indiana.

Estabeleceu a lei, também, que a Anvisa, conforme estabelecido em ato regulamentar próprio - RDC nº 476/21 -, deve oferecer parecer e decidir em sete dias úteis sobre o pedido de importação. Contudo, prevê a norma que, na ausência do relatório técnico de avaliação da autoridade sanitária internacional, o prazo dessa decisão será de até 30 (trinta) dias.

Tal procedimento se assemelha ao já estabelecido pela RDC nº 203/2017, que dispõe sobre os critérios e procedimentos para importação, em caráter de excepcionalidade, de produtos sujeitos à vigilância sanitária sem registro na Anvisa. De acordo com esta Resolução, podem ser autorizados para importação, em caráter de excepcionalidade, os imunobiológicos integrantes do Programa Nacional de Imunização, adquiridos por meio do Fundo Rotatório para Aquisições de Imunobiológicos da Organização Pan-americana da Saúde (Opas)/Organização Mundial de Saúde (OMS). Esses produtos devem ser pré-qualificados pela OMS, mas também não passam por uma análise de qualidade, segurança e eficácia pela Anvisa. Esse instrumento regulatório é essencial para manutenção do abastecimento do Programa Nacional de Imunização (PNI) e para o fornecimento de vacinas à nossa população.

Apesar das partes comuns que ensejam a análise conjunta dos pedidos, meu voto comporta capítulos específicos sobre a Sputnik e a Covaxin.

Para melhor compreensão pública da metodologia de análise adotada, optei pelo seguinte roteiro.

As duas vacinas foram objeto de pedidos de importação já analisados e não autorizados pela Anvisa, por motivos e razões já amplamente divulgados.

Nesse sentido, trilharei a análise dos novos pedidos de importação da seguinte forma: na primeira parte do exame individualizado de cada uma das vacinas, observarei se as razões que levaram ao indeferimento das importações foram superadas ou de algum modo mitigadas pelo desenvolvedor neste novo pedido; na segunda parte, destacarei, quando houver, as incertezas ou inconsistências remanescentes, apontando ao final se elas implicam o indeferimento ou não do pedido.

2. DA IMPORTAÇÃO DA VACINA SPUTNIK V

2.1 Relatório

Analisa-se os pedidos de autorização para importação excepcional da vacina Sputnik V, nos termos da Lei nº 14.124, de 10 de março de 2021, dos Estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí.

Os processos foram autuados sob as numerações abaixo descritas, com os respectivos quantitativos e cronogramas.

Estado / Município	Processo SEI	Ofício	Data de recebimento	Cronograma para 2021 (doses)
Bahia	25351.913403/2021-02	Ofício nº PGE/PA n.160/2021	29/04/2021	Abril: 520.620; Maio: 1.301.540; Junho: 2.603.090; Julho: 5.345.030 Total: 9.770.280
Maranhão	25351.913407/2021-82	Ofício nº 121/2021-GAB/PGE	29/04/2021	Abril: 244.210; Maio: 610.500; Junho: 1.221.000; Julho: 2.507.150 Total: 4.582.860
Sergipe	25351.913406/2021-38	Ofício nº 002/2021/NATS/PGE/SE	29/04/2021	Abril: 21.310; Maio: 53.290; Junho: 106.570; Julho: 218.830 Total: 400.000
Ceará	25351.913405/2021-93	Of. 1.712/ 2021 – GABSEC/SESA	07/05/2021	Abril: 385.158; Maio: 962.896; Junho: 1.925.792; Julho: 2.307.764 Total:

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1991

				5.581.610
Pernambuco	25351.914307/2021-73	Ofício nº 41/2021 - GAB/SES	14/05/2021	Abril: 213.150; Maio: 532.850; Junho: 1.065.710; Julho: 2.188.290 Total: 4.000.000
Piauí	25351.916101/2021-88	Ofício Nº: 337/2021/PGE-PI/GAB/AP1	01/06/2021	Abril: 115.820; Maio: 289.560; Junho: 579.110; Julho: 1.189.120 Total: 2.173.610

Importa esclarecer que a Anvisa já deliberou sobre pedidos anteriores de importação excepcional da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública de 26 de abril de 2021. Naquela oportunidade, o relatório técnico de avaliação da autoridade sanitária internacional requerido pela Lei nº 14.124/21 não foi apresentado e os aspectos técnicos lacunosos não foram supridos, conforme extensamente demonstrado naquela oportunidade. Diante disso, a Diretoria Colegiada decidiu, por unanimidade, não autorizar os pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V.

Após a deliberação ocorrida em 26/04, os estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí apresentaram os Ofícios nº PGE/PA nº 160/2021, nº 121/2021-GAB/PGE, nº 002/2021/NATS/PGE/SE, Of. 1.712/ 2021 – GABSEC/SESA, Ofício nº 41/2021 - GAB/SES e Ofício Nº 337/2021/PGE-PI/GAB/AP1, respectivamente, enviados com o objetivo de oferecer esclarecimentos técnicos e documentação comprobatória da eficácia, qualidade e segurança da vacina Sputnik V, além de requerer novo pronunciamento sobre o assunto.

Ato contínuo, o estado da Bahia enviou o Ofício nº PGE/PA n. 168/2021 e o estado do Maranhão enviou o Ofício n.º 001/2021-ASS-ESPECIAL/PGE, com requerimento de juntada de dois novos documentos, visando subsidiar a reapreciação do pleito de autorização de importação excepcional da vacina Sputnik V.

Dessa forma, em atenção ao princípio da eficiência administrativa, os pedidos de reapreciação dos pleitos de autorização de importação excepcional da vacina Sputnik V foram recepcionados pela Anvisa como novos pedidos de importação, o que ensejou a abertura dos processos administrativos ora em deliberação. Tais processos tiveram como marco inicial para atendimento aos prazos da Lei nº 14.124/2021 o dia do protocolo, conforme tabela acima.

No dia 07/05, foi enviado o Ofício nº 1084/2021/SEI/GADIP-CG/ANVISA ao estado da Bahia, o Ofício nº 1083/2021/SEI/GADIP-CG/ANVISA ao estado do Maranhão, o Ofício nº 1085/2021/SEI/GADIP-CG/ANVISA ao estado de Sergipe; no dia 11/05, o Ofício nº 1111/2021/SEI/GADIP-CG/ANVISA ao estado do Ceará; e, no dia 18/05, o Ofício nº 1180/2021/SEI/GADIP-CG/ANVISA ao estado de Pernambuco. Nos referidos Ofícios, a Agência informou que os documentos encaminhados no dia 29/04 não cumpriam o requisito referente à apresentação do relatório técnico de análise da autoridade sanitária estrangeira, disposto pelo § 3º do art. 16 da Lei nº 14.124/2021, nem traziam novos elementos que refutassem as razões que motivaram a não autorização dos pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública da Diretoria Colegiada da Anvisa. Ademais, as manifestações das áreas técnicas da Anvisa referentes aos documentos encaminhados foram enviadas aos estados (Nota Técnica nº 63/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA; Nota Técnica nº 48/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA; e Relatório de avaliação da resposta encaminhada pelo Instituto Gamaleya sobre os motivos que levaram à negativa de importação da vacina Sputnik V). Por fim, os Ofícios informaram que os processos se encontravam em diligência e que a deliberação da Anvisa ocorreria de acordo com o prazo estabelecido pela Lei nº 14.124/2021.

No dia 13/05, foi enviado o Ofício nº 1145/2021/SEI/GADIP-CG/ANVISA ao estado da Bahia e o Ofício nº 1139/2021/SEI/GADIP-CG/ANVISA ao estado do Maranhão. Tais documentos informaram aos estados que os novos documentos encaminhados por meio do Ofício nº PGE/PA n. 168/2021 e Ofício nº 001/2021-ASS-ESPECIAL/PGE, apresentados no dia 04/05, não cumpriam o requisito referente à apresentação do relatório técnico de análise da autoridade sanitária estrangeira, disposto pelo § 3º do

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1992

art. 16 da Lei nº 14.124/2021, nem traziam novos elementos que refutassem as razões que motivaram a não autorização dos pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública da Diretoria Colegiada da Anvisa. Novamente, as manifestações das áreas técnicas foram enviadas aos estados (Nota Técnica nº 54/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA e Despacho nº 77/2021/SEI/GFARM/GGMON/DIRE5/ANVISA). Por fim, os Ofícios da Anvisa ressaltaram, novamente, que os processos se encontravam em diligência e que a deliberação da Anvisa ocorreria de acordo com o prazo estabelecido pela Lei nº 14.124/2021.

No dia 21/05, a Anvisa recebeu o Ofício nº PGE/PA n. 201/2021 do estado da Bahia e o Ofício nº 146/2021-GAB/PGE do estado do Maranhão; no dia 24/05, o Ofício nº 003/2021/NATS/PGE/SE do estado de Sergipe; e no dia 25/05, o Ofício GABSEC/SESA nº 2009/2021 do estado do Ceará. Todos encaminharam o relatório técnico emitido pelo Ministério da Saúde da Rússia e exigido com base no §3º do art. 16 da Lei nº 14.124/2021, com vistas à comprovação do atendimento dos requisitos técnicos de eficácia, qualidade e segurança da vacina em análise.

No dia 25/05, o Consórcio Nordeste enviou o Ofício CIDSNE/PRESID nº 025/2021, o qual apresentava ponderações e proposições para contribuir com a tomada de decisão acerca do pedido de autorização excepcional da vacina Sputnik V protocolado pelos estados do Nordeste. Dessa forma, compreendendo que cabe às autoridades públicas compartilhar as responsabilidades, o Consórcio Nordeste reiterou o pedido de aprovação em caráter excepcional da vacina Sputnik V e propôs a adoção, em caráter de excepcionalidade, das seguintes medidas de contingência que estariam sob a responsabilidade dos estados envolvidos:

1. Assinatura de um Termo de Compromisso onde estejam definidas tais responsabilidades;
2. Realização de um estudo de efetividade, a partir da importação e aplicação dos primeiros lotes da vacina, utilizando-se de um protocolo a ser desenhado de forma acordada com a Anvisa e executado segundo as normas de Boas Práticas Clínicas, por centros de pesquisa habilitados, incluindo aqueles ligados às Universidades presentes nos estados importadores;
3. Implementação de um Programa de Monitoramento de Eventos Adversos (Farmacovigilância) sob a responsabilidade conjunta das autoridades estaduais de vigilância, voltado ao permanente registro e investigação de eventos adversos relacionados com a utilização da vacina e a devida comunicação à Anvisa;
4. Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o INCQS/Fiocruz.

No dia 31/05, a Anvisa enviou os Ofícios nºs: 1294/2021/SEI/GADIP-CG/ANVISA à Bahia; 1293/2021/SEI/GADIP-CG/ANVISA ao Maranhão; 1292/2021/SEI/GADIP-CG/ANVISA à Sergipe; 1291/2021/SEI/GADIP-CG/ANVISA ao Ceará. Os referidos Ofícios contextualizaram o histórico dos processos administrativos na Agência e informaram que, considerando-se a quantidade de novos documentos e informações juntados aos autos pelos estados, incluindo-se a apresentação do relatório técnico de avaliação emitido pelo Ministério da Saúde da Federação da Rússia, além da formalização pelo Consórcio Nordeste do seu compromisso de executar medidas de contingência para resguardar a segurança, qualidade e eficácia da vacina Sputnik V, a Anvisa entende indispensável que seja efetuada análise técnica complementar a fim de decidir de forma exauriente sobre os pedidos dos Estados. Dessa forma, resguarda-se que não ocorram prejuízos nem aos requerentes e nem à população brasileira com uma decisão que não seja conclusiva ou que não tenha considerado todos os elementos técnicos juntados ao processo sobre a importação e a distribuição da vacina Sputnik V em nosso país, matéria de grande relevância nacional, motivo pelo qual, nos termos do art. 45 da Lei nº 9.784/99, com base no poder geral de cautela na seara administrativa, a deliberação final da Anvisa sobre os requerimentos administrativos ocorreria até o dia 08/06/21 (terça-feira).

Portanto, restando demonstrado o histórico dos processos administrativos no âmbito da Anvisa e os novos elementos acostados aos autos, esclareço que os pleitos ora em deliberação foram

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1993

instruídos com os documentos apresentados nos novos pedidos e com toda a documentação que instruiu os processos iniciais. Dessa forma, foram apresentados pelos solicitantes os seguintes documentos que compõem os processos:

- Ofícios contendo o cronograma de importação;

- Declaração atestando o descumprimento do Plano Nacional de Operacionalização da Vacinação contra a Covid-19;

- Declaração atestando a adoção das estratégias de monitoramento e cumprimento das diretrizes de farmacovigilância;

- Certificado do registro do produto na Rússia, país onde o produto é fabricado;

- Relatório técnico de avaliação da vacina emitido pelo Ministério da Saúde da Rússia.

Assim, toda a documentação requerida pela Lei nº 14.124/21 e pela RDC nº 476/21 foi apresentada pelos requerentes nos processos ora em deliberação. Além de ter sido apresentado o relatório de avaliação emitido pela autoridade sanitária responsável pela aprovação do registro da vacina, conforme requerido pela citada Lei e cuja ausência também motivou a negativa do pedido anterior de importação, o Consórcio Nordeste enviou Ofício que traz medidas de contingência importantes para o caso de aprovação dos pleitos de importação, sinalizando a preocupação dos gestores dos estados no monitoramento do uso da vacina no Brasil e nas medidas de proteção à saúde da população.

***

Conforme ressaltei no início do meu voto, o olhar capital da minha análise se deterá em observar em que medida as lacunas de informação relatadas por mim, no dia 26/04, e que ensejaram o indeferimento, unânime, da autorização de importação, foram superadas a partir dos documentos apresentados nesse novo pedido.

Nesse sentido, cumpre destacar que consta desses novos pedidos de importação um documento de enorme relevância para o processo de deliberação, inexistente na avaliação anterior, e que funciona como requisito legal e balizador de referência para as avaliações técnicas da agência.

Faço menção a apresentação, nessa nova análise, do **relatório técnico de avaliação da vacina emitido pela autoridade sanitária estrangeira**, no caso, da Rússia, em atendimento ao § 3º, do art. 16, da Lei nº 14.124.

Além do referido relatório, merece realce o envio de um ofício, subscrito pelo Consórcio Nordeste, contendo ponderações e proposições para contribuir com a tomada de decisão acerca dos pedidos de autorização excepcional da vacina Sputnik V protocolados pelos estados do Nordeste, dentre as quais a adoção, como já mencionei, em caráter de excepcionalidade, de medidas de contingência que estariam sob sua responsabilidade especialmente a assinatura de Termo de Compromisso perante esta Agência, realização de estudos de efetividade, a partir da importação e aplicação dos primeiros lotes da vacina, implementação de programa de monitoramento de eventos adversos (farmacovigilância) e submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios públicos.

No julgamento anterior, diante da ausência do relatório técnico da vacina, a Anvisa buscou todos os elementos de avalição disponíveis para tentar identificar, por meio desses elementos, se seria possível aferir os aspectos de segurança, qualidade e eficácia mínimos e necessários à autorização da importação excepcional.

Nesse sentido, avaliamos, por exemplo, documentos de posse da agência por força da análise em curso em outro processo dentro da agência, o de uso emergencial. No mesmo propósito, promovemos inspeções em plantas fabris da Sputnik na Rússia e tentamos obter informações a respeito da vacina junto a dezenas de países e também por intermédio de outras instituições de regulação com as quais a Anvisa estabelece parceria institucional.

Naquela ocasião, por força da ausência do relatório técnico e diante das informações colhidas a partir desse conjunto de iniciativas, um número significativo de aspectos foram apontados pela Anvisa, os quais refletiam uma fotografia das condições da plataforma vacinal naquele instante; alguns

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1994

desses aspectos, conforme pareceres das áreas técnicas, foram superados a partir de informação contida no relatório técnico apresentado, mas outros aspectos permanecem em debate, e devem ser sopesados, na minha opinião, à luz do atual cenário sanitário e epidemiológico de nosso país.

2.2 Da vacina Sputnik V

A Vacina Sputnik V (Gam-COVID-Vac) é fabricada na Rússia e está registrada perante o Ministério da Saúde da Rússia, Órgão Sanitário do mesmo país.

A vacina consiste em dois componentes:

• o componente 1 vem na forma de partículas virais recombinantes baseadas no adenovírus humano sorotipo 26 que carrega o gene da proteína do vírus SARS-CoV-2;

• o componente 2 vem na forma de partículas virais recombinantes baseadas no adenovírus humano do sorotipo 5 que carrega o gene da proteína S do vírus SARS-CoV-2.

A vacinação é administrada em duas etapas: primeiro 0,5 mL do Componente I e, em seguida, três semanas depois, 0,5 mL do componente II. Após a administração da vacina, a equipe médica deve acompanhar o estado de saúde do paciente durante um período de 30 minutos.

Existem dois regimes aprovados para o armazenamento e transporte da vacina: i) a vacina congelada deve ser transportada e armazenada em local escuro a uma temperatura de -18°C ou menos. O prazo de validade dessa vacina é de 6 meses a partir da data de produção. O descongelamento leva de 3 a 5 minutos. Uma vez descongelada, essa vacina deve ser administrada dentro de 120 minutos; ii) a vacina na forma líquida (fabricada no site da Generium) deve ser transportada e armazenada em local escuro a uma temperatura de +2 a + 8°C. O prazo de validade dessa vacina é de 2 meses a partir da data de produção. Uma vez retirada da geladeira, tal vacina deve ser administrada dentro de 120 minutos.

A vacina Gam-COVID-Vac ou Sputnik é indicada para a imunização ativa de indivíduos ≥ 18 anos de idade para a prevenção da Covid-19.

2.3 Do relatório de avaliação emitido pela autoridade estrangeira

No caso da importação da vacina Sputnik, a apresentação do relatório técnico da vacina emitido pela autoridade de regulação estrangeira **é fato processual de relevo**; traduz-se em substancial mudança do quadro probatório, uma vez que a deliberação anterior, como já mencionado, seguiu e evoluiu sem se pautar pelas balizas de tal relatório técnico previsto em lei. Em síntese, esse documento inexistia, e ele agora foi apresentado à agência.

Merece registro que o legislador, por meio da Lei nº 14.124/21, estabeleceu a possibilidade de importação excepcional de vacina, sem registro na Anvisa, quando o pedido é lastreado em registro ou em uso emergencial de vacina ou medicamento obtido ou aprovado em autoridade regulatória estrangeira definida pela lei.

Para tanto, a norma dispõe que o pedido deve ser guarnecido com o próprio documento de registro ou com o certificado de uso emergencial alcançado na autoridade estrangeira, e ainda com o relatório técnico da avaliação da vacina, emitido ou publicado por aquela autoridade sanitária internacional, tendo que ser capaz de comprovar que a vacina atende aos padrões de qualidade, de eficácia e de segurança estabelecidos pela OMS ou pelo ICH e pelo PIC/S.

Assim, diante da apresentação do relatório técnico da vacina previsto na lei, cabe à Anvisa avaliar e decidir – já que lhe compete, nos termos da mesma lei, oferecer parecer sobre a importação – se o relatório apresentado atende aos requisitos de qualidade, de eficácia e de segurança estabelecidos na norma.

Pois bem. No dia 21/05, os requerentes encaminharam à Anvisa o relatório técnico de avaliação emitido pelo Ministério da Saúde da Federação Russa, em atendimento ao requerimento constante no § 3º do art. 16 da Lei nº 14.124/21.

A Assessoria de Assuntos Internacionais (AINTE), por meio do Despacho nº 97/2021/SEI/AINTE/GADIP/ANVISA, informou ter confirmado a autenticidade do documento Technical

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1995

report final RUS Final, o qual foi igualmente transmitido à AINTE após reiteração ao Ministério da Saúde da Federação Russa.

O referido Relatório Técnico descreve a análise realizada pelo Ministério da Saúde da Federação Russa para o registro da vacina Gam-COVID-Vac (marca registrada - Sputnik V), desenvolvido por N.F. Gamaleya National Research Center of Epidemiology and Microbiology.

Descrevo, a seguir, os principais aspectos do Relatório, especialmente no que se refere aos aspectos apontados pela Anvisa em deliberação anterior sobre os pedidos de importação da vacina Sputnik V.

O documento informa que o registro da vacina Gam-COVID-Vac foi realizado de acordo com os requisitos regulatórios adotados na Federação Russa, bem como de acordo com práticas internacionais. A prática regulatória da Federação Russa para o registro de vacinas cumpre integralmente os requisitos recomendados pela OMS e ICH, em particular as “Diretrizes sobre avaliação clínica de vacinas: expectativas regulatórias”.

Na Federação Russa, o Ministério da Indústria e Comércio é responsável pela emissão dos certificados de Boas Práticas de Fabricação (BPF). A inspeção da planta Generium pela comissão do Ministério da Indústria e Comércio foi realizada em 14 de agosto de 2020 e 9 de fevereiro de 2021. A inspeção do site Pharmstandart-UfaVita foi realizada em 26 de março de 2021 e a inspeção da unidade de produção de Medgamal foi realizada em 25 de maio de 2018 e 15 de março de 2021. Todas as inspeções foram concluídas sem comentários e confirmaram a possibilidade de liberação da vacina em cada um dos locais de produção designados.

A produção da vacina em um volume de biorreator de 5L e escalonamento adicional de produção usando biorreatores maiores, de até 1000L, foram acompanhados pelo controle de qualidade do produto acabado e de produtos intermediários, bem como um relatório de comparabilidade para a escala de 5L a 100L e um relatório separado para a escala de 100L a 1000L, de acordo com as regras do Ministério da Saúde da Federação Russa. O controle de produtos intermediários foi realizado de acordo com os pontos de controle da produção, o que foi confirmado pelo documento “Descrição de controle de etapas críticas da produção e de produtos intermediários", que está incluído no dossiê de registro. Todas as séries liberadas passaram no controle de qualidade no laboratório do Instituto Gamaleya e no laboratório estadual de Roszdravnadzor, Serviço Federal de Vigilância em Saúde, e mostraram conformidade com os parâmetros de qualidade especificados em todas as etapas de escalonamento do processo de produção para cada um dos sites produtivos.

Sobre as impurezas, o documento relata que o produto fabricado não contém impurezas comuns para vacinas vivas ou inativadas. As principais impurezas a serem controladas no medicamento incluem DNA residual e proteínas de células hospedeiras. Essas impurezas são controladas de acordo com as especificações de qualidade na etapa de controle em processo ou na etapa de produto acabado.

Quanto ao controle de qualidade, o Instituto Gamaleya apresentou especificações, controle de qualidade de intermediários na etapa de controle em processo e para liberação de controle de qualidade do produto acabado. As especificações e métodos de controle de qualidade foram baseados na Farmacopeia da Federação Russa ou em métodos de análise internos.

O duplo controle de qualidade realizado pelo Instituto Gamaleya e pelo Laboratório Roszdravnadzor não detectou qualquer RCA na vacina Sputnik V. O controle para RCA é realizado não apenas para o produto acabado, mas também em diferentes estágios de produção, incluindo a semente viral e concentrado da vacina. A ausência de RCA é confirmada por protocolos de controle de qualidade emitidos pelo Gamaleya e pelo Laboratório Roszdravnadzor.

Ainda de acordo com o relatório, as normas existentes para determinar as quantidades de RCA na vacina Sputnik V estão de acordo com as recomendações do FDA. Conforme os regulamentos da FDA existentes, de 33 RCA (com base em uma dose intratumoral de 1012 partículas) a 1000 RCA (com base em uma dose intravenosa máxima de 3x1013 partículas) podem entrar no corpo humano.

Sobre os estudos pré-clínicos, o documento informa que o perfil de segurança de várias vacinas baseadas em adenovírus recombinantes, desenvolvidas pelo Instituto Gamaleya, é comparável e

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1996

não difere significativamente entre as vacinas desenvolvidas e em relação a medicamentos semelhantes (de acordo com dados da literatura).

O programa de estudo incluiu estudos de atividade imunológica e segurança (toxicidade), incluindo avaliação de toxicidade para administração única e repetida, e para administração consecutiva do Componente I e do Componente II da vacina, avaliação da toxicidade reprodutiva e de desenvolvimento, imunogenicidade e alergenicidade.

Os estudos de toxicidade reprodutiva ainda estão em andamento. Os efeitos farmacocinéticos (biodistribuição) e farmacodinâmicos foram estudados.

Os resultados demonstraram, segundo o relatório, a não toxicidade da vacina em diferentes animais de laboratório em uma ampla gama de doses. O nível de segurança demonstrado por estudos pré-clínicos permitiu estudos clínicos em voluntários saudáveis.

A segurança, imunogenicidade e eficácia da vacina Gam-COVID-Vac foram avaliadas durante os estudos clínicos.

Os dados dos estudos de fases I e II confirmaram que a administração da vacina desenvolvida induz a formação de forte resposta imune ao vírus SARS-CoV-2 e envolve imunidade humoral e celular.

Para os estudos de fase I, tem-se as seguintes conclusões:

- Tanto uma imunização de dose única com o componente I ou II da vacina, quanto uma imunização de dose dupla, pode levar à formação de anticorpos IgG específicos em 100% dos voluntários no dia 21 após a imunização. No caso da dose dupla, os títulos máximos de anticorpos foram atingidos no dia 42 após o início da imunização;

- A imunização de dose dupla resultou em valores estatisticamente mais altos para os títulos de anticorpos IgG específicos em comparação com a imunização de dose única com o componente I ou II, que demonstra as vantagens da imunização de reforço e fornece a justificativa para recomendá-la para prática clínica futura;

- Quando os títulos de anticorpos IgG específicos foram comparados entre os voluntários vacinados no dia 28 após o início da vacinação com os títulos de anticorpos IgG em convalescentes após Covid-19, foi demonstrado que, no caso de uma administração de dose única, os títulos são comparáveis e, no caso de vacinação primária-reforço, os títulos dos voluntários vacinados excedem os títulos dos convalescentes;

- No soro sanguíneo de voluntários vacinados com ambos os componentes da vacina, no dia 28 após o início da vacinação, a taxa de soroconversão foi de 95%. No dia 42 após o início da vacinação, a taxa de soroconversão foi de 100%;

- Tanto a imunização de dose única com o componente I ou II quanto a imunização de dose dupla pode resultar no desenvolvimento de resposta mediada por células específica ao antígeno, o que foi confirmado pelo alto grau de confiabilidade estatística para os parâmetros medidos antes e após a imunização;

- Tanto a imunização de dose única quanto a imunização de dose dupla foram capazes de induzir linfócitos T CD4 + e CD8 +;

- Os resultados do estudo mostraram que a pré-imunidade aos componentes dos vetores da vacina não afeta a eficácia da vacinação;

- A análise de segurança sobre os resultados do estudo (até o dia 180 do período de observação) mostrou que a maioria dos eventos adversos (AEs) detectada foi leve e resultou em recuperação. Não foram registrados AEs graves.

Outros dois estudos de fases II e III da vacina Gam-COVID-Vac estão sendo realizados: “Um estudo clínico randomizado, duplo-cego, controlado por placebo, multicêntrico sobre a eficácia, imunogenicidade e segurança da vacina de vetor combinado Gam-COVID-Vac para ajudar a prevenir a infecção por coronavírus induzida pelo vírus SARS-CoV-2, de acordo com o protocolo nº 04-GamCOVID-

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1997

Vac-2020 em 40.000 voluntários acima de 18 anos" e "Um estudo aberto sobre a segurança, tolerabilidade e imunogenicidade do medicamento 'GamCOVID-Vac ', uma solução para injeção intramuscular, em voluntários saudáveis com mais de 60 anos de acordo com o protocolo nº 05-Gam-COVID-Vac-2020 em 110 voluntários".

As seguintes conclusões foram obtidas para o estudo 04-Gam-COVID-Vac-2020:

- A vacina em estudo tem um bom perfil de segurança, em particular, nenhuma reação alérgica grave induzida pela vacina foi registrada;

- O grupo de pacientes com mais de 60 anos não diferiu da população geral em termos do perfil de segurança;

- Não houve eventos adversos sérios inesperados relatados durante o estudo;

- 100% dos voluntários do grupo de vacinação com Sputnik V apresentaram resposta imune estável;

- A vacinação de reforço levou a uma morbidade estatisticamente menor no grupo de tratamento do que no grupo placebo;

- A eficácia observada para a vacina em estudo foi de 91,6%;

- A vacinação primária-reforço levou à uma severidade reduzida nos casos de doenças, com 100% de proteção contra casos graves de Covid-19;

- Idade, sexo e comorbidades não tiveram uma correlação estatisticamente significativa com o risco de infecção;

- Uma imunização de dose única com o Componente I mostrou uma diferença estatisticamente significativa em eficácia observada no período de 14 a 21 dias. De acordo com os dados obtidos, foi observada uma eficácia > 70% na redução do risco da doença do dia 14 ao dia 20 após o Componente I ter sido administrado. Consequentemente, uma imunização de componente único é capaz de reduzir significativamente o risco de doença, mesmo em um estágio inicial após a vacinação;

- Os dados obtidos parecem confirmar a hipótese do estudo de que a administração da vacina desenvolvida é segura e induz a formação de uma resposta imune protetora ao vírus SARS-CoV-2.

- A utilização de dois vetores diferentes com base nos sorotipos Ad26 e Ad5 de adenovírus humano em duas injeções separadas permite que a vacina forneça proteção mais eficaz contra o coronavírus, em comparação com as vacinas que usam o mesmo vetor para ambas as injeções, porque o sistema imunológico inicia mecanismos de proteção contra o produto após a segunda injeção. Usando dois vetores diferentes, a vacina Gam-COVID-Vac permite evitar possível efeito neutralizante e faz com que a resposta imune seja estável e durável;

- Até o momento da divulgação do relatório, 33.760 voluntários estavam randomizados para o estudo. Destes, 25.320 voluntários receberam a vacina e 8.440 voluntários receberam o placebo;

- Em comparação com outros protocolos, o estudo 04-Gam-COVID-Vac-2020 alcançou o seu objetivo em confirmar os resultados de eficácia e segurança da Sputnik V.

Para o estudo 05-Gam-COVID-Vac-2020, obtiveram-se as seguintes conclusões:

- Uma única imunização com o Componente I da vacina pode levar à formação de anticorpos IgG específicos em 53,2% dos voluntários com mais de 60 anos no 21º dia após a imunização;

- A imunização de voluntários com mais de 60 anos pode levar à formação de anticorpos IgG específicos em 98,1% dos voluntários no 28º dia após a imunização;

- Ao imunizar voluntários com mais de 60 anos de idade, os títulos de anticorpos continuaram a aumentar até 42 dias após a imunização (o que foi demonstrado para uma subpopulação de voluntários);

- A imunização dupla dos voluntários resultou na formação de linfócitos T CD4+ e CD8 + específicos no 28º dia após administração do Componente I da vacina. Os resultados indicaram a indução de imunidade celular como parte da imunidade nos voluntários após a imunização;

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1998

- A vacinação dupla pode levar ao desenvolvimento de imunidade mediada por células em voluntários com mais de 60 anos (com base nos dados de resposta linfoproliferativa e secreção de interferon gama), que foi confirmada por um alto grau de significância estatística dos parâmetros medidos antes e depois da imunização;

- A vacinação dupla pode causar a formação de linfócitos T CD4 + e T CD8 + específicos;

- A análise de segurança dos resultados do estudo mostrou que algum tipo de AE foi registrado em 17 voluntários (15,60%). Um SAE registrado (fibrilação atrial que exigiu hospitalização) foi considerado não relacionado à vacina em estudo;

- Nenhum EA grave foi registrado. A maioria dos AEs resultou em recuperação. Os EAs detectados durante o estudo são característicos da maioria das vacinas.

No que se refere ao uso pediátrico, estudos sobre a avaliação da segurança do uso da vacina em crianças não foram realizados. Nas instruções de uso para a vacina, a categoria de menores de 18 anos está incluída na seção "Contraindicações" (devido à falta de dados sobre a sua eficácia e segurança).

Sobre a imunização de mulheres grávidas, na data do relatório, a gravidez e a amamentação foram incluídas na lista de contraindicações para uso da vacina.

Sobre o uso em idosos, no momento, um estudo clínico está em andamento em 110 voluntários, “Um estudo aberto sobre a segurança, tolerabilidade e imunogenicidade do medicamento Gam-COVID-Vac, uma solução para uso por injeção intramuscular, em voluntários saudáveis com mais de 60 anos”. Foram realizadas alterações nas informações do paciente do texto de bula a fim de permitir o uso da vacina em pacientes idosos.

As seguintes condições foram definidas pelo Ministério da Saúde para autorização da vacina, de acordo com o regulamento do Governo da Rússia para situações de emergência:

a) imposição de restrições para seu uso seguro: a vacina pode ser usada apenas em organizações de saúde autorizadas a vacinar a população de acordo com o procedimento previsto na lei;

b) relatar cada fato do uso da vacina ao Serviço Federal de Vigilância em Saúde;

c) necessidade de realização de estudos clínicos pós-comercialização, cujos resultados servirão de base para avaliar a relação benefício / risco esperada da vacina ao confirmar seu registro;

d) a necessidade de testes de amostras de lote de qualidade da vacina de acordo com a legislação da Federação Russa.

O registro foi concedido de acordo com os requisitos regulamentares gerais adotados na Federação Russa, bem como de acordo com as práticas internacionalmente aceitas. A prática regulatória da Federação Russa para o registro de vacinas está em total conformidade com os requisitos recomendados pela OMS e ICH.

A Indicação Terapêutica Aprovada é: a vacina Gam-COVID-Vac é indicada para a imunização ativa de indivíduos ≥ 18 anos de idade para a prevenção de COVID-19.

A posologia aprovada é: o esquema de vacinação com a vacina Gam-COVID-Vac consiste em um esquema de duas doses de 0,5 mL cada. A segunda dose deve ser administrada 21 dias após a primeira dose.

O Ministério da Saúde da Federação Russa concedeu o registro, em uma base condicional, para a vacina Gam-COVID-Vac desenvolvida pelo Instituto Gamaleya.

Além dos aspectos técnicos constantes no relatório emitido pela autoridade Russa, foi possível verificar correspondência entre o conteúdo do referido documento com o constante em relatórios emitidos por outras autoridades sanitárias de referência, como os da OMS, FDA, Canadá e da própria Anvisa. Não apenas há um grau de concordância entre os itens constantes nos documentos, como em relação à profundidade da discussão sobre os documentos avaliados e que levaram à decisão pela Autoridade.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 1999

Ao avaliar o relatório, a Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS), por meio da Nota Técnica nº 80/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, informou que, no documento de aprovação do FDA de vacinas para Covid-19, também não há maiores detalhes sobre os resultados das inspeções, tais como compromissos, achados e medidas de mitigação adotadas, porém estas ficam descritas nos relatórios de inspeção. No caso do EMA, o documento de aprovação não indica os detalhes dos eventuais achados, compromissos e planos de mitigação adotados, que permanecem disponíveis integralmente nos relatórios de inspeção. Por sua vez, a autoridade Russa realizou inspeções nas empresas fabricantes da Sputnik V e possui os relatórios integrais em seus arquivos. No relatório de aprovação, também não há detalhes sobre os compromissos, achados e medidas de mitigação adotadas, sendo relatado que as inspeções foram concluídas sem nenhum comentário.

Importante distinguir que o relatório técnico apresentado visa cumprir os termos da Lei nº 14.124/21 e não superar as lacunas de informação para uma autorização de uso emergencial ou mesmo registro sanitário na Anvisa.

Portanto, trata-se de relatório autêntico, emitido pelo Ministério da Saúde da Rússia, o qual está contemplado entre as autoridades sanitárias definidas no caput do art. 16 da Lei nº 14.124/21 e que declara que a vacina Sputnik V foi aprovada seguindo os critérios adotados pela OMS e ICH.

Apesar das caraterísticas apontadas no documento, a Anvisa não pode, mesmo de posse do relatório exigido em lei, deixar de avaliar aspectos técnicos que vieram ao seu conhecimento e que subsidiaram a decisão anterior desta Diretoria Colegiada, já que a própria norma exige que a agência emita parecer sobre o processo de importação. Tal previsão, coloca a agência diante da obrigação de exercer sua própria missão institucional, também prevista em lei diversa, a Lei nº 9782, que é a de proteger a saúde da população.

Por isso, passarei, a seguir, a apresentar as considerações das áreas técnicas sobre o relatório e a vacina, delas retirando fundamentos para a minha decisão.

2.4 Das considerações das áreas técnicas da Anvisa

Trago aqui a síntese da Nota Técnica nº 66/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA, emitida pela Gerência Geral de Medicamentos e Produtos Biológicos (GGMED), a qual está consubstanciada na apresentação realizada pelo Gerente Geral de Medicamentos e Produtos Biológicos em relação ao relatório técnico emitido pelo Ministério da Saúde da Rússia e que contempla aspectos presentes no referido relatório em confronto com as manifestações técnicas anteriores.

A GGMED reforçou não se tratar de uma avaliação de qualidade, segurança e eficácia de dados da vacina, mas sim quanto aos dados avaliados até o momento e considerando o Relatório Técnico da Rússia.

Sobre os adenovírus replicantes, a área informou que, no relatório da autoridade russa, a especificação do teste de Segurança Específica, responsável por determinar a presença de adenovírus replicantes (RCA) no produto foi alterada de “Não mais que 1000 RCA por dose” para “Não mais que 50 RCA por dose”. O documento informa, ainda, que as normas que determinam a quantidade de adenovírus replicante na vacina Sputnik V estão em total concordância com as recomendações da US-FDA.

Apesar de o relatório fazer menção a recomendações do US-FDA de que 33 RCA a 1000 RCA poderiam ser injetadas no corpo humano, nenhuma referência foi fornecida para estes valores e não foi encontrado guia do US-FDA com tal recomendação. Portanto, não fica claro o racional utilizado pela autoridade russa para aprovar as especificações propostas para a vacina e como a segurança, de tais limites, foi determinada.

O relatório descreve que o produto foi desenvolvido com base em mais de 20 anos de experiência de trabalho com vetores adenovirais e que o desenvolvimento foi baseado em dados obtidos a partir de outras vacinas de adenovírus. No entanto, o relatório não aborda questões críticas do desenvolvimento, como: caracterização de parâmetros de qualidade, impacto das diferenças entre os processos produtivos; avaliação da comparabilidade, mudanças nas metodologias analíticas, mudanças nas especificações e seus respectivos limites, entre outros.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2000

No que se refere à comparabilidade no processo de fabricação, o relatório descreve superficialmente o processo de fabricação e menciona que o escalonamento de biorreatores de 5L até 1.000L foi acompanhado de controle de qualidade do produto acabado e de produtos intermediários. Também menciona a existência de relatório de comparabilidade entre os processos de 5L e 100L e um relatório separado para a escala de 100L e 1000L.

No entanto, o relatório não descreve os parâmetros e critérios utilizados para estabelecer a comparabilidade, não informa quais os lotes avaliados e se seriam da substância ativa, do produto acabado ou ambos e apresenta dados insuficientes de caracterização do produto quanto ao número de lotes, assim como quanto aos parâmetros avaliados pela autoridade Russa.

A GGMED também destacou que o relatório informa que o produto não contém impurezas comuns para vacinas vivas ou atenuadas e que as principais impurezas são controladas no produto, de acordo com as especificações de qualidade na etapa de controle em processo ou no produto acabado. Mas, o relatório não fornece informações sobre remoção ou controle de componentes utilizados no processo de fabricação, além de não apresentar uma avaliação de risco para estabelecer quais seriam os limites tolerados para as impurezas e não demonstrar a eficiência do processo em remover as impurezas.

O relatório da autoridade russa apresentou as especificações do produto acabado e informou a existência de controle de qualidade duplo (realizado pelo Gamaleya e pelo Laboratório Roszdravnadzor Federal Service for Surveillance in Healthcare).

As especificações e controles de qualidade foram baseados na Farmacopeia Russa ou em métodos analíticos internos e, de acordo com o relatório, os parâmetros de qualidade são confirmados por dados de estabilidade e dados de lotes de estudos pré-clínicos e clínicos do medicamento.

Entretanto, o relatório da autoridade russa não descreve se foram apresentadas validações para todas as metodologias internas e se estas estavam de acordo com guias reconhecidos internacionalmente, além de não ficar claro no relatório se testes críticos para determinar a atividade do produto não são realizados (infectividade e avaliação da expressão do transgene de forma direta).

Segundo a autoridade, o perfil de segurança de várias vacinas baseadas em adenovírus recombinantes, desenvolvidas pelo Gamaleya, é comparável. A GGMED informou que o relatório descreve estudos não clínicos conduzidos para avaliação de atividade imunológica e segurança (toxicidade). De acordo com o relatório, foram conduzidos estudos de toxicidade reprodutiva e de biodistribuição.

Não foram apresentadas descrições e análises sobre qual o grau de similaridade que as vacinas descritas em literatura possuem com a Sputnik V para justificar o perfil de segurança. As informações apresentadas sobre os estudos de segurança e toxicidade foram limitadas. Ademais, no relatório não são apresentados dados que demonstrem qual o perfil de biodistribuição e persistência in vivo das partículas virais da vacina Sputnik.

O relatório relata avaliações de quatro estudos clínicos conduzidos com a vacina Sputnik V:

- Estudo fase 1, 02-Gam-COVID-Vac-2020, um estudo aberto para avaliação de segurança, tolerabilidade e imunogenicidade da vacina Gam-COVID-Vac.

- Estudo fase 1, 03-Gam-COVID-Vac Lyo-2020, um estudo aberto para avaliação da segurança e imunogenicidade da vacina liofilizada.

- Estudo fase 2, 05-Gam-COVID-Vac-2020, um estudo aberto para avaliação da segurança, tolerabilidade e imunogenicidade ***em participantes com mais de 60 anos****.*

- Estudo fase 3, 04-Gam-COVID-Vac-2020, um estudo clínico randomizado, duplo-cego, controlado por placebo, multicêntrico em grupos paralelos para avaliação da eficácia, imunogenicidade e segurança da vacina de vetor combinada Gam-COVID-Vac na prevenção da infecção por coronavírus causada pelo vírus SARS-CoV-2.

De acordo com a GGMED, o relatório conclui que 100% dos voluntários do grupo de vacinação com Sputnik V apresentaram resposta imune estável. Também conclui que a vacina tem eficácia de 91,6% para casos sintomáticos e 100% para prevenção de casos graves. Por fim, conclui que a

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2001

vacina em estudo tem um bom perfil de segurança, em particular, sem reações alérgicas graves induzidas pela vacina.

Sobre a imunogenicidade clínica, apenas um subgrupo foi testado e não apresenta o tempo máximo de resultados disponíveis após o esquema de vacinação completo. Também não existe descrição sobre ensaios utilizados para avaliação de respostas imunes e como foram realizadas as validações desses ensaios e não há considerações sobre o poder estatístico aplicado para os resultados do estudo.

O relatório não apresentou a frequência das reações adversas relatadas (raras, incomuns, comuns, muito comuns e não descreveu a metodologia para obtenção dos dados de segurança. Quanto ao estudo de fase 3, estão ausentes informações sobre o desenho, padronização e avaliação dos desfechos de eficácia e segurança, condução do estudo e desvios de protocolo que ocorreram.

Por fim, a GGMED considera que, para atendimento à Lei 14.124/21, para proteção da saúde pública e cumprimento da missão da Anvisa, considerando-se as incertezas técnicas ainda presentes e o cenário da pandemia, a área recomenda a adoção de condicionantes na eventual autorização da importação excepcional, para fins de distribuição e uso em condições controladas pelos estados solicitantes da importação da vacina Sputnik V.

Dessa forma, apresento a seguir os condicionantes propostos pela área técnica:

- Distribuir e utilizar a vacina em condições controladas com condução de estudo de efetividade, com delineamento acordado com a Anvisa e executado conforme Boas Práticas Clínicas, conforme sugerido pelo Ofício CIDSNE/PRESID n. 25/2021 de 25/05/2021;

- Os lotes a serem destinados ao Brasil devem ser provenientes, das plantas produtivas inspecionadas pela Anvisa;

- Lotes importados devem ser aprovados pelo INCQS por meio de análise laboratorial que demonstre a ausência de adenovírus replicante, controle de agentes adventícios, a potência da vacina e também assegure a sua qualidade. É fundamental que sejam disponibilizados os Procedimentos Operacionais Padrão, materiais de referência, protocolos e insumos específicos;

- Contra-Indicação/Restrição de Uso: a vacina não deverá ser utilizada por pessoas com hipersensibilidade a qualquer dos componentes da fórmula, gravidez, lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos 12 meses, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia;

- Contra-Indicação/Restrição de Uso: não poderão receber essa vacina pessoas que tenham recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, que tenham se vacinado nas 4 semanas anteriores, tenham recebido imunoglobulinas ou hemoderivados 3 meses antes, tenham recebido tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, tenham recebido terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos;

- Os estados deverão disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português;

- Os estados deverão estabelecer as ações necessárias para evitar os erros de trocas entre os dois componentes da vacina, devendo haver monitorização e ações contínuas para minimizar o risco e os danos;

- Os estados deverão suspender a importação, distribuição e uso, caso a Anvisa ou a OMS reprovem o uso emergencial da vacina Sputnik V;

- Os estados deverão comunicar amplamente à sociedade que a vacina Sputnik V importada não possui avaliação da Anvisa quanto aos critérios de qualidade, eficácia e segurança.

Por sua vez, a Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS) emitiu a Nota Técnica nº 80/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, a qual também foi consubstanciada na apresentação realizada pela Gerente Geral da área e cujos aspectos principais abordarei a seguir.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2002

A GGFIS destacou que a análise atual teve por base o relatório técnico de aprovação emitido pela Autoridade Russa, o Ofício CIDSNE/PRESID nº 025/2021 enviado pelo Governador do Estado do Piauí e Presidente do Consórcio Nordeste, José Wellington Barroso de Araújo Dias em que apresenta proposições de contingência e Plano de Ação Declaratório.

O relatório técnico de aprovação emitido pela Autoridade Russa afirma que a atuação Regulatória Russa para o registro de vacina atende integralmente os requerimentos recomendados pela OMS e ICH e que o Ministério de Indústria e Comércio Russo é responsável pela emissão dos Certificados de Boas Práticas de Fabricação.

Relatam Inspeção nas plantas: Generium em 14 de Agosto de 2020 e em 09 Fevereiro de 2021; Pharmstandart-UfaVita em 26 de Março de 2021; Medgamal em 25 de Maio de 2018 e 15 Março de 2021, concluindo que as plantas estão autorizadas a fabricar a vacina em seus sites fabris.

Sobre as medidas de contingência propostas no Ofício CIDSNE/PRESID nº 025/2021 – Consórcio do Nordeste, "Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o Instituto Nacional de Controle de Qualidade em Saúde da Fundação Osvaldo Cruz – INCQS/Fiocruz." e "Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o Instituto Nacional de Controle de Qualidade em Saúde da Fundação Osvaldo Cruz – INCQS/Fiocruz.", a GGFIS relatou que, apesar de ser uma medida adicional de controle, ela sozinha não atende integralmente às necessidades identificadas pela área quando da inspeção sanitária (validação da filtração esterilizante) realizada nas empresas fabricantes da vacina, no caso a Generium S.A. e Pharmstandard UfaVita. A garantia da esterilidade é uma abordagem holística.

A área também relatou os achados da inspeção realizada pela Anvisa, por equipe composta por 5 inspetores que realizaram inspeção in loco no período de 19 a 23 de Abril de 2021 nas seguintes plantas: Generium e Pharmstandart-UfaVita, identificando Não Conformidades Críticas com impacto no produto acabado.

Nesse cenário, a GGFIS propôs a adoção de ações de mitigação de risco e condicionantes referentes aos achados de inspeção não abordados no Relatório de Técnico da Autoridade Russa para atendimento aos Guias da OMS (WHO good manufacturing practices for biological products e WHO good manufacturing practices for sterile pharmaceutical products):

- Adequação das práticas asséptica para garantir a esterilidade do produto e atendimento do item 7.2 do guia da OMS. A comprovação de adequação pode ser enviada à Anvisa ou Autoridade Russa (declaração de cumprimento);

- Apresentação da conclusão da validação da filtração esterilizante, como um dos componentes do sistema de garantia da esterilidade do Produto, item 5.4 do Guia da OMS ou medida adicional de mitigação de risco;

- Conclusão da Validação de Processo do IFA para atendimento do item 15.1 do Guia da OMS. A comprovação pode ser enviada à Anvisa ou Autoridade Russa (declaração de cumprimento);

- Apresentação do relatório de validação da metodologia analítica de controle de qualidade juntamente à documentação a ser enviada ao INCQS.

Como conclusão, a área informa que a Autoridade Sanitária Russa declara que "segue os requisitos da OMS e ICH" e que "as empresas foram inspecionadas sem observações e confirmaram a possibilidade de liberação da vacina pelas plantas fabris" ao encontro do requisito legal de que os produtos importados devem ter qualidade, segurança e eficácia atestadas por meio da comprovação do registro pelas autoridades sanitárias internacionais definidas na Lei 14.124/2021.

As plantas fabris foram também inspecionadas pela Anvisa com observações confirmando a necessidade de correções para o adequado atendimento aos padrões de qualidade da OMS ou do PIC/S e, neste momento, não é possível concluir pelo atendimento pleno dos requisitos de qualidade preconizados pela OMS. Dessa forma, apresentou sugestões de medidas condicionantes de mitigação de risco que poderiam ser aplicadas no contexto de uma importação excepcional em condições controladas,

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2003

considerando o cenário pandêmico no Brasil, onde se verifica escassez de vacinas e insumos; as projeções de evolução da pandemia e a capacidade do sistema de saúde brasileiro.

A Gerência Geral de Monitoramento de Produtos Sujeitos à Vigilância Sanitária (GGMON) emitiu o Despacho nº 77/2021/SEI/GFARM/GGMON/DIRE5/ANVISA, no qual tece as seguintes considerações:

Item 11: Conforme informado no documento, o produto está em uso em 40 países, porém dados de monitoramento pós-vacinação são escassos e indicam fragilidades no processo de farmacovigilância estabelecidos tanto pelo detentor de registro, visto que não foram apresentados dados do uso como resposta ao questionamento levantado. Dados do 10° *Informe de vigilancia de seguridad en vacunas* publicado em 2 de abril de 2021 pelo Ministério da Saúde da Argentina, apontam que a taxa de eventos adversos por 100.000 vacinados é maior para Sputnik V do que de outras vacinas usadas naquele país. Reforça-se que a relação dos países que estão vacinando com Sputnik V sem apresentação dos dados de monitoramento da segurança da vacina nos países listados, não agrega informação para análise pela Gerência Farmacovigilância.

Item 15: no documento russo consta que erros programáticos de trocas entre os dois componentes da vacina não ocorreram na Rússia. A área salienta que a própria organização Mundial de Saúde inclui os erros de vacinação como eventos adversos a serem monitorados pela farmacovigilância dos países signatários, visto que erros ocorrem em todo o mundo. A Argentina afirma, no *10° Informe de vigilancia de seguridad en vacunas* publicado em 2 de abril de 2021 pelo Ministério da Saúde argentino, que os erros programáticos de trocas entre os dois componentes da vacina Sputnik V estavam entre os principais erros naquele país. Os erros ocorrem e devem ser monitorados. O fato de poder acontecer erros não coloca em cheque a segurança do produto, mas deve haver monitorização e ações contínuas para minimizar o risco e os danos.

Item 30: o documento analisado informa que foram apresentados dados de mundo real sobre a vacina Sputnik V. Não foram apresentados, entretanto, dados consistentes de monitoramento da segurança da vacina nos países que utilizam o produto.

A GGMON também se manifestou sobre os aspectos de farmacovigilância e de monitoramento que poderiam ser utilizados para o acompanhamento do uso da vacina no Brasil por meio da Nota Técnica nº 22/2021/SEI/GFARM/GGMON/DIRE5/ANVISA. A área informa que, diante dos dados limitados de pós-mercado sobre a segurança e a efetividade da vacina Sputnik V, recomenda-se fortemente que sejam adotados integralmente os seguintes mecanismos de monitoramento e prevenção de eventos adversos pós-vacinais:

- Bula e orientações de uso, transporte e condições de armazenamento disponibilizadas em idioma português aos profissionais;

- Adoção de monitorização intensiva: os vacinados devem ser monitorados para verificação de desfechos de segurança e efetividade, tais como eventos adversos pós-vacinais, infecção pelo Sars-Cov-2 (incluindo análise de variante do coronavírus), internação por Covid-19, óbito por Covid-19 após a primeira e segunda doses. Deverão ser adotados mecanismos pela coordenação de imunizações, e por instituição independe com reconhecido saber, para rastreabilidade de vacinados e das vacinas aplicadas, incluindo o lote da vacina que foi aplicada em cada um deles, da primeira e da segunda doses, bem como avaliação e reporte dos resultados;

- Notificação de eventos adversos: os eventos adversos graves devem ser comunicados à Anvisa em até 72 horas por meio do sistema VigiMed. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

- Emissão de relatório de avaliação benefício-risco da vacina: o importador deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados de segurança e efetividade (desfechos supramencionados) de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2004

- Monitorização de alertas sanitários internacionais: caberá ao importador acompanhar diariamente alertas internacionais de segurança da vacina Sputnik V emitidos pelos países que estão utilizando a vacina;

- Comunicação de alertas de segurança: a Anvisa deverá ser comunicada imediatamente de alertas de segurança emitidos por outras autorizadas sanitárias internacionais.

Por fim, a GGMON concluiu que, em caso de autorizada de forma excepcional e temporária, recomenda-se fortemente que as medidas de farmacovigilância mencionadas sejam integralmente adotadas pelos importadores, a fim de possibilitar o adequado monitoramento dos vacinados e a celeridade de medidas sanitárias que visem a segurança dos brasileiros.

A Gerência de Laboratórios de Saúde Pública (GELAS), por meio da Nota Técnica nº 26/2021/SEI/GELAS/DIRE4/ANVISA, ressalta que a RDC nº 476/2021 determina, dentre outros requisitos, que os lotes das vacinas importadas somente poderão ser destinadas ao uso após liberação pelo Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da RDC nº 73/2008.

Por sua vez, a RDC nº 73/2008 determina que, imediatamente após internalização da carga no país, deve ser protocolado no INCQS (pelo detentor do registro ou importador) a seguinte documentação constante no Anexo II para avaliação pelo INCQS de forma a subsidiar a liberação dos lotes de vacinas:

"ANEXO II

PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE - Informações Gerais 1. Informações dos Ingredientes Biologicamente Ativos, Excipientes e Produtos Terminados (apresentação, composição, numero de doses produzidas, número de lote, rastreabilidade do produto deste o lote semente até o produto terminado, dentre outras pertinentes) e suas especificações e controles.

2. Todas as etapas dos processos de produção (tais como: cultivo, purificação, inativação e, etc.) e seus respectivos controles de qualidade, além do controle de qualidade do ingrediente biologicamente ativo e do produto terminado (lote final), bem como as especificações de liberação do fabricante, com base nas informações presentes no registro sanitário.

3. Extrato SISCOMEX comprovando a liberação de Importação dos lotes de produto pela ANVISA.

4. Certificado de Liberação do Lote pela Autoridade Sanitária do País de origem."

No entanto, cientes da relevância e urgência do interesse público na disponibilização de lotes de vacina contra a Covid-19, e considerando a competência regimental da GELAS em coordenar as ações de vigilância sanitária realizadas pelos laboratórios que compõem a Rede Nacional de Laboratórios de Vigilância Sanitária, a área informou que tem realizado reuniões entre as empresas detentoras/importadoras das vacinas e o INCQS e solicitado o envio ao INCQS, no tempo mais breve possível, da documentação referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE DE QUALIDADE (PRPCQ) e, se possível, do estudo de estabilidade da vacina, de forma a adiantar a análise, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades.

Por fim, a GELAS informou que, caso as importações sejam aprovadas, a Anvisa encaminhará ofício às Secretarias de Saúde dos Estados de forma a promover o envio imediato da documentação técnica pelo importador ao INCQS. Destacou, ainda, a necessidade do envio pelo importador, no tempo mais breve possível, da documentação, por meio eletrônico ao INCQS, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades. Para tanto, o INCQS designou dois pontos focais, que estão dentre os responsáveis pelas análises: Maria Aparecida Affonso Boller e Ozeias Leitão, para o envio dos documentos em formato eletrônico (incqs.ntpb@fiocruz.br) e para eventuais esclarecimentos.

A GGMON também se manifestou em relação ao Ofício CIDSNE/PRESID nº 025/2021, enviado pelo Consórcio Nordeste, por meio do Despacho nº 102/2021/SEI/GFARM/GGMON/DIRE5/ANVISA. A área entende que, além das medidas de monitoramento sugeridas pelo Consórcio, faz-se necessária a apresentação do mapa de distribuição de

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2005

cada lote aprovado pelo laboratório oficial. Desta forma, a GGMON compreende que houve o compromisso do Consórcio com as medidas de Farmacovigilância sugeridas pela área técnica. Ainda, sugeriu que haja compromisso do importador em estimular o registro imediato de eventos adversos por parte de profissionais de saúde e cidadãos.

Por fim, a GGMON destacou que o sistema e-SUS Notifica do Ministério da Saúde apresenta elevada sensibilidade para a detecção de eventos adversos pós vacinais, enquanto o sistema VigiMed da Anvisa é mais específico, o que possibilita a atuação sanitária oportuna.

A partir de todo o exposto pelas áreas técnicas desta Agência, minha avaliação será conduzida a fim de considerar todas as observações apontadas e respectivas medidas mitigatórias necessárias. Ademais, acrescentarei à minha análise aspectos de saúde pública que apresentarei adiante.

2.5 Do cenário internacional

A vacina possui registro e/ou autorização de uso emergencial concedido por três das autoridades sanitárias listadas no caput do art. 16 da Lei: Ministry of Health of the Russian Federation, da Federação da Rússia; Central Drugs Standard Control Organization (CDSCO), da República da Índia; e Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT), da República Argentina.

A vacina Sputnik V está autorizada em 68 países, os quais, em sua maioria, se tratam de países sem tradição de maturidade e robustez regulatórias.

A fim de obter informações sobre o uso da vacina em outros países, a assessoria internacional da Agência enviou o Ofício nº 54/2021/SEI/AINTE/GADIP/ANVISA ao Ministério das Relações Exteriores (MRE). Como resposta, foi recebido o Ofício nº 09116.000921/2021-82 do MRE com as atualizações quanto ao status internacional de imunização com a Sputnik V.

Percebe-se que o cenário global sobre a utilização da Sputnik V não alterou significativamente, desde a última deliberação da Anvisa. Destaco o reporte da autoridade sanitária da Índia, CDSCO; a entidade informou que a segurança, eficácia, imunogenicidade e reatogenicidade da vacina foram avaliados pelo CDSCO juntamente com o comitê de especialistas. O CDSCO avaliou os dados de estudos clínicos submetidos pelo solicitante, incluindo os dados publicados no “The Lancet” e estudos ponte de fase II e fase III conduzidos na Índia com 1.600 participantes. Os dados interinos de segurança e imunogenicidade do dia 42 foram comparáveis com os dados gerados no estudo clínico na Rússia. Com base nos dados submetidos, a autorização para uso restrito em situação de emergência foi concedida.

Na Sérvia, os dados de vacinação com a Sputnik V demonstraram um perfil de segurança elevado, sem registro de eventos adversos sérios, sem relatos de mortes relacionadas à vacinação e sem casos de trombose venosa cerebral observados.

Um outro estudo conduzido pela Universidade Nacional de Córdoba na Argentina (https://static.poder360.com.br/2021/05/Estudo-Argentina.pdf) mostrou uma boa resposta na produção de anticorpos IgG contra SARS-CoV-2 na coorte de 285 pessoas imunizadas com a vacina Sputnik V. No dia 14, após a primeira dose da vacina, 85,5% da coorte apresentava anticorpos contra o vírus e no dia 42, após receber a segunda dose, 99,65% apresentavam anticorpos.

Os resultados demonstram a importância de se administrar a segunda dose da vacina para aqueles que não tiveram exposição prévia ao vírus, visto que não apenas a proporção de indivíduos com anticorpos IgG anti S total é maior, mas também o título de anticorpos neutralizantes (AcNT) aumenta significativamente neste grupo no dia 42 pós-vacinação.

O estudo também demonstrou que a vacina Sputnik V tem eficácia de proteção contra a variante P.1 do coronavírus a partir da análise de plasma de 157 pessoas (entre as quais há amostras de indivíduos recuperados de infecção natural por SARS-CoV-2 cepa de tipo selvagem B.1 e de pessoas vacinadas com Sputnik V que tiveram ou não exposição anterior ao vírus). Em todas as categorias avaliadas, observou-se neutralização da variante P.1.

Por fim, destaco ainda que a Anvisa recebeu documento com posicionamento da Comissão Nacional de Segurança em Vacinas (CoNaSeVa) sobre a segurança de vacinas contra a Covid-19. O

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2006

documento informa que, desde o início da Campanha Nacional de Vacinação contra a Covid-19 na Argentina, foram notificados, até 9 de abril de 2021, ao Sistema Integrado de Informação em Saúde da Argentina (SIISA), 29.232 eventos supostamente atribuíveis à vacinação e imunização (ESAVI) após a aplicação de 5.493.153 doses das vacinas: Sputnik V 3.414.158 (62%); Covishield 587.816 (10%), Sinopharm 1.295.940 (23,5%) e Oxford University / AstraZeneca 195.239 (3,5%).

O documento reporta que, dos eventos relatados, 99,05% (28.952) foram leves e moderados e 280 (0,95%) foram hospitalizados para avaliação. A vacinação com a Sputnik V foi a primeira a ser implantada na Argentina, dando início à Campanha Nacional em 29 de dezembro de 2020 e é o imunizante mais utilizado até hoje. Houve 25.426 eventos relacionados à vacina Sputnik V (taxa = 744 / 100.000 doses) que consistiam em: febre, dor de cabeça, mialgia, artralgia, reações locais, diarreia, vômito, náusea e alergia. Anafilaxia (0,02%) foi registrada em pessoas com histórico de alergia grave que não tenha sido referido no ato da vacinação. Embora a taxa de eventos após a aplicação da vacina Sputnik V seja alta, a maioria dos eventos foi leve ou moderado e ocorreu nas primeiras 72 horas da aplicação da vacina com recuperação integral, o que representa um perfil de segurança adequado para seu uso.

3. DA IMPORTAÇÃO DA VACINA COVAXIN

3.1 Relatório

Analisa-se o pedido de autorização para importação excepcional da vacina Covaxin, nos termos da Lei nº 14.124, de 10 de março de 2021, pelo Ministério da Saúde.

O pedido excepcional de importação está ancorado no Contrato 29/2021 celebrado entre o Ministério da Saúde (MS) e a empresa BHARAT BIOTECH LIMITED INTERNATIONAL, representada pela empresa PRECISA COMERCIALIZAÇÃO DE MEDICAMENTOS LTDA, CNPJ: 03.394.819/0005-00, para aquisição de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN/BBV152, divididas em 05 (cinco) parcelas de 4.000.000 (quatro milhões) cada.

Conforme disposto no Ofício nº 129/2021/DLOG/SE/MS, a vacina fabricada pela BHARAT BIOTECH INTERNATIONAL LIMITED (BBIL), localizada na Índia, não possui registro sanitário junto a Agência Nacional de Vigilância Sanitária (ANVISA) e o pedido está apoiado na autorização de uso emergencial concedida pela Autoridade Sanitária da Índia.

O pleito ora em análise foi recebido no Sistema Eletrônico de Informações (SEI) da Anvisa no dia 24/05/2021. Aqui cabe destacar que a Anvisa já deliberou sobre pedido anterior do Ministério da Saúde para importação excepcional da vacina Covaxin, por ocasião da Reunião Extraordinária Pública – RExtra 5/2021, realizada no dia 31/3/2021. Na oportunidade, a Diretoria Colegiada decidiu, por unanimidade, negar a autorização excepcional e temporária para importação e distribuição da vacina COVAXIN/BBV152, solicitada pelo Ministério da Saúde, nos termos do voto do relator.

Ao avaliar o pleito anterior de importação da vacina Covaxin pelo Ministério da Saúde, diante da ausência do relatório técnico de avaliação emitido pela autoridade sanitária da Índia, a Anvisa precisou prospectar informações para subsidiar sua deliberação. Nesse sentido, a análise foi baseada nas informações provenientes de processos em curso na Agência, como os pedidos de certificação de Boas Práticas de Fabricação e de condução de estudos clínicos no Brasil. Todos esses dados foram levados em consideração para que a Anvisa pudesse emitir o parecer preconizado pela Lei nº 14.124/21.

Dessa forma, a Anvisa precisou considerar para sua decisão o fato de ter tido acesso à documentação técnica apresentada para análise do Dossiê de Desenvolvimento Clínico do Medicamento (DDCM), protocolado pela empresa Precisa, e a realização de inspeção de registro *in loco* na empresa Bharat Biotech, fabricante da vacina em sua totalidade (substância ativa e produto terminado).

A partir da análise dos dados de qualidade, segurança e eficácia constantes no DDCM, não foi possível, naquele momento, concluir quanto ao perfil de benefício-risco da vacina.

Sobre o cumprimento das Boas Práticas de Fabricação, a empresa fabricante Bharat Biotech International Limited, Índia, foi inspecionada pela Anvisa de 01/03/2021 a 05/03/2021 para a fabricação da Vacina Covaxin (vacina inativada e adsorvida contra SARS-CoV-2). Durante a inspeção, foram constatadas não conformidades e as medidas adotadas pela empresa até aquele momento não

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2007

foram suficientes para mitigar os riscos associados às não conformidades apontadas na inspeção. Dessa forma, foi publicado o indeferimento do pedido de Certificação de Boas Práticas de Fabricação de Medicamentos da empresa fabricante Bharat Biotech, conforme Resolução RE nº 1.297, de 29 de março de 2021.

Diante dos fatos expostos, nos termos do Voto nº 99/2021/SEI/DIRE5/ANVISA, a Diretoria Colegiada da Anvisa decidiu, por unanimidade, negar a autorização excepcional e temporária para importação e distribuição da vacina COVAXIN/BBV152, solicitada pelo Ministério da Saúde, no dia 31/03.

Portanto, a decisão anterior foi tecida a partir da análise da documentação do DDCM e do resultado da inspeção de Boas Práticas de Fabricação (BPF) no fabricante da vacina.

Para o presente processo administrativo, foram apresentados os seguintes documentos:

- Ofício contendo solicitação de autorização excepcional para importação de 20.000.000 (vinte milhões) de doses da vacina Covaxin;

- Declaração atestando tratar-se de importação de vacina contra Covid-19 nos termos da Lei 14.124/21 e RDC/ANVISA 476, de 10 de março de 2021 artigo 12 inciso I;

- Comprovação da autorização de uso emergencial da vacina emitida pela autoridade sanitária da Índia;

- Declaração atestando a adoção das estratégias de monitoramento e cumprimento das diretrizes de Farmacovigilância nos termos da RDC/ANVISA 476, de 10 de março de 2021, artigo 12 inciso III e Anexo;

- Comprovação da autorização de uso emergencial da vacina emitida pela autoridade sanitária do México, Cofepris;

- Comprovação do peticionamento do pedido de certificação de Boas Práticas de Fabricação (BPF) referente ao fabricante do insumo farmacêutico ativo (IFA);

- Comprovação do peticionamento do pedido de certificação de Boas Práticas de Fabricação (BPF) referente ao produto acabado;

- Relatório referente ao Plano de Ações corretivas e preventivas necessárias à adequação às Boas Práticas de Fabricação (CAPA);

- Segundo relatório interino referente ao estudo clínico de fase III;

- Declaração da empresa Precisa Medicamentos atestando que todas as doses a serem enviadas ao Brasil estarão em concordância com todas as ações aplicadas ao relatório CAPA, sendo todas produzidas após 15 de abril de 2021 e com validade em acordo com produção, promovendo tempo razoável para aplicação pelo programa PNI do Ministério da Saúde;

- Documentação técnica requerida pelo Guia nº 42/2020.

* * *

Depreende-se que, dos documentos apresentados no novo pedido de importação, não consta o relatório técnico da vacina preconizado pela Lei nº 14.124/21 e pela RDC nº 476/21, da Anvisa.

No entanto, um conjunto robusto de documentos foram apresentados à agência, como contrapartida da ausência do relatório técnico da vacina. Por sua vez, o desenvolvedor realizou sucessivas reuniões de trabalho com as áreas técnicas da Anvisa a fim de tentar sanar as lacunas provenientes da inexistência de tal relatório.

Nesse sentido, o nosso exame inicial se volta a identificar em que medida as lacunas de informação relatadas por mim no dia 31/03 foram superadas. Para melhor compreensão desse caminho, considero ser importante, de forma bastante geral e resumida, apresentar quais os aspectos novos apresentados pelo desenvolvedor da vacina.

Após a decisão da Agência, o Ministério da Saúde e a empresa Precisa Medicamentos permaneceram em tratativas com a Anvisa, realizando reuniões com as Diretorias e áreas técnicas, a fim de superar os motivos que levaram à não anuência da importação no pedido anterior.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2008

Com a Quinta Diretoria, foram realizadas duas reuniões institucionais nos dias 09/04 e 15/04 e três reuniões de pré-submissão, nos dias 16/04, 19/05 e 24/05. Nessas reuniões, tanto aspectos da instrução do processo para autorização de importação, como documentos técnicos novos foram extensivamente debatidos, numa demonstração de boa fé e de esforço técnico do requerente, buscando as adequações necessárias para uma nova submissão.

Ademais, as seguintes reuniões foram realizadas com outras áreas da Anvisa: 07/04/2021 – Reunião ANVISA (DIRE5 e DIRE4) – Pauta: Autorização Excepcional; 19/04/2021 – Reunião GGFIS – Pauta: Nova proposta de CBPF; 29/04/2021 – Reunião GGMED – Pauta: DDCM e DEEC; e 30/04/2021 – Reunião ANVISA – Autorização Excepcional.

Após as discussões nas referidas reuniões e diante da ausência do relatório técnico de avaliação emitido pela autoridade sanitária da Índia, a empresa submeteu, por meio dos expedientes nºs 1214929212 e 1219797211 (DDCM) e 1809912212, 1812880217 e 181255429 (Submissão Contínua), a documentação técnica requerida pelo Guia nº 42/2020, que dispõe sobre os requisitos mínimos para submissão de solicitação de autorização temporária de uso emergencial, em caráter experimental, de vacinas Covid-19. A empresa submeteu, também, novos protocolos para certificação de Boas Práticas de Fabricação: para a linha de produtos estéreis, efetuado por meio do expediente nº 1998936/21-0 em 24/05/21, e para o insumo farmacêutico ativo (IFA), efetuado por meio do expediente nº 2014094/21-7 em 25/05/21.

Portanto, no que se refere à certificação de Boas Práticas de Fabricação (CBPF), a empresa realizou as adequações necessárias, as quais culminaram nos novos pedidos de certificação, conforme será descrito adiante.

Ademais, as adequações promovidas pela empresa em relação ao pedido de condução de estudo clínico no Brasil resultaram na anuência do Dossiê de Desenvolvimento Clínico de Medicamento (DDCM) e na anuência em Processo de Pesquisa Clínica de ORPC's para a vacina BBV152, as quais foram publicadas pela Anvisa por meio da Resolução RE nº 1.938, de 13 de maio de 2021. Dessa forma, será possível a Anvisa acompanhar de forma bastante próxima o uso da vacina no Brasil no âmbito do estudo clínico, adotando as medidas sanitárias cabíveis caso necessário.

A solicitação do estudo clínico foi realizada pela empresa Precisa Farmacêutica. A fabricante da vacina é o laboratório Bharat Biotech. O estudo autorizado é de fase 3, randomizado, duplo-cego, controlado por placebo, multicêntrico, para avaliar a eficácia, a segurança, a imunogenicidade e a consistência entre lotes de BBV152, uma vacina de vírion inteiro inativado contra Sars-CoV-2, em adultos com idade igual ou superior a 18 anos de idade.

Ficará a cargo da Sociedade Beneficente Israelita Brasileira Hospital Albert Einstein a responsabilidade por conduzir o estudo clínico no Brasil.

O estudo prevê a aplicação de duas doses, com 28 dias de intervalo. A previsão é de que 4.500 voluntários sejam envolvidos no Brasil, em oito centros de ensaio clínico, incluindo 625 participantes do próprio centro do Hospital Albert Einstein.

Para esta autorização, a área técnica analisou os dados das etapas anteriores de desenvolvimento da vacina, incluindo estudos não clínicos in vitro e em animais, bem como dados preliminares de estudos clínicos em andamento. Os resultados obtidos até o momento demonstraram um perfil de segurança aceitável da vacina.

Também cabe destacar que a empresa já iniciou as tratativas junto ao Instituto Nacional de Controle de Qualidade em Saúde (INCQS) a fim de apresentar toda a documentação requerida pela RDC nº 73/2008 para liberação dos lotes da vacina a serem utilizados no Brasil.

Portanto, pode-se concluir que a desenvolvedora acatou de forma substancial as recomendações e orientações da Anvisa, além de demonstrar avanços de forma ativa durante as tratativas com a Agência.

Diante, contudo, da inexistência de relatório técnico emitido pela autoridade estrangeiro, remanescem aspectos a serem considerados nesta avaliação.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2009

Como já antecipei no caso da Sputnik, as incertezas ainda existentes nesta avaliação devem ser sopesadas a partir de outras variáveis, em especial o cenário sanitário e epidemiológico do país na atualidade.

3.2 Da vacina Covaxin

A vacina Covaxin foi desenvolvida pela empresa farmacêutica indiana Bharat Biotech em colaboração com o Conselho Indiano de Pesquisa Médica, um instituto de pesquisa biomédica financiado pelo governo, e sua subsidiária, o Instituto Nacional de Virologia.

A Bharat Biotech produz outras 14 vacinas, incluindo para rotavírus, hepatite B, zika vírus e Chikungunya. Quatro das vacinas fabricadas pela empresa (vacina contra poliomielite oral trivalente, vacina contra poliomielite oral bivalente, vacina rotavírus e vacina contra febre tifóide) são pré-qualificadas pela Organização Mundial da Saúde (OMS).

A Covaxin foi aprovada pela primeira vez em 12 de janeiro de 2021 para uso restrito em emergência no modo ensaio clínico. Posteriormente, o modo de ensaio clínico foi dispensado em 11 de março de 2021 e a Covaxin foi aprovada para "uso restrito em situação de emergência de interesse público".

A plataforma de vacina de vírus inteiro inativada **é a plataforma de fabricação mais bem estabelecida para a produção de vacinas**. A Covaxin utiliza essa plataforma clássica para produzir imunidade contra a Covid-19, a partir de partícula viral do SARS-CoV-2 infecciosa completa que consiste em RNA envolto por uma casca de proteína, mas modificada para que não possa se replicar. Isso significa que o coronavírus é “morto”, removendo dele sua capacidade de se replicar no corpo, mas ainda é reconhecido pelo organismo, que pode criar defesas em uma situação segura e preparar-se contra uma infecção real.

A Covaxin se apresenta como um líquido translúcido branco livre de material particulado contendo 6 mcg de Antígeno do Coronavírus Inativado (cepa NIV-2020-770).

A vacina Covaxin é indicada para a imunização ativa para prevenir a COVID-19 causada pelo vírus SARS-CoV-2, em indivíduos com 18 anos ou mais. O uso da vacina deve estar de acordo com as recomendações oficiais.

A vacina deve ser administrada em duas doses no Dia 0 e Dia 28 por via de administração intramuscular (IM).

As contraindicações consistem em: hipersensibilidade a qualquer um dos constituintes da vacina; mães grávidas e lactantes; durante a febre ou infecção grave; e indivíduos menores de 18 anos.

Por sua vez, as seguintes advertências e precauções especiais de utilização devem ser observadas: não administrar por via intravenosa, intradérmica ou subcutânea; como todas as outras vacinas, supervisão e tratamento médico apropriado devem estar sempre disponíveis para tratar quaisquer reações anafiláticas após a imunização; e o vacinado deve permanecer sob supervisão médica por pelo menos 30 minutos após a vacinação.

Antes do uso, a vacina deve ser bem agitada para se obter uma suspensão translúcida esbranquiçada e uniforme. O frasco deve ser verificado visualmente quanto à presença de partículas ou outra coloração, se houver, antes de sua administração.

A vacina deve ser armazenada de 2-8ºC e não deve ser congelada. O prazo de validade da vacina é de 6 meses a partir da data de fabricação.

A vacina pode ser apresentada como dose única (0,5 mL) ou como multidose (5 mL e 10 mL). Após abertura do frasco, a vacina deve ser utilizada o quanto antes e dentro de, no máximo, 6 horas quando armazenada de 2-8ºC.

3.3 Das considerações das áreas técnicas da Anvisa

A Gerência Geral de Medicamentos e Produtos Biológicos (GGMED) se manifestou por meio da Nota Técnica nº 62/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA, na qual informou que não há estudo de fase 3 concluído para a referida vacina. Foram apresentados para a Anvisa, nos dois processos

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2010

de solicitação de importação excepcional pelo Ministério da Saúde, relatórios interinos de estudo de fase 3 conduzido na Índia, referentes a duas análises interinas, que ainda não permitem a conclusão de forma definitiva sobre a eficácia e segurança da vacina sob a perspectiva daquela gerência. Também existem estudos clínicos de fases 1 e 2 concluídos, cujos resultados foram publicados.

Informou que a documentação apresentada inclui documento emitido pela Organização Central de Controle de Padrões de Medicamentos/ Diretoria-Geral de Serviços de Saúde do governo da Índia, referente à permissão para fabricar Vacina SARS-CoV-2 Inativada com Vírion Inteiro (BBV152) para uso restrito em situação de emergência, com descrição de aprovação inicial em 03/01/2021 e alterações da permissão em 11/03/2021. Foi também apresentada documentação emitida pela Comissão Federal de Proteção contra Riscos Sanitários, COFEPRIS, do governo do México, de 06/04/2021, referente à autorização emergencial provisória da vacina Covaxin.

A GGMED informou que houve solicitação de realização de ensaio clínico por meio da submissão do DDCM (processo: 25351.259546/2021-59) protocolizado em 30/03/2021 pela empresa Precisa Comercialização de Medicamento LTDA. O DDCM foi anuído, conforme publicação no DOU nº, 89-A, RE nº 1.938, de 13/05/2021. Porém, para inicialização do estudo, foi emitido um Termo de Compromisso (enviado à empresa por meio do ofício: 1853158210).

O estudo clínico a ser realizado no Brasil é uma continuidade do estudo da Índia. Trata-se de um estudo clínico Fase 3, denominado “Estudo orientado por eventos, de fase 3, randomizado, duplo-cego, controlado por placebo, multicêntrico, para avaliar a eficácia, segurança, imunogenicidade e consistência entre lotes de BBV152, uma vacina de vírion inteiro inativado contra SARS-CoV-2, em adultos ≥18 anos de idade”. O estudo tem como objetivo primário avaliar a eficácia de BBV152B versus placebo para prevenir COVID-19 sintomática. O desfecho será por meio da primeira ocorrência de casos de COVID-19 sintomática confirmados virologicamente (RT-PCR positivo). No dia 20/05/2021, foi realizada reunião com a empresa para discussão das condicionantes do Termo de Compromisso relacionadas à parte clínica. De acordo com a empresa, seria realizada a revisão de casos graves e assintomáticos tanto no Brasil quanto na Índia, de modo a categorizá-los também pelos critérios OMS e FDA, com uma posterior análise de sensibilidade.

Não houve solicitação para aprovação de uso emergencial ou registro para a vacina Covaxin até o momento. Dados sobre a vacina Covaxin estão em análise pelo procedimento de submissão contínua.

A GGMED informou não ter conhecimento de alerta referente à qualidade, eficácia e segurança da vacina emitido até o momento.

A apresentação, que há pouco assistimos, sintetiza os principais aspectos apontados pela área técnica, os quais destaco abaixo.

A gerência afirma: que o exame realizado não é uma avaliação de qualidade, segurança e eficácia de dados da vacina; que a vacina possui um adjuvante novo, imidazoquinolina, ou IMDG, não utilizado ainda comercialmente em nenhuma vacina aprovada no mundo. Esse adjuvante é um agonista do receptor Toll-like (TLR) 7/8 e tem potencial relação com desenvolvimento de doença autoimune; que o tempo de acompanhamento médio declarado era de cerca de 45 dias. Esse tempo é insuficiente uma vez que é consenso internacional um acompanhamento mínimo dos participantes de pelo menos 2 meses para comprovação de perfil de segurança e eficácia; que foram apresentados dados de estudo de estabilidade de longa duração (2-8°C) de até 5 meses para 1 lote de desenvolvimento e de até 3 meses para lotes comerciais. Segundo os documentos apresentados, os testes relacionados ao 6º mês de armazenamento dos lotes comerciais devem ser executados em 05/2021; que há ainda pendência nos estudos clínicos, quanto à disponibilização de resultados-chave para o estabelecimento da relação benefício-risco da vacina Covaxin, especificamente, quanto à avaliação de imunogenicidade e o relatório interino de segurança.

Nesse sentido, a gerência, considerando elemento de proteção à saúde pública e cumprimento da missão da Anvisa, considerando as incertezas técnicas ainda presentes e o cenário da pandemia, recomenda a adoção de condicionantes na eventual autorização da importação excepcional,

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2011

para fins de distribuição e uso em CONDIÇÕES CONTROLADAS PELO MINISTÉRIO DA SAÚDE da vacina Covaxin.

Para tanto, sugere: que devem ser apresentados os resultados de imunogenicidade e relatório clínico de segurança, conforme datas declaradas pela representante no Brasil; que os lotes a serem destinados ao Brasil devem ser provenientes das plantas produtivas inspecionadas pela Anvisa; que os lotes importados devem ser aprovados pelo INCQS por meio de análise laboratorial que demonstrem a potência da vacina, o conteúdo antigênico e também assegurem a sua qualidade - é fundamental, ainda, que sejam disponibilizados os Procedimentos Operacionais Padrão, materiais de referência, protocolos e insumos específicos; que se imponha contra-indicação ou restrição de uso - a vacina não deverá ser utilizada por pessoas com hipersensibilidade a qualquer dos componentes da fórmula, gravidez, lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos 12 meses, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia; não poderão receber essa vacina pessoas que tenham recebido outra vacina contra Covid-19, que tenham febre, HIV, hepatite B ou C, que tenham se vacinado nas 4 semanas anteriores, tenham recebido imunoglobulinas ou hemoderivados 3 meses antes, tenham recebido tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação 36 meses antes, tenham recebido terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos (em resumo, só adultos saudáveis estariam aptos a receber a vacina).

A área condiciona ainda que o Ministério da Saúde: disponibilize às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português; suspenda a importação, distribuição e uso, caso a Anvisa ou a OMS reprovem o uso emergencial da vacina Covaxin; comunique amplamente à sociedade que a vacina Covaxin importada não possui avaliação da Anvisa quanto aos critérios de qualidade, eficácia e segurança.

A Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS) se manifestou por meio da Nota Técnica nº 85/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, na qual informou ter recebido novos pedidos de certificação para a empresa Bharat Biotech International Limited (Hyderabad/Índia), protocolados através dos expedientes 1998936210 (Linha Estéril), em 24/05/2021, e 2014094217 (IFA), em 25/05/2021. A área também analisou os últimos documentos enviados em 31/05/2021, referentes às não conformidades (NC) restantes detectadas na inspeção de 01-05/03/2021, NC maior nº 1 e NC maior nº 10.

As informações da referida Nota Técnica também foram manifestadas durante a apresentação da Gerente Geral da área e eu apresentarei, a seguir, os principais aspectos.

Para a análise atual, foram considerados os dois novos pedidos de certificação para o IFA Biológico e Vacina, nos quais a empresa apresentou novas evidências relativas às não conformidades que ensejaram a emissão do relatório com resultado Ação Oficial Determinada (AOD) e subsidiaram a decisão anterior da Diretoria Colegiada.

A área destacou que a empresa corrigiu a maioria das não conformidades apontadas pela equipe técnica e apresentou evidências dessas correções, incluindo os itens que ensejaram a negativa anterior, ressaltando que tais itens foram cumpridos integralmente quanto aos requisitos de BPF:

- Inclusão de Teste de Potência específico e controle para impurezas no produto acabado;

- Validação da Inativação Viral no IFA biológico;

- Ajustes na validação da Filtração Esterilizante.

A GGFIS informou que os expedientes 1998936/21-0 e 2014094/21-7 receberam exigências técnicas e foram apresentados dados adicionais referentes aos ajustes sobre a validação da vida útil da resina e controles ao longo de seu reuso. Tal item foi cumprido integralmente quanto aos requisitos de BPF.

Os protocolos e relatórios de validação dos métodos analíticos para quantificação de antígeno (proteína S) para o IFA e determinação da potência (imunogenicidade em camundongos) para a

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2012

vacina (produto terminado) foram apresentados. A GGFIS informou que os parâmetros de testes estão conforme a regulamentação. A empresa demonstrou capacidade em executar o programa de validação, dentro dos requisitos de BPF. Os resultados detalhados dos estudos são analisados pela área de registro quando da aprovação. Portanto, esse item foi cumprido integralmente quanto aos requisitos de BPF.

Por fim, a GGFIS conclui que a Bharat Biotech cumpriu com todos os itens pendentes relacionados às Boas Práticas de Fabricação que ensejaram a negativa do pedido de importação excepcional anterior, permitindo que a área sugira a Autorização da Importação Excepcional. Adicionalmente, a Bharat Biotech apresentou plano de ação adequado e cumpriu com todas as pendências relacionadas ao pedido de certificação de Boas Práticas de Fabricação.

Adicionalmente, a Bharat Biotech apresentou plano de ação adequado e cumpriu com todas as pendências relacionadas ao pedido de certificação de Boas Práticas de Fabricação.

A Gerência Geral de Monitoramento de Produtos Sujeitos à Vigilância Sanitária (GGMON) se manifestou sobre a vacina por meio do Despacho nº 310/2021/SEI/GGMON/DIRE5/ANVISA, no qual relatou que as informações sobre reações adversas com a vacina Covaxin foram descritas em bula aprovada pela autoridade sanitária indiana. Não há, nesta bula, reações adversas que destoem do perfil das demais vacinas. Entretanto, salientou que não foram obtidos dados de pós-mercado para analisar resultados de segurança após uso na vida real.

A área também informou que não foram encontrados alertas de segurança emitidos por organismos internacionais e que não foram encontrados registros junto à base de dados mundial VigiLyze para a vacina Covaxin.

Por fim, a GGMON ressaltou que o momento epidemiológico nacional reforça a necessidade do estabelecimento de estratégias robustas para promover rastreio de casos assintomáticos pela testagem, engajamento da população quanto às medidas não farmacológicas e a disponibilidade de vacinas para a imunização em massa da população brasileira, a fim de reduzir o impacto da doença sobre a saúde coletiva, sobretudo em relação às populações mais vulneráveis.

Apesar da escassez de dados relacionados ao pós uso em outros países e da ausência de registros de eventos adversos na base internacional, a área considera importante mencionar que **a vacina utiliza uma plataforma clássica para produzir imunidade contra a Covid-19**, utilizando vírus inativado para provocar o sistema imunológico do vacinado para a produção de anticorpos e células T contra o Sars-Cov-2. Tal plataforma tende a ser mais segura.

De acordo com a GGMON, esse conjunto de fatos e informações pode contribuir para a tomada de decisão da diretoria colegiada da Anvisa quanto aos benefícios e riscos e, se autorizada, a área recomenda fortemente que sejam adotados integralmente os seguintes os mecanismos de monitoramento e prevenção de eventos adversos pós-vacinais por parte do Ministério da Saúde, abaixo relacionados:

- Bula e orientações de uso, transporte e condições de armazenamento disponibilizadas em idioma português aos profissionais de saúde;

- Adoção de monitorização intensiva: os vacinados devem ser acompanhados para verificação de desfechos de segurança e efetividade, tais como eventos adversos pós-vacinais, infecção pelo Sars-Cov-2 (incluindo análise de variante do coronavírus), internação por Covid-19, óbito por Covid-19 após a primeira e segunda doses. Deverão ser adotados mecanismos pela coordenação de imunizações, e por instituição independe com reconhecido saber, para rastreabilidade de vacinados e das vacinas aplicadas, incluindo o lote da vacina que foi aplicada em cada um deles, da primeira e da segunda doses, bem como avaliação e reporte dos resultados;

- Notificação de eventos adversos: os eventos adversos graves devem ser comunicados à Anvisa em até 72 horas por meio do sistema VigiMed. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

- Emissão de relatório de avaliação benefício-risco da vacina: o importador deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2013

de segurança e efetividade (desfechos supramencionados) de cada lote importado, detalhando, segundo as boas práticas de farmacovigilância;

- Monitorização de alertas sanitários internacionais: caberá ao importador acompanhar diariamente alertas internacionais de segurança da vacina Covaxin emitidos pelos países que estão utilizando a vacina;

- Comunicação de alertas de segurança: a Anvisa deverá ser comunicada imediatamente de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

- Compartilhamento imediato do mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados.

Por fim, a GGMON informou que a Anvisa e o Ministério da Saúde têm trabalhado em estreita colaboração no monitoramento dos eventos adversos pós vacinais, favorecendo a adoção conjunta de medidas sanitárias de forma imediata, quando necessário.

A Gerência de Laboratórios de Saúde Pública (GELAS) se manifestou por meio do Despacho nº 157/2021/SEI/GELAS/DIRE4/ANVISA, no qual informa que a RDC nº 476/21, dentre outros requisitos, determina no Art. 9º que os lotes das vacinas importadas somente poderão ser destinados ao uso após liberação pelo Instituto Nacional de Controle de Qualidade em Saúde (INCQS), conforme a RDC nº 73/2008. E ainda, que cabe ao importador apresentar a documentação ao INCQS para esta liberação.

Por sua vez, a RDC nº 73/2008 determina que, imediatamente após internalização da carga no país, deve ser protocolado no INCQS (pela COADI/MS, detentor do registro ou importador) o PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE (anexo II da RDC) para avaliação pelo INCQS de forma a subsidiar a liberação dos lotes de vacinas.

Assim, cientes da relevância e urgência do interesse público na disponibilização de lotes de vacina contra a COVID-19, a GELAS tem realizado reuniões entre as empresas detentoras/importadoras das vacinas e o INCQS e solicitado o envio ao INCQS, no tempo mais breve possível, da documentação referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE DE QUALIDADE (PRPCQ) e, se possível, do estudo de estabilidade da vacina, de forma a adiantar a análise.

Em relação à vacina Covaxin, a GELAS realizou reuniões com o INCQS e representantes da empresa Precisa Medicamentos para esta solicitação, nos dias 31/03/21 e 05/05/21.

Diante do exposto, a área esclareceu que, caso a importação em caráter excepcional da vacina Covaxin seja aprovada, os lotes importados devem ser liberados pelo INCQS para o uso no Brasil, conforme determinado nas RDCs nº 73/2008 e nº 476/2021. A empresa Precisa Medicamentos está ciente desta necessidade e conforme reuniões realizadas, a empresa apresentou informações sobre a documentação que atende ao exigido para a análise documental pelo INCQS, referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE, de forma a adiantar a análise, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades.

Por fim, a GELAS destacou que a empresa tem ainda pendente a apresentação junto ao INCQS do documento sobre a metodologia para a determinação da Potência ou Conteúdo antigênico da vacina. A empresa Precisa informou no dia 25/05 que está encerrando a validação dos métodos de potência e antígeno, e até o dia 27/05 enviará o retorno a todos os questionamentos do INCQS.

A partir de todo o exposto pelas áreas técnicas desta Agência, minha avaliação será conduzida a fim de considerar todas as observações apontadas e respectivas ações mitigatórias necessárias. Ademais, acrescentarei à minha análise aspectos de saúde pública que apresentarei adiante.

4. DO CENÁRIO EPIDEMIOLÓGICO E SANITÁRIO DO BRASIL

São incontroversos e notórios o recrudescimento das taxas de contaminação do coronavírus, o aumento do número de internações e de mortes em decorrência da pandemia da Covid-19.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2014

O momento atual vem se mostrando ainda mais dramático diante das evidências científicas de novas cepas, mutações e variantes do Coronavírus.

Em recentes decisões, o Supremo Tribunal Federal tem afirmado, diante do quadro pandêmico, que não é constitucionalmente aceitável qualquer retrocesso nas políticas públicas de saúde (ADI N. 6341, Rel. Min. Marco Aurélio, redator p/acórdão Min. Edson Fachin, Plenário).

A Anvisa, como agente regulador, se coloca nesse contexto, também como agente indutor de políticas. A finalidade institucional de promover a proteção da saúde da população alcança perspectivas diversas de atuação.

Além das atividades típicas de regulação, a atuação da Anvisa reflete diretamente na condição de saúde da população, pois estamos tratando, na ponta da linha, do adoecimento ou não das pessoas, do seu bem-estar e, sobretudo, da preservação de suas vidas.

O contexto sanitário que o nosso país atravessa nos põe diante da necessidade de viabilizar o maior número de vacinas e medicamentos. Todo esforço se volta ao propósito de amenizar o sofrimento da população, abrandar a angústia dos gestores públicos e combater o esgotamento dos nossos profissionais de saúde.

De acordo com dados disponibilizados pelo Ministério da Saúde em 22/05/21 (https://susanalitico.saude.gov.br/extensions/covid-19_html/covid-19_html.html), o Brasil registra 15.970.949 casos de Covid-19 acumulados (7.600 por 100 mil hab), sendo 76.855 casos novos registrados nas últimas 24 horas. Quanto a óbitos, o Brasil registra 446.309 mortes acumuladas desde o início da pandemia (212 por 100 mil hab) e 2.215 nas últimas 24 horas.

Conforme boletim epidemiológico da Organização Mundial da Saúde (OMS), publicado em 4 de maio de 2021, e o Painel da OMS, o número global de casos da Covid-19 permanece nos níveis mais altos desde o início da pandemia, com mais de 5,4 milhões de novos casos semanais, após nove semanas consecutivas de aumentos. Os novos óbitos nos últimos sete dias continuam em ascendência pela sétima semana consecutiva, totalizando mais de 89.000 mortes. Globalmente, a Índia é o país que apresenta o maior número de novos casos e novos óbitos, nos últimos sete dias. Em seguida à Índia, aparecem Brasil e Estados Unidos da América.

O Brasil, embora tenha 2,7% da população mundial, até 15 de maio respondeu por 9,6% dos casos e 12,9% dos óbitos mundiais por Covid-19. Tendo como referência os dados disponíveis no site *Our World in Data* (https://ourworldindata.org/coronavirus) até 15 de maio, dos países com pelo menos 100 mil óbitos acumulados, o Brasil encontrava-se em segundo lugar, com 439 mil mortos, sendo superado apenas pelos EUA, com 587 mil. Os seis países logo abaixo do Brasil eram Índia (283.248), México (220.746), Reino Unido (127.953), Itália (124.497), Rússia (114.619) e França (108.201). Dos novos óbitos por milhão de habitantes, de acordo com a média móvel nos últimos sete dias neste conjunto de países, o Brasil se encontrava em primeiro lugar, com 9,01, sendo seguido pela Índia (3,01), Itália (2,87), Rússia (2,5), França (2,34), EUA (1,81), México (1,58) e Reino Unido (0,13). Analisando os novos óbitos de acordo com a média móvel nos últimos sete dias é possível constatar que, com exceção da Índia, que começou a apresentar um crescimento exponencial de casos no início de abril, todos os outros países listados anteriormente apresentaram tendência de queda. O Brasil, que desde meados de fevereiro vinha apresentando tendência de crescimento de óbitos, e, no período entre 9 de março (1.572 óbitos) e 25 de abril (2.494 óbitos), esteve em primeiro lugar, apresenta, entretanto, um quadro preocupante.

De acordo com a OMS (https://covid19.who.int/), considerando-se o número de casos confirmados nos últimos sete dias, o Brasil, com 460.105 casos, aparece em 2º lugar no mundo, atrás apenas da Índia. O mesmo ocorre ao considerarmos os casos confirmados nas últimas 24 horas, em que o Brasil registrou a triste marca de 82.039 casos, também atrás apenas da Índia.

Em número de mortes, o cenário se repete. O Brasil aparece em 2º lugar, atrás da Índia, com cerca de 2.403 mortes diárias. Nos últimos sete dias, a Índia registrou 29.318 mortes por Covid-19, o Brasil registrou 13.677 mortes e os Estados Unidos, que aparecem em 3º lugar, registraram 3.969 mortes. Portanto, é gritante a diferença entre as vidas perdidas diariamente no Brasil e nos demais países do mundo.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2015

O momento pelo qual o Brasil atravessa é absolutamente crítico, com evolução negativa do contexto epidemiológico relacionado à pandemia de SARS-CoV-2, ocupando ainda lugar de destaque entre os países com maior número de casos e mortes cumulativos.

Apesar do esforço por medidas sanitárias em todo o País, com número significativo de cidades, especialmente, capitais, implementando restrições mais rígidas, percebe-se que a adesão da população às medidas eficazes ao controle da disseminação do vírus tem-se demostrado aquém do esforço necessário à superação do contexto epidemiológico atual.

Não há dúvida de que vivenciamos o pior momento da crise sanitária provocada pela Covid-19.

Os índices de novos casos da doença alcançam patamares muito elevados em todas as regiões, estados e municípios. Parece ter se tornado rotina assistirmos aos números da pandemia nos jornais, anunciando mais de 2.000 vidas perdidas a cada dia, que juntas já somam mais de 450 mil brasileiros e brasileiras levados por essa doença.

Mas não são apenas números, são vidas, famílias, histórias. Após 15 meses de pandemia no Brasil, posso afirmar que não há um cidadão sequer que não tenha sido afetado, seja pela dor, sofrimento, medo, ou mesmo pela séria crise econômica e social resultante dessa pandemia.

Para agravar esse cenário, a projeção de dados sugere que o Brasil poderá vivenciar a terceira onda epidemiológica da infecção pela Covid-19, entre junho e julho de 2021, com a circulação concomitante de outros vírus respiratórios - Síndrome Respiratória Aguda Grave - e de outras variantes, alcançando novo pico de mortes em 04 de julho, caso ocorra continuidade do relaxamento de medidas não farmacológicas e permaneça no mesmo ritmo a velocidade da vacinação no país. E a cada rodada estatística vamos para um nível ainda mais alto de contaminação e morte.

Segundo o Instituto de Métricas e Avaliação em Saúde, da Universidade de Washington, nos Estados Unidos, com base nos dados observados até 25 de abril, a projeção de óbitos tende a apresentar uma importante alteração no cenário nacional, entre o outono e o inverno. Estima-se que essa “terceira onda” seja agravada pelo esgotamento social das medidas não farmacológicas e a velocidade da vacinação, alcançando o pico de mortalidade entre os dias 09 de junho e 04 de julho de 2021. Adicionalmente, deve-se considerar a possibilidade de circulação da variante B.1.617 no Brasil, bem como a circulação de outros vírus respiratórios concomitantemente, nesse período. Cabe, ainda, ressaltar que o primeiro pico da pandemia no Brasil se deu justamente nos meses de inverno nas regiões Sul, Sudeste e Centro-Oeste. De acordo com a projeção, o Brasil deve alcançar 575.635 mortes devido à Covid-19 até o dia 1° de agosto de 2021. Alguns especialistas acham que esse número é ainda conservador.

De acordo com o Boletim do Observatório Covid-19 referente ao período de 2 a 15 de maio de 2021, divulgado pela Fiocruz (https://portal.fiocruz.br/sites/portal.fiocruz.br/files/documentos/boletim_covid_2021-semanas_18-19-red.pdf), as taxas de incidência, que refletem os casos novos de Covid-19, permanecem em um platô alto. Ao mesmo tempo, nas últimas semanas foi observada uma preocupante mudança nas tendências das notificações por Síndrome Respiratória Aguda Grave (SRAG), que são atualmente em grande parte devido a infecções por Sars-CoV-2. Muitos estados que tiveram redução de casos de SRAG nas semanas anteriores apresentam tendência de reversão ou mesmo um aumento no número de casos. Esse novo padrão epidemiológico pode ser resultado de uma conjunção de fatores como a vacinação de populações de maior risco, uma pequena redução da ocupação de leitos hospitalares, bem como o já sinalizado processo de rejuvenescimento da pandemia, de modo que, pela primeira vez para o Brasil, a mediana de idade do total de casos internados e também nas UTIs está abaixo dos 60 anos.

Esse novo cenário socioepidemiológico é preocupante, quando considerado o ritmo ainda lento de vacinação no país e com a introdução de novas variantes do vírus SarsCoV-2 no Brasil, como a B.1.617 identificada inicialmente na Índia. Além disso, a flexibilização de medidas não-farmacológicas pode intensificar a transmissão, com a geração de casos graves e óbitos nas próximas semanas, pressionando os serviços de saúde ainda sobrecarregados e com limitações para reposição de estoques

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2016

de medicamentos e insumos. Nesse sentido, é premente a intensificação de ações de vigilância e prevenção em saúde.

De acordo com os números, o ano de 2021 apresenta uma dinâmica da pandemia de maior aceleração da incidência e mortalidade. Além disso, os dados de internação vêm, a cada semana, identificando o rejuvenescimento da pandemia, com deslocamento da curva em direção a faixas etárias mais jovens.

Vale reforçar que o rejuvenescimento, por um lado, pode ser uma expressão da eficácia da vacinação, ao notar uma retração na contribuição de idosos nos casos e óbitos nas semanas mais recentes. Adicionalmente, este diagnóstico significa que as gerações mais jovens, que passam a contribuir de forma mais importante para o cenário da pandemia, passarão a apresentar maior ocorrência de síndromes pós-COVID e situações de COVID longa, comprometendo assim de forma crônica sua qualidade de vida e sua capacidade para atividades cotidianas, incluindo o trabalho.

A mensagem é clara: é preciso olhar para os mais jovens, e incluí-los no plano de vacinação com a brevidade necessária.

O novo Boletim do Observatório Covid-19, divulgado no dia 26/05, alerta para o recrudescimento da pandemia nas próximas semanas. Mostra que houve um aumento das taxas de incidência de casos novos da covid-19 entre 16 e 22 de maio. O boletim ressalta que o aumento no número de internações, demonstrado pelo novo aumento das taxas de ocupação dos leitos de UTI é resultado desse novo quadro da pandemia no Brasil. Esse boletim mostra, também, que, entre os dias 17 e 24 de maio de 2021, as taxas de ocupação de leitos de unidade de terapia intensiva (UTI) de Covid-19 para adultos no Sistema Único de Saúde (SUS) aumentaram ou se mantiveram estáveis, em níveis elevados, em praticamente todo o Brasil. Isso reforçaria a avaliação de que a tendência de queda, que vinha sendo observada até por volta do dia 10 deste mês, se interrompeu.

Ratificando os dados do Boletim da Fiocruz, a análise de dados dos boletins epidemiológicos divulgados pelo governo de São Paulo indica uma aceleração no número de mortes por Covid-19 entre pessoas com 69 anos ou menos. Por outro lado, nas faixas etárias mais velhas as mortes continuam ocorrendo, porém, em uma velocidade menor. Essa inversão da pirâmide de mortes já havia sido detectada pela plataforma SP Covid-19 Info Tracker, ferramenta criada por pesquisadores da USP e da Unesp com apoio da Fapesp (Fundação de Amparo à Pesquisa no Estado de São Paulo) para acompanhar a evolução da pandemia no estado. Os fatores para a inversão podem estar relacionados ao efeito das variantes, especialmente a P1, que começa a provocar impactos mais sérios nas faixas mais jovens, e o avanço da vacinação na categoria dos mais idosos em detrimento dos mais jovens, o que reforça a importância da vacinação.

Sobre o surgimento de variantes, todos os vírus, incluindo o SARS-CoV-2, evoluem com o tempo. Quando um vírus se replica ou faz cópias de si mesmo, às vezes muda um pouco, o que é normal para um vírus. Essas mudanças são chamadas de "mutações". Um vírus com uma ou mais novas mutações é referido como uma "variante" do vírus original. E quando um vírus está amplamente circulando em uma população e causando muitas infecções, a probabilidade de o vírus sofrer mutação aumenta. Quanto mais oportunidades um vírus tem de se espalhar, mais ele se replica – e mais oportunidades ele tem de sofrer mudanças. Dependendo de onde as alterações estão localizadas no material genético do vírus, elas podem afetar as propriedades de um vírus, como a transmissão (por exemplo, pode se espalhar mais ou menos facilmente) ou gravidade (por exemplo, pode causar doenças mais ou menos graves).

Dessa forma, impedir a propagação do vírus é o objetivo que se impõe, a fim de prevenir mutações que possam afetar a dispersão e virulência do Sars-Cov-2. As medidas atuais para reduzir a transmissão – incluindo lavagem frequente das mãos, uso de máscara, distanciamento físico, boa ventilação e evitar locais lotados ou ambientes fechados – continuam trabalhando contra a disseminação de novas variantes, reduzindo a quantidade de transmissão viral e, portanto, também reduzindo oportunidades para o vírus sofrer mutação.

Contudo, ampliar a imunização é sem dúvida a maneira mais eficiente de não expor as pessoas ao vírus e ao risco de novas variantes. À medida que mais pessoas são vacinadas, espera-se que a

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2017

circulação do vírus diminua, o que levará a menos mutações virais.

Atualmente, existem três principais variantes de atenção do SARS-CoV-2 sob vigilância nos países (WHO weekly epidemiological update on COVID-19 - 4 May 2021):

- VOC 202012/01 (B.1.1.7), comunicada em 14 de dezembro de 2020 por autoridades do Reino Unido, e já identificada em 142 países;

- VOC 501Y.V2 (B.1.35197), comunicada por autoridades da África do Sul em 18 de dezembro de 2020, e já identificada em 97 países;

- VOC P.1 (B.1.1.28.1), identificada inicialmente no Japão, em 9 de janeiro de 2021, em quatro viajantes procedentes do Brasil e que estiveram em Manaus/AM. Dias depois, pesquisadores brasileiros a identificaram em amostras de pacientes em Manaus/AM. Essa VOC já está disseminada em 56 países.

Ademais, em 10 de maio, a OMS declarou como variante de atenção global a linhagem B.1.617, relatada inicialmente na Índia em dezembro de 2020. A modelagem preliminar pela OMS sugere que a variante B.1.617 tem uma taxa de crescimento mais alta do que outras variantes circulantes na Índia, sugerindo um potencial aumento de transmissibilidade, com outras variantes co-circulantes também demonstrando maior transmissibilidade. Essa variante já foi identificada em 49 países nas seis regiões da OMS (WHO weekly epidemiological update on COVID-19 - 11 May 2021).

No Brasil, a epidemia de SARS-CoV-2 iniciou a partir de duas linhagens, a VOC B.1.1.28 (P1) e a variante B.1.1.33. Através da análise de 217 sequências completas do genoma SARS-CoV-2, no estudo *Genomic monitoring unveil the early detection of the SARS-CoV-2 B.1.351 lineage (20H/501Y.V2) in Brazil*, os pesquisadores observaram prevalência da variante de atenção P1 (Brasil) com 64,05%, seguida da variante B.1.1.28 com 25,34%. Nesse contexto, o aumento da transmissibilidade, que já foi associado às VOC, sugere um maior número de casos positivos, internações e mortalidade observados no Brasil.

O relaxamento das medidas de proteção e a circulação de novas cepas do vírus podem propiciar o agravamento da crise sanitária e social. O recrudescimento da epidemia em diversos estados leva, por sua vez, conforme temos assistido, ao colapso de seus sistemas de saúde. Infelizmente, a baixa cobertura vacinal e a lentidão na oferta de vacinas ainda não permitem que esse quadro possa ser revertido em curto prazo. O atual cenário da crise sanitária vivida pelo país agrava o estado de emergência nacional e exige medidas urgentes e adequadas para sua superação.

As vacinas constituem a ferramenta mais eficaz e barata na batalha contra a Covid-19, com benefícios claros e imediatos para a saúde pública e para preservação das vidas.

As vacinas em uso atualmente no Brasil são: Coronavac/Sinovac, autorizada para o Instituto Butantan, Covishield/Univ.Oxford/Astrazeneca, autorizada para a Fiocruz, e Comirnaty, autorizada para a Pfizer. No dia 31/03/2021, foi aprovada para uso emergencial a vacina da Janssen, mas esta ainda não está disponível para uso no Brasil.

Até o dia 15/05/21, estimava-se terem sido vacinadas 38.719.727 pessoas com a 1ª dose, cobrindo 24,19% da população brasileira a ser vacinada, e 19.153.355 com a 2ª, 11,97%, conforme o Instituto de Comunicação e Informação Científica e Tecnológica em Saúde – ICICT. A população vacinada ainda não impactou globalmente na pandemia no Brasil. Há registros de casos em todos os municípios, atingindo a taxa de 212 óbitos para cada 100 mil habitantes.

Para agravar esse cenário, nos últimos dias, a imprensa noticiou o atraso no fornecimento do insumo farmacêutico ativo (IFA) para fabricação das vacinas Coronavac e Covishield no Brasil, o que pode prejudicar ainda mais o avanço da campanha de imunização. O Instituto Butantan confirmou que atrasará o cumprimento do contrato para fornecimento de doses da Coronavac ao Ministério da Saúde devido aos atrasos no envio de insumo proveniente da China. A Fiocruz, por sua vez, também informou que precisaria suspender a produção do imunizante pela falta do IFA. A vacina da Pfizer, dadas as suas características de conservação, possui requerimentos específicos de distribuição e logística, o que dificulta seu uso por todas as regiões do país. Portanto, o que se vê ainda é um cenário de fragilidade no abastecimento de vacinas para imunização da população brasileira.

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2018

Ademais, de acordo com a imprensa, o Ministério da Saúde reduziu para 43,8 milhões a previsão de doses de vacinas contra a Covid a serem distribuídas em junho. Anteriormente, a estimativa era de 52,2 milhões de doses. Essa mudança ocorreu, principalmente, devido a dificuldades na obtenção de insumos usados pela Fiocruz para a fabricação da vacina.

Outro ponto de preocupação reside em uma possível necessidade de incremento de 3ª dose de algumas vacinas contra a Covid-19, a fim de aumentar a eficácia do imunizante e ampliar a geração de anticorpos nos vacinados. A dose extra pode ser necessária, também, para aumentar proteção contra as novas variantes. Esse cenário demandaria um aumento expressivo na disponibilização dos já escassos imunizantes, reforçando a importância na ampliação das vacinas disponíveis à população.

O agravamento da pandemia afeta negativamente, também, os serviços públicos brasileiros, em especial os de saúde, e outros setores importantes da economia brasileira.

O conjunto de dados apresentados revela que o Brasil se encontra ainda em um momento de grave crise no enfrentamento da pandemia.

Como sabemos, faltam vacinas, o que, claro, implica saturação do sistema de saúde, mais doentes e, infelizmente, o aumento do número de mortes.

O momento é de crise sanitária sem precedentes na história recente da humanidade e do país.

Tal cenário nos convoca a medidas ordinárias e extraordinárias no enfrentamento da pandemia. Além da cooperação institucional e convergência de esforços, é papel da Anvisa, nesse contexto, e no exercício de suas atribuições, ser agente provedor e indutor de todas as alternativas terapêuticas e soluções vacinais necessárias à contenção da disseminação do vírus e à defesa da saúde da população.

5. DAS CONSIDERAÇÕES FINAIS QUE ANTECEDEM O VOTO

De todo o exposto, percebe-se que estamos sim, diante de uma situação excepcional. Talvez, excepcionalíssima. E, nesses casos excepcionais, podem ser necessárias adequações no modelo tradicional de vigilância sanitária, com o consequente e proporcional fortalecimento dos mecanismos de controle pós-mercado.

Infelizmente, o cenário é de emergência de saúde pública epidemiológica, de caráter nacional, decretada pela Portaria nº 188, de 3 de fevereiro de 2020 pelo Senhor Ministro.

E, corroborando com tal fato, tivemos a edição da Lei nº 14.124, de 10 de março de 2021, que dispõe sobre as medidas excepcionais relativas à aquisição de vacinas e de insumos e à contratação de bens e serviços de logística, de tecnologia da informação e comunicação, de comunicação social e publicitária e de treinamentos destinados à vacinação contra a covid-19 e sobre o Plano Nacional de Operacionalização da Vacinação contra a Covid-19.

Como agentes públicos que somos, no pleno exercício de nossos mandatos nesta Agência, não podemos ignorar este fato superveniente.

Não podemos negar nem diminuir os instrumentos regulatórios vigentes e que foram solidamente construídos para garantir acesso à imunização em um momento de escassez de vacinas.

As informações sobre as incertezas das vacinas são todas públicas desde o dia 17 janeiro de 2021. Ali reconhecemos a importância ainda maior da transparência; ali reconhecemos a necessidade de compartilhar com o país as nossas dificuldades e fragilidades.

Seguiremos assim, em consonância com o que a Lei nº 9.782/99 nos determina: a Agência terá por finalidade institucional promover a proteção da saúde da população, por intermédio do controle sanitário da produção e da comercialização de produtos e serviços submetidos à vigilância sanitária. E entendo ser exatamente isso que estamos fazendo diante da importação excepcional para fins de distribuição e uso da vacina em condições controladas e bem definidas.

O cenário atual da Emergência de Saúde Pública e as projeções para os próximos meses, sobretudo frente ao agravamento da pandemia no nosso País, da manutenção dos altos índices de

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2019

mortes diárias e da limitada disponibilidade de imunizantes no mundo, reforçam a urgência na disponibilização de vacinas, indo ao encontro do objetivo do legislador e do interesse público no acesso a vacinas, na preservação de vidas, na diminuição do sofrimento das pessoas e no combate ao vírus.

A vacinação é uma das intervenções de saúde pública mais custo-efetivas e seus benefícios são indiscutíveis, podendo ser exemplificados pela erradicação da varíola e da poliomielite na maioria dos países do mundo. O sucesso da vacinação contra a Covid-19, e sua necessária celeridade, estão intimamente relacionados com a disponibilidade de quantidades de vacinas suficientes para serem aplicadas a toda a população passível de imunização.

Os dados mostram que as chances de ser internado ou morrer com o SarsCoV-2 caem drasticamente depois da imunização completa. As novas variantes do SarsCoV-2, algumas mais transmissíveis, são outro fator de atenção. Ainda não se sabe com precisão se as vacinas disponíveis são capazes de combater todas as novas versões do patógeno. Importante lembrar que a vacinação não busca proteção individual, mas sim coletiva.

Uma vacina com pelo menos 50% de eficácia tem um impacto significativo sobre a doença, tanto em nível individual quanto social. As vacinas submetidas ao crivo da importação superam significativamente esse patamar de eficácia, conforme asseguram as autoridades estrangeiras.

Precisamos falar não apenas da eficácia da vacina, mas também da sua efetividade. A eficácia é um fenômeno individual, mas, em programas amplos de vacinação, os não imunizados são, também, protegidos pelos vacinados. Isso reflete a efetividade da vacina e trata-se de imunidade coletiva. Se a população for coberta pela vacina, ela estará protegida. Ressalto: nenhuma vacina é 100% eficaz, mas dada uma ampla cobertura do processo de vacinação, ela protege a população.

Em publicação científica recente, foi demonstrado que, depois que as pessoas são vacinadas contra a Covid-19, os níveis de anticorpos bloqueadores de infecção em seu sangue são um forte indicador de quanta proteção eles ganharam contra a doença, usando método de modelagem (Khoury, D. S. et al. Nature Med. https://doi.org/10.1038/s41591-021-01377-8 (2021). A pesquisa mostrou que mesmo a presença de pequenas quantidades desses potentes 'anticorpos neutralizantes' indica que uma vacina é eficaz na proteção contra a Covid-19.

A análise de dados de anticorpos neutralizantes a partir de testes com sete vacinas amplamente utilizadas (mRNA-1273, NVX-CoV2373, BNT162b2, rAd26-S+rAd5-S, ChAdOx1 nCoV-19, Ad26.COV2.S e CoronaVac) mostrou uma forte ligação entre os níveis de anticorpos dos participantes registrados em estudos em estágio inicial e os resultados de eficácia da vacina em estudos em estágio final. Os pesquisadores estimam que uma vacina tenha eficácia de 50%, mesmo que induza níveis de anticorpos 80% inferiores aos encontrados, em média, em uma pessoa que se recuperou da Covid-19.

Os pesquisadores preveem que, como os níveis de anticorpos diminuem com o tempo, as vacinas de reforço podem ser necessárias em cerca de um ano, mas a proteção contra doenças graves pode durar muitos anos, mesmo sem eles. Tais dados reforçam, ainda mais, a importância da imunidade induzida pelas vacinas na proteção da população.

No nosso contexto, o senso de urgência torna-se parâmetro relevante, pois sabemos que, a cada dia, são pelo menos 2.000 vidas perdidas. Nossas avaliações, portanto, refletem a preocupação com o drama da vida real. Estamos mobilizados e guiados por elevado espírito de preservação da vida. Nossos julgamentos estão contaminados pela lógica da sobrevivência humana em nosso país.

Queremos vacinas e medicamentos. Somos uma agência conhecida por viabilizar o acesso. E, no presente caso, precisamos dar cumprimento ao mandamento legal, que nos impôs os critérios a serem adotados para a autorização de importação de vacinas autorizadas em outros países. Não nos cabe questionar o preceito legal. Em situação de guerra, todas as armas visam combater o inimigo e, ao mesmo tempo, salvar vidas.

Sabemos que ainda existem lacunas de informação quanto aos aspectos de qualidade, segurança e eficácia das vacinas Sputnik V e Covaxin. Mas, mesmo diante das incertezas ainda presentes, preciso não apenas considerar o diploma legal que reflete o desejo do legislador em ampliar a

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2020

disponibilidade de vacinas e medicamentos contra a Covid-19 no Brasil, como também enxergar o dramático quadro sanitário em que estamos inseridos.

As manifestações das áreas técnicas da Anvisa consideraram, por formação e condicionantes técnicas, a documentação submetida no âmbito de um processo de autorização de uso emergencial ou de registro. Portanto, nossos especialistas se ativeram aos limites de sua atuação ao realizarem uma avaliação robusta de qualidade, segurança e eficácia. No entanto, entendo que, nós diretores precisamos ter uma visão mais ampla desses pedidos de importação, precisamos sopesar na balança do risco-benefício o cenário sanitário e epidemiológico de nosso país, o cumprimento dos dispositivos legais, as ações mitigatórias propostas pelas áreas técnicas relacionadas às lacunas de informação, as responsabilidades do importador. Importante lembrar que, como última etapa no paradigma do risco, temos a avaliação das ações de controle de riscos realizadas, a fim de permitir a tomada de decisão do regulador.

Reforço que no presente Voto não estamos avaliando a autorização de uso emergencial. Também não estamos avaliando o registro sanitário da vacina. Tais avaliações contemplariam uma análise robusta de qualidade, segurança e eficácia. Aqui, estamos avaliando tão somente as circunstâncias para autorizar a importação em caráter excepcional das vacinas, de forma absolutamente controlada, à luz do cumprimento da Lei que trouxe esse instrumento regulatório como mais uma possibilidade no enfrentamento à pandemia.

E repito: o tripé da qualidade, segurança e eficácia que guia nossas decisões, que norteia nosso trabalho, neste caso foi atestado por meio da comprovação do registro ou uso emergencial pela autoridade sanitária internacional, conforme estabelecido pela RDC nº 476/2021.

Somos um país de muitas possibilidades e de riquezas naturais e humanas únicas. Isso, contudo, ainda não nos transformou numa nação rica e plenamente desenvolvida. As desigualdades são a melhor expressão das nossas deficiências. As limitações ainda são enormes.

O nosso gigantismo, a territorialidade continental, é uma variável perene e complexa. Prover medicamentos e vacinas, assegurar leitos, garantir o bem-estar das pessoas em todos os recônditos do país, é um desafio também gigante.

Esse binômio, limitação de recursos/gigantismo nos convoca à reflexão permanente. Tudo para nós acontece em grande escala.

Por sua vez, a verdade é que não conhecemos ainda os exatos rumos dessa pandemia, nem mesmo conhecemos a exata capacidade humana para lidar com todos os desdobramentos que ainda poderão sobrevir, e que devem ser suportados pela humanidade.

A solução farmacológica, heroica, conhecida é vacina. Múltiplas plataformas estão em desenvolvimento, com níveis de maturidade distintos. Plataformas que hoje são aparentemente estruturadas podem se enfraquecer ao longo da caminhada, ao soluço de algum tropeço não esperado.

Temos que lançar mão de alternativas. Não podemos desperdiçar opções vacinais, seja por que temos que considerar os sobressaltos da jornada, seja por que mais opções podem significar também estímulo à produção dessas plataformas em território nacional, como já acompanhamos por notícias recentes.

Essa não é uma decisão sobre vacinas apenas “do hoje”; estamos aqui pensando no amanhã. Pesa o receio de fulminar plataformas que podem vir a ser viáveis; não é inteligente descartá-las.

Nesse sentido, tenho por oportuno, observadas as condicionantes de controle apontadas pelas áreas técnicas, considerar uma utilização controlada, segura e inicial dessas vacinas no Brasil, desde que, dentre outras limitações, restrinja-se o público vacinado, limite-se a importação inicial a um volume pequeno e imponha-se teste laboratorial para certificação dos aspectos relevantes já suscitados neste voto. Nesse formato, ainda, que se estabeleça regime de vigilância capaz de interromper imediatamente a importação e a utilização da vacina.

6. **DO VOTO**

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2021

6.1 – Processo de importação:

A Gerência Geral de Portos, Aeroportos, Fronteiras e Recintos Alfandegados (GGPAF) se manifestou por meio do Despacho nº 710/2021/SEI/GGPAF/DIRE5/ANVISA, no qual informou que, de acordo com a RDC nº 476/2021, a importação de vacinas que tenham recebido autorização de uso emergencial por uma das autoridades estrangeiras contempladas na Lei nº 14.124/2021 poderá ser realizada conforme definido em seu art. 16.

Sendo assim, em caso de aprovação da excepcionalidade pela Diretoria Colegiada, caberá ao importador providenciar:

I. Peticionamento eletrônico de importação, nos termos do Capítulo III, Seção I, da Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008;

II. A descrição da mercadoria na licença de importação deve conter a inscrição "AUTORIZADA CONFORME A LEI nº 14.124, DE 2021";

III. Apresentação do comprovante de autorização excepcional e temporária de importação concedida pela Diretoria Colegiada da Anvisa;

IV. Certificado de liberação do lote, incluindo o laudo analítico de controle de qualidade do produto acabado e, quando existir, do diluente, emitido pelo fabricante;

V. Conhecimento de carga embarcada, podendo, na instrução processual inicial, ser apresentada versão preliminar desse documento; e

VI. Licenciamento de importação (LI) registrado no SISCOMEX

Para que se reduza o tempo de permanência das vacinas na área alfandegada, é recomendável que o processo de importação seja peticionado com antecedência à chegada da carga no Brasil, conforme disposto no art. 4º da Resolução RDC nº 476/2021. Para o peticionamento deverá ser utilizado o código de assunto 9611 - Fiscalização Sanitária para o Ministério da Saúde ou entidades vinculadas ao SUS, de mercadorias sob vigilância sanitária, destinado a programa de saúde pública.

Outras orientações sobre os procedimentos e etapas para o peticionamento do processo de importação podem ser obtidas na Cartilha do Peticionamento Eletrônico de Importação - PEI, que pode ser acessada no Portal da Anvisa no seguinte endereço: https://www.gov.br/anvisa/pt-br/centraisdeconteudo/publicacoes/portos-aeroportos-e-fronteiras/cartilha-pei-usuario-externo-versao-4.3/view.

Por fim, a área informou que a anuência na importação é concedida para a quantidade de doses descritas no licenciamento de importação (LI), portanto, em caso de importações fracionadas deverá ser realizado um peticionamento para cada LI registrada junto ao Siscomex.

6.2 – Obrigações dos requerentes:

De acordo com a RDC nº 476/2021, são obrigações do importador:

I - responsabilizar-se pela qualidade, eficácia e segurança da vacina a ser importada;

II - assegurar e monitorar as condições da cadeia de transporte;

III - assegurar que a vacina importada esteja com o prazo de validade vigente;

IV - estabelecer mecanismos para garantir condições gerais e manutenção da qualidade da vacina importada e o seu adequado armazenamento;

V - assegurar o monitoramento contínuo da temperatura de conservação e transporte, durante o trânsito internacional, desde o momento do embarque até a chegada ao local de armazenamento do importador e notificar à Anvisa, imediatamente, caso tenha ocorrido excursão de temperatura que possa comprometer a qualidade do produto;

VI - responsabilizar-se pela avaliação das excursões de temperatura que venham a ocorrer durante o transporte dos produtos importados;

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2022

VII - prestar orientações aos serviços de saúde sobre uso e cuidados de conservação dos produtos importados, assim como aos pacientes sobre como notificar as queixas técnicas e eventos adversos a eles relacionados;

VIII - criar mecanismos para a realização do monitoramento pós-distribuição e pós-uso da vacina importada e para que os casos de queixas técnicas e eventos adversos identificados sejam informados à Anvisa, por meio dos sistemas de informação adotados;

IX - responsabilizar-se pelo recolhimento do produto importado quando determinado pela Anvisa ou quando houver indícios suficientes ou comprovação de desvio de qualidade, que possa representar risco à saúde;

X - informar aos pacientes de que a vacina para Covid-19 não possui registro e nem autorização temporária para uso emergencial, em caráter experimental, concedido pela ANVISA e que o referido produto apenas possui aprovação em agência regulatória sanitária estrangeira; e

XI - apresentar a documentação requerida ao Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da Resolução de Diretoria Colegiada - RDC nº 73, de 21 de outubro de 2008.

6.3 – Condicionantes para importação da vacina Sputnik V:

I – Todos os lotes a serem destinados ao Brasil devem ser provenientes das plantas produtivas inspecionadas pela Anvisa: Generium e Pharmstandard UfaVita;

II – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos certificados de análise da etapa de concentrado da vacina e do produto acabado, demonstrando a ausência de RCA;

III – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos laudos de esterilidade microbiológica;

IV – A vacina deverá ser utilizada apenas na imunização de indivíduos adultos ≥ 18 anos e < 60 anos;

V – A vacina não deverá ser utilizada em gestantes, puérperas, lactantes e indivíduos com comorbidades;

VI – Os lotes das vacinas importados somente poderão ser destinados ao uso após análise laboratorial e liberação pelo INCQS;

VII – O requerente deverá registrar a execução de todas as obrigações previstas na RDC nº 476/2021 e reforçadas neste Voto. Tais registros deverão ser apresentados à Anvisa sempre que solicitado;

VIII – O requerente deverá considerar no plano de imunização as ações necessárias para evitar os erros programáticos de trocas entre os dois componentes da vacina, devendo haver monitorização e ações contínuas para minimizar o risco e os danos;

IX – O requerente deverá adotar ações de mitigação de risco considerando as diferenças de informações e formatos entre as embalagens, rótulos e bulas originais em comparação com as diretrizes regulatórias nacionais;

X – O requerente deverá disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português. Destaca-se que todas as indicações, contraindicações e restrições de uso constantes neste Voto deverão estar refletidas no documento a ser disponibilizado;

XI – Todos os lotes da vacina a ser fornecida devem atender às condições aprovadas pela autoridade sanitária internacional;

XII – O requerente deverá distribuir e utilizar a vacina em condições controladas com condução de estudo de efetividade, com delineamento acordado com a Anvisa e executado conforme Boas Práticas Clínicas, de acordo com o sugerido pelo Ofício CIDSNE/PRESID n. 25/2021 de 25/05/2021;

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2023

XIII – Os eventos adversos graves devem ser comunicados à Anvisa em até 24 horas por meio do sistema VigiMed ou e-SUS Notifica. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

XIV – O requerente deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados de segurança e efetividade de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

XV – O requerente deverá acompanhar diariamente alertas internacionais de segurança da vacina Sputnik V emitidos pelos países que estão utilizando a vacina e comunicar imediatamente à Anvisa em caso de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

XVI – O requerente deverá compartilhar o mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas da Anvisa ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados;

XVII – A vacina deverá ser distribuída apenas a centros de vacinação vinculados aos Centros de Referência de Imunobiológicos Especiais (CRIEs);

XVIII – As seguintes contraindicações deverão ser consideradas na imunização: hipersensibilidade a qualquer dos componentes da fórmula, gravidez, uso por lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos meses, ter recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, antecedentes de qualquer vacinação nas 4 semanas anteriores à potencial data de vacinação, ter recebido imunoglobulinas ou hemoderivados há 3 meses antes da potencial vacinação, tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia (segunda dose da vacina);

XIX – O requerente deverá requerer dos fabricantes Generium e UfaVita a avaliação do processo fabril e a proposição de alguma medida adicional de mitigação do risco decorrente da ausência da validação da etapa de filtração esterilizante. Esses documentos deverão ser apresentados à Anvisa previamente ao Licenciamento de Importação (LI) e deverão ser analisados e concluídos como adequados pela área técnica previamente ao deferimento do LI;

XX – O requerente deverá apresentar o relatório final de validação do processo de fabricação do Insumo Farmacêutico Ativo Biológico ou declaração da Autoridade Russa de que verificou e aprovou tal documento;

XXI – O requerente deverá apresentar, para adequação das Práticas Asséptica s e Teste de Esterilidade da UfaVita, os registros dos treinamentos dos operadores bem com vídeos demonstrando a execução das atividades críticas nas áreas limpas, indicando que os procedimentos de trabalho foram efetivamente corrigidos e não representam risco de contaminação ao produto. Tais documentos podem ser apresentados diretamente à Anvisa para análise e aprovação previamente ao deferimento do LI ou por meio de declaração da Autoridade Russa de que os verificou e aprovou;

XXII – O requerente deverá apresentar os relatórios de validação de métodos analíticos para os testes de RCA, PCR para identidade dos adenovírus e Elisa para imunogenicidade em camundongos. Tais relatórios podem ser apresentados conjuntamente com a documentação a ser enviada ao INCQS.

Os condicionantes e responsabilidades aqui destacados deverão constar em Termo de Compromisso a ser celebrado entre a Agência Nacional de Vigilância Sanitária – ANVISA, representada pelo Diretor Presidente e pelos Diretores titulares das diretorias que supervisionam as áreas de registro de medicamentos, fiscalização e monitoramento, e respectivos Governadores e Secretários de Saúde, como requisito para o deferimento do Licenciamento de Importação (LI) da vacina.

6.4 – Voto: vacina Sputnik V

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2024

Antes de pronunciar meu voto, reforço que todas as responsabilidades e condicionantes vinculados a esta importação visam garantir, com o mínimo de segurança, o bem maior que aqui tutelamos, a saúde. Daí porque entendo ser IMPRESCINDÍVEL o cumprimento integral pelos requerentes de todos os aspectos aqui destacados.

O que entendo ser razoável e que não haveria quaisquer óbices à sua realização, tendo em vista que estou certo que, assim como nós, os Governadores e Secretários de Saúde estão, igualmente, preocupados com a proteção do cidadão.

Assim, convencido de que estamos dando cumprimento integral à Lei 9.782/99, ao estabelecer a adoção de responsabilidades e condicionantes para autorização da importação excepcional, para fins de distribuição e uso da vacina em condições controladas, ou seja, estamos promovendo a proteção da saúde da população, por intermédio do controle sanitário, além de estarmos cumprindo as disposições da Lei nº 14.124/21 e da RDC nº 476/21, **VOTO** pela aprovação dos pedidos sob exame de autorização para importação excepcional, para fins de distribuição e uso da vacina Sputnik V em condições controladas.

Não obstante, destaco que, para a presente importação, autorizada por força da Lei nº 14.124/21, os aspectos de qualidade, segurança e eficácia da vacina Sputnik V foram atestados por meio do registro concedido pela Autoridade Sanitária da Rússia. Portanto, não foram considerados os aspectos regulatórios ordinários aplicáveis pelas áreas técnicas desta Agência que asseguram a comprovação de qualidade, segurança e eficácia de vacinas para autorização de registro ou uso emergencial no Brasil.

Os requerentes deverão observar os aspectos técnicos contidos neste Voto, assim como as obrigações e os condicionantes destacados. Salienta-se que o descumprimento das disposições contidas na RDC nº 476/21 constitui infração sanitária, nos termos da Lei nº 6.437/77, sem prejuízo das responsabilidades civil, administrativa e penal cabíveis.

As áreas de fiscalização e monitoramento da Anvisa deverão monitorar o perfil de queixas técnicas e eventos adversos associados à vacina importada nos termos deste Voto e adotar as ações de controle, monitoramento e fiscalização sanitária pertinentes.

Destaca-se que, caso o pedido de uso emergencial em análise pela Anvisa ou pela OMS seja negado ou com base em informações provenientes do controle e do monitoramento do uso da vacina Sputnik V no Brasil, ou outras informações técnicas ou científicas que venham a ser de conhecimento desta Anvisa, a Agência poderá suspender a importação, distribuição e uso da vacina importada nos termos da RDC nº 476/21, além de outras medidas que entender cabíveis conforme legislação vigente.

Por fim, destaco que fica autorizada a importação excepcional e temporária dos seguintes quantitativos, correspondentes a doses para vacinação de 1% da população de cada estado, dentro dos cronogramas enviados para o mês de junho/2021: Bahia – 300.000 doses; Maranhão – 141.000 doses; Sergipe – 46.000 doses; Ceará – 183.000 doses; Pernambuco – 192.000 doses; Piauí – 66.000 doses. Justifica-se o referido percentual por se tratar de quantitativo reduzido de doses vacinais, o que, além de permitir o adequado monitoramento e ação imediata caso necessário, não inviabiliza o custo do processo de importação. Ademais, os dados obtidos a partir do uso desses quantitativos servirão de base para decisões vindouras da Agência frente a novas doses a serem importadas.

Após o uso do referido quantitativo, a Anvisa avaliará os dados de monitoramento do uso da vacina, a fim de subsidiar nova deliberação da Agência quanto aos próximos quantitativos a serem importados. Mantido o status probatório para análise de tais pedidos de importação da vacina Sputnik V, a Diretoria Colegiada da Anvisa deliberará sobre os próximos pedidos por meio de Circuito Deliberativo.

6.5 – Condicionantes para importação da vacina Covaxin:

I – Todos os lotes a serem destinados ao Brasil devem ter sido fabricados após as adequações de Boas Práticas de Fabricação (BPF) implementadas pelo fabricante Bharat Biotech, conforme relatório CAPA apresentado à Anvisa;

II – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos certificados de análise atestando a realização de teste de potência;

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2025

III – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos laudos de esterilidade microbiológica;

IV – A vacina deverá ser utilizada apenas na imunização de indivíduos adultos ≥ 18 anos e < 60 anos;

V – A vacina não deverá ser utilizada em gestantes, puérperas, lactantes e indivíduos com comorbidades;

VI – Os lotes das vacinas importados somente poderão ser destinados ao uso após análise laboratorial e liberação pelo INCQS;

VII – O requerente deverá registrar a execução de todas as obrigações previstas na RDC nº 476/2021 e reforçadas neste Voto. Tais registros deverão ser apresentados à Anvisa sempre que solicitado;

VIII – O requerente deverá adotar ações de mitigação de risco considerando as diferenças de informações e formatos entre as embalagens, rótulos e bulas originais em comparação com as diretrizes regulatórias nacionais;

X – O requerente deverá disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português. Destaca-se que todas as indicações, contraindicações e restrições de uso constantes neste Voto deverão estar refletidas no documento a ser disponibilizado;

XI – Todos os lotes da vacina a serem fornecidos devem atender às condições aprovadas pela autoridade sanitária internacional;

XII – Os eventos adversos graves devem ser comunicados à Anvisa em até 24 horas por meio do sistema VigiMed ou e-SUS Notifica. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

XIII – O requerente deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados provenientes do monitoramento ativo do uso da vacina, com conclusão sobre segurança e efetividade de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

XIV – O requerente deverá acompanhar diariamente alertas internacionais de segurança da vacina Covaxin emitidos pelos países que estão utilizando a vacina e comunicar imediatamente à Anvisa em caso de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

XV – O requerente deverá compartilhar o mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas da Anvisa ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados;

XVI – O requerente deverá apresentar periodicamente à Anvisa os dados de estabilidade da vacina na medida em que forem sendo obtidos;

XVII – O requerente deverá apresentar à Anvisa o relatório completo do estudo de fase 3 assim que disponível;

XIII – O requerente deverá monitorar ativamente os eventos adversos de interesse especial, principalmente aqueles com potencial de serem induzidos pelo uso do novo adjuvante, como reações autoimunes;

XIX – A vacina só poderá ser utilizada no Brasil após entrega e avaliação pela Anvisa dos dados referentes a dois meses de acompanhamento de segurança do estudo clínico de fase 3;

XX – A vacina deverá ser distribuída apenas a centros de vacinação vinculados aos Centros de Referência de Imunobiológicos Especiais (CRIEs);

XXI – As seguintes contraindicações deverão ser consideradas na imunização: hipersensibilidade a qualquer dos componentes da fórmula, gravidez, uso por lactantes, menores de 18

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2026

anos, mulheres em idade fértil que desejam engravidar nos próximos meses, ter recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, antecedentes de qualquer vacinação nas 4 semanas anteriores à potencial data de vacinação, ter recebido imunoglobulinas ou hemoderivados há 3 meses antes da potencial vacinação, tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas), antecedentes de anafilaxia (segunda dose da vacina).

Os condicionantes e responsabilidades aqui destacados deverão constar em Termo de Compromisso a ser celebrado entre a Agência Nacional de Vigilância Sanitária – ANVISA, representada pelo Diretor Presidente e pelos Diretores titulares das diretorias que supervisionam as áreas de registro de medicamentos, fiscalização e monitoramento, e o Ministro da Saúde, como requisito para o deferimento do Licenciamento de Importação (LI) da vacina.

6.6 – Voto: vacina Covaxin

Antes de pronunciar meu voto, reforço que todas as responsabilidades e condicionantes vinculados a esta importação visam garantir, com o mínimo de segurança, o bem maior que aqui tutelamos, a saúde. Daí porque entendo ser IMPRESCINDÍVEL o cumprimento integral pelo importador de todos os aspectos aqui destacados.

O que entendo ser razoável e que não haveria quaisquer óbices à sua realização, tendo em vista que estou certo que, assim como nós, o Ministério da Saúde está, igualmente, preocupado com a proteção do cidadão.

Convencido de que estamos dando cumprimento integral à Lei 9.782/99, ao estabelecer a adoção de condicionantes para autorização da importação excepcional, para fins de distribuição e uso da vacina em condições controladas, ou seja, estamos promovendo a proteção da saúde da população, por intermédio do controle sanitário, além da superação dos aspectos que levaram ao indeferimento do pedido anterior de importação excepcional da vacina Covaxin pelo Ministério da Saúde, especialmente no que se refere à anuência para condução de estudo clínico no Brasil e à adequação dos aspectos das Boas Práticas de Fabricação, **VOTO** pela aprovação do pedido sob exame de autorização para importação excepcional, para fins de distribuição e uso da vacina Covaxin em condições controladas.

Não obstante, destaco que, para a presente importação, autorizada por força da Lei nº 14.124/2021, os aspectos de qualidade, segurança e eficácia da vacina Covaxin foram atestados por meio da autorização de uso emergencial concedida pela Autoridade Sanitária da Índia. Portanto, não foram considerados os aspectos regulatórios ordinários aplicáveis pelas áreas técnicas desta Agência que asseguram a comprovação de qualidade, segurança e eficácia de vacinas para autorização de registro ou uso emergencial no Brasil.

O deferimento da Licença de Importação (LI) ficará condicionado à avaliação pela Anvisa da validação do ensaio de quantificação de antígeno (proteína S) para o IFA e determinação da potência (imunogenicidade em camundongos) para a vacina (produto terminado).

O importador deverá observar os aspectos técnicos contidos neste Voto, assim como as obrigações e os condicionantes destacados. Salienta-se que o descumprimento das disposições contidas na RDC nº 476/21 constitui infração sanitária, nos termos da Lei n. 6.437, de 20 de agosto de 1977, sem prejuízo das responsabilidades civil, administrativa e penal cabíveis.

As áreas de fiscalização e monitoramento da Anvisa deverão monitorar o perfil de queixas técnicas e eventos adversos associados à vacina importada nos termos deste Voto e adotar as ações de controle, monitoramento e fiscalização sanitária pertinentes.

Destaca-se que, caso ocorra negativa quanto a eventual pedido de uso emergencial da vacina pela Anvisa ou pela OMS, ou com base em informações provenientes do controle e do monitoramento do uso da vacina Covaxin no Brasil, ou outras informações técnicas ou científicas que venham a ser de conhecimento desta Anvisa, a Agência poderá suspender a importação, distribuição e

Mensagem Parte 11 (0021610077) SEI 25000.100536/2021-987 pg. 2027

uso da vacina importada nos termos da RDC nº 476/21, além de outras medidas que entender cabíveis conforme legislação vigente.

Por fim, destaco que fica autorizada a importação excepcional e temporária do seguinte quantitativo, correspondente a doses para imunização de 1% da população nacional, dentro do cronograma enviado pelo Ministério da Saúde: 4.000.000 doses. Nesse sentido, o Ministério deverá avaliar a necessidade de reserva do quantitativo necessário para aplicação da 2ª dose da vacina. Justifica-se o referido percentual por se tratar de quantitativo reduzido de doses vacinais, o que, além de permitir o adequado monitoramento e ação imediata caso necessário, não inviabiliza o custo do processo de importação. Ademais, os dados obtidos a partir do uso desse quantitativo servirão de base para decisões vindouras da Agência frente a novas doses a serem importadas.

Após o uso do referido quantitativo, a Anvisa avaliará os dados de monitoramento do uso da vacina, a fim de subsidiar nova deliberação da Agência quanto aos próximos quantitativos a serem importados. Mantido o status probatório para análise de tais pedidos de importação da vacina Covaxin, a Diretoria Colegiada da Anvisa deliberará sobre os próximos pedidos por meio de Circuito Deliberativo.

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Summary information on the final lots

Name and Address of Manufacturer	Bharat Biotech International Limited, Genome Valley, Shameerpet (M), Medchal District - 500 078, Telangana, India.
Generic Name	Whole Virion, Inactivated Corona Virus Vaccine
Manufacturing License No	03/HD/AP/98/V/R
Licensed Brand Name	Whole Virion, Inactivated Corona Virus Vaccine
Strain of the virus seed	SARS-CoV-2 Virus strains
Name of the substrate used for production	Vero Cells
Nature of the Finished Product	Adjuvanted Vaccine
Batch No.	37F21046A
Date of Manufacture	04/21
Date of Expiry	09/21
No. of Filled Units for Release	41130
Recommended Storage Temperature	2°C to 8°C
Adjuvant used	ALGEL IMDG
Preservative used	2 Phenoxyethanol
Volume of the vaccine in each	5.0 mL in 5.0 mL Vial
Potency of the Vaccine	7.2 µg/SHD
Dose Size	0.5 mL
No. of Doses per Unit	10 doses
Shelf-life approved(months)	6 Months
Specimen copy of the Label	

Signature/Date: Vijaya 10/05/2021

Name: N. VIJAYA LAKSHMI

Department: Quality Assurance

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Cell Seed (MCB)	
Name and identification of cell strain	Vero MCB P/N : BHAMC 1 . FP, L/N:3006-104986
History of origin of cell strain	ATCC USA, Vero ATCC CCL -81 Lot F-11497.
Source of cell strain	Prepared and characterized at BioReliance
Date of procurement	25-03-04 procured from BioReliance Rockville, MD,USA
No.of bottle/ vials procured	25x1 mL
Passage level of cells	P # 133
Storage conditions	Liquid Nitrogen gaseous phase
Authority that approved cell seed	National Regulatory Authority, India IP
Manufacturer's Working Cell Bank (MWCB)	
Lot number	60120001A
Date approved	Permission obtained under post approval change on 05/04/2019 by DCG(I) vide letter No.6F.N-12-78/BBIL-PAC-vero Bank/17-BD
Date MWCB was established	31/03/2020
Total number of CryoUnits stored	750
Passage level of MWCB	P#138
Maximum passage approved for MWCB	P#159
Storage conditions	In vapour phase of Liquid Nitrogen

Identity test:

Specification	Should show 222 bp band after PCR amplification in Gel Analysis for AGMK species
Method	PCR method
Date of Test	15/05/2020
Date of completion	16/05/2020
Result	222 bp band observed

Adventitious agents
Method :In vivo method
Test in suckling mice:

Specification	Should be free from Adventitious agents.
Number of animals tested	30
Wt. range	Less than 0- 24 hrs old
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.1mL through I/P and 0.01mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Test in adult mice:

Number of animals tested	20
Wt. range	15-20 gms.
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.5mL through I/P and 0.03mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Results	Free from Adventitious agents

Test in guinea pigs:

Number of animals tested	10
Wt. range	350 - 500 gms
Route of inoculation	IP/IC
Quantity injected	1 x 10^7 cells /route 5.0mL through I/P and 0.1mL through I/C
Date of inoculation	19/05/2020
Date of completion	30/06/2020
Observation period	42 days
Results	Free from Adventitious agents

Test in rabbits:

Number of animals tested	10
Wt. range	1.5 – 2.5 kgs
Route of inoculation	I/D, S/C
Quantity injected	1 x 10^7 cells /route 1.0 mL through I/D and 5.0mL through S/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

Test in embryonated eggs:

Method	In-vivo method (Embryonated chicken eggs (5-7 days & 9-11 days old)
Date of test	02/07/2020
Date of completion	16/07/2020
Qty. Inoculated	1 x10^6 cells /route 1.0mL through allantoic cavity and 1.0mL through Yolk sac)
No. of eggs	20
Observation period	14 days
Result	Free from Adventitious agents

Adventitious agents:
In-vitro method:

Method	3 Indicator Cell lines (Vero cells, MRC-5 & Hep 2C cells)
Specification	Free from Adventitious agent
Qty. inoculated	1 x 10^7 cells in 10 mL/cell line
Date of test	22/05/2020
Date of completion	05/06/2020
Observation period	14 days
Result	Free from Adventitious agents

Mycoplasma Test

Method	PCR method
Specification	Should be Negative for Mycoplasma species
Date of test	15/07/2020
Date of Completion	16/07/2020
Observation period	1 day
Result	Negative for Mycoplasma species

Sterility test

Method	Direct Inoculation
Specification	No Growth should be observed
Date of test	15/04/2020
Date of completion	29/04/2020
Observation period	14 days
Result	No Growth observed (sterile)

Haemadsorption test

Method	Guinea Pig RBCs method
Specification	Should be free from Heamadsorbing viruses.
Date of test	04/05/2020
Date of completion	04/05/2020
Observation period	1 day
Result	Free from Heamadsorbing viruses

Growth Characteristics

Method	Subculture method.
Specification	Cells should be healthy and growing
Date of test	24/04/2020
Date of completion	28/04/2020
Observation period	4 days
Result	Cells are healthy and growing

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Name and History of Seed Strain	SARS-CoV-2 Virus seed
Origin of strain	ICMR-National Institute of Virology, Pune, India
Reference No.	SARS-CoV-2 Virus (NIV 2020-770)
Date of procurement	30/04/2020
Titre	$10^{6.5}$ $CCID_{50}$/mL
Passage Level	P#3

Master Seed Lot: (MVB)

Date of preparation of Master Seed Lot	12/05/2020
Titre of Master Seed	$10^{6.25}$ $CCID_{50}$/mL
Batch No.	37020001A
Quantity prepared	400 x 1 mL
Storage	-70 ± 5°C
Passage Level	P#5

Working Seed Lot

Date of preparation	17/05/2020
Quantity prepared	Each 26 mL x 790 PP bottle
Batch No.	37120001A
Passage level	P#6
No. of passage between Master Seed and Working Seed Lot	One
Storage	-70 ± 5°C

Tests on Master Seed Lot:

Identity test

By In-vitro method:

Method	qPCR Method
Specification	Virus titration by qPCR serve as an identity test
Date of test	13/05/2020
Date of completion	13/05/2020
Results	Complies

Sterility

Method	Direct inoculation
Specification	No growth should be observed
Date of test	19/05/2020
Date of Completion	02/06/2020
Observation period	14 days
Result	No growth observed

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Mycoplasma

Method	PCR Method
Specification	Should be Negative for Mycoplasma species
Date of test	18/05/2020
Date of completion	19/05/2020
Results	Negative for Mycoplasma species

Virus titration (In-vitro)

Method	In-vitro by CPE method
Specification	NLT $10^{6.00}$ $CCID_{50}$ per mL
Date of test	12/05/2020
Date of completion	19/05/2020
Results	$10^{6.25}$ $CCID_{50}$ per mL

Virus titration by qPCR

Method	qPCR Method
Specification	NLT $10^{6.00}$ Copies per mL
Date of test	13/05/2020
Date of completion	13/05/2020
Results	$10^{7.25}$ Copies per mL

Adventitious agents (In-vitro)

Method	(3 indicator cell line method) In-vitro
Specification	Should be free from Adventitious agents
Date of test	17/06/2020
Date of completion	01/07/2020
Results	Free from Adventitious agents

Heamadsorption

Method	Guinea pigs RBC method
Specification	Should be free from Haemadsorbing viruses
Date of test	01/07/2020
Date of completion	01/07/2020
Results	Free from Haemadsorbing viruses

Virus identity by NGS method

Method	NGS method
Specification	95% sequence should match with published sequence
Date of test	18/06/2020
Date of completion	29/06/2020
Results	100 % sequence matches with published sequence

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Preparation and control of batch

Working Virus strain used for production	: SARS-CoV-2 and bottle No. 141
Virus strain and inoculum seed used for production	: SARS-CoV-2 and bottle No. 02,59,67,75
Substrate used	: Vero Cells
Bioprocess Batch Number	: 37621025A
Type of culture	: Monolayer
Cell culture vessel used	: Bioreactor 2 X 50L (FBR-001 and FBR-002)
Total No. of cell stacks used for control	: 12xCS10
Date of infection	: 04/04/2021
Virus Titre ($CCID_{50}$/mL)	: $10^{6.88}CCID_{50}$/mL
Working Seed Titre (RT PCR)	: $10^{7.44}$ copies/mL
Total Cell count (FBR-001)	: 228000 x 10^6 cells
Total Cell count (FBR-002)	: 220000 x 10^6 cells
Volume of Virus Inoculum (FBR-001)	: 1502 mL
Volume of Virus Inoculum (FBR-002)	: 1450 mL
Multiplicity of Infection	: 0.05

Single virus harvests and purified bulk material :

No. of Harvests: 1

Viral Harvest	**VH I**
Date of harvesting	07/04/2021
Volume(L)	598.0 L

Test on Virus Harvest

Virus Titration (In-vitro)by CPE Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ $CCID_{50}$/mL
Date of test	23/04/2021
Date of completion	30/04/2021
Results	$10^{7.00}$ $CCID_{50}$/mL

Virus Titration by qPCR Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ copies/mL
Date of test	07/05/2021
Date of completion	07/05/2021
Results	$10^{7.29}$copies/mL

Sterility test for bacteria and fungi

Viral Harvest	**VH I**
Specification	No growth should be observed (Sterile)
Date of test	08/04/2021
Date of completion	22/04/2021
Results	:No growth observed (Sterile)

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Inactivation of Whole Virion Corona Virus Harvest

Inactivating agent used	BPL
Concentration	1:2500
Temperature	8±5°C
Incubation period	32 hrs

S.No	Batch Number	Date of inactivation	Date of completion
1	37621025A	07/04/2021	09/04/2021

Purification

Batch Number: 37621025A	Date of Concentration & Purification	Total volume used for purification
VH I	09/04/2021	664.0 L

Buffer exchange and Sterile Filtration of Inactivated SARS-CoV-2 Virus Bulk

Pool Batch No.	37621025A
No. of Inactivated bulk used for pooling	01 (VH I)
Date of pooling	07/04/2021
Specification of the Purified Inactivated Bulk	NLT 20 L
Final volume of the Purified Inactivated Bulk	39.40 L
Storage condition and shelf life	-70±5°C and To be established
Identification	
Specification	ELISA test and SDS PAGE serve as an identity test
Method	ELISA
Date of test	14/04/2021 and 16/04/2021
Date of completion	15/04/2021 and 16/04/2021
Result	Complies
Description	
Specification	Clear colourless, translucent liquid, free from particulate matter
Method	Visual Examination
Result	Clear colourless, translucent liquid, free from particulate matter
pH	
Method	Potentiometry
Specification	7.00-8.00
Date of test	12/04/2021
Result	7.54

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Sterility Test	
Method	Membrane filtration
Specification	No growth should be observed (Sterile)
Date of test	12/04/2021
Date of completion	26/04/2021
Result	No growth observed
Total Protein content	
Specification	NLT 15.00 µg/mL
Method	Lowry et al.
Date of test	12/04/2021
Result	154.83 µg/mL
Corona Virus Inactivation Test	
Specification	No CPE should be observed
Date of test	22/04/2021
Date of completion	29/04/2021
Result	No CPE observed
Corona Virus Amplification Test	
Specification	No residual live virus should be observed in Corona virus Amplification test
Date of inoculation into cell culture	12/04/2021
Cell strain inoculated	Vero cell
Date of 10th day Harvest collection	21/04/2021
Date of 15th day Harvest collection	26/04/2021
Result	No residual live virus observed
Residual cellular DNA content	
Specification	NMT 10.00 ng/SHD
Method	By Qubit Flurometry
Date of test	19/04/2021
Result	0.04 ng/SHD
Residual Bovine Serum Albumin content	
Specification	NMT 50.00 ng/SHD
Method	By ELISA
Date of test	16/04/2021
Result	5.27 ng/SHD
Antigenic Purity by SDS-PAGE	
Specification	Should show only Corona virus specific bands
Method	SDS-PAGE
Date of Test	16/04/2021
Result	Complies

Subject- Permission to manufacture of Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in Form CT-23 as per the provisions of New Drugs and Clinical Trials Rules, 2019 under Drugs & Cosmetics Act, 1940 - regarding.

Reference:

1. Permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002dated 03.01.2021.
2. Your letter nos. BBIL/RA/21/173, 177, 187 dated 06.03.2021, 08.03.2021 & 10.03.2021 submitted to this office vide email dated 06.03.2021, 08.03.2021 & 10.03.2021.

Sir,

This is with reference to the permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002 dated 03.01.2021 to manufacture Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode with various conditions.

In this regard, the interim safety and efficacy data of phase III clinical trial of Whole Virion, Inactivated Corona Virus Vaccine (BBV152) in the country submitted to this office was reviewed in consultation with SEC (COVID-19) committee on 08.03.2021 & 10.03.2021 respectively, wherein after detailed deliberation the committee recommended for omission of the condition of the use of the vaccine in clinical trial mode. However, the vaccine should be continued to be used under restricted use in emergency situation condition. Further, the ongoing phase III clinical trial should be continued as per the approved protocol. The firm should update the prescribing information and factsheet accordingly (under restricted use in emergency situation condition). All other conditions of the marketing authorisation shall continue to remain the same.

Accordingly, based on the recommendations of SEC, the condition "*This permission is for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode*" as mentioned in the said permission is amended to read as "*This permission is for restricted use in emergency situation in public interest*". However, you are required to continue ongoing Phase III clinical trial as per approved clinical trial protocol & submit revised summary of product characteristics (SmPC), Prescribing Information (PI) and Factsheet.

Yours faithfully,

(Dr. V. G. Somani)

Anexos: 37F21046A SLP.pdf; ANEXO_2_India EUL 12032021.pdf; PROFORMA INVOICE - BRAZIL_COVAXIN.pdf

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Emanuela Medrades

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Subject: ENC: Pedido de Registro de LI - Covaxin

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Boa tarde William

Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?

É uma doação ?

No aguardo das alterações.

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Summary information on the final lots

Name and Address of Manufacturer	Bharat Biotech International Limited, Genome Valley, Shameerpet (M), Medchal District - 500 078, Telangana, India.
Generic Name	Whole Virion, Inactivated Corona Virus Vaccine
Manufacturing License No	03/HD/AP/98/V/R
Licensed Brand Name	Whole Virion, Inactivated Corona Virus Vaccine
Strain of the virus seed	SARS-CoV-2 Virus strains
Name of the substrate used for production	Vero Cells
Nature of the Finished Product	Adjuvanted Vaccine
Batch No.	37F21046A
Date of Manufacture	04/21
Date of Expiry	09/21
No. of Filled Units for Release	41130
Recommended Storage Temperature	2°C to 8°C
Adjuvant used	ALGEL IMDG
Preservative used	2 Phenoxyethanol
Volume of the vaccine in each	5.0 mL in 5.0 mL Vial
Potency of the Vaccine	7.2 µg/SHD
Dose Size	0.5 mL
No. of Doses per Unit	10 doses
Shelf-life approved(months)	6 Months
Specimen copy of the Label	

Signature/Date: Vijaya 10/05/2021

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Cell Seed (MCB)	
Name and identification of cell strain	Vero MCB P/N : BHAMC 1 . FP, L/N:3006-104986
History of origin of cell strain	ATCC USA, Vero ATCC CCL -81 Lot F-11497.
Source of cell strain	Prepared and characterized at BioReliance
Date of procurement	25-03-04 procured from BioReliance Rockville, MD,USA
No.of bottle/ vials procured	25x1 mL
Passage level of cells	P # 133
Storage conditions	Liquid Nitrogen gaseous phase
Authority that approved cell seed	National Regulatory Authority, India IP
Manufacturer's Working Cell Bank (MWCB)	
Lot number	60120001A
Date approved	Permission obtained under post approval change on 05/04/2019 by DCG(I) vide letter No.6F.N-12-78/BBIL-PAC-vero Bank/17-BD
Date MWCB was established	31/03/2020
Total number of CryoUnits stored	750
Passage level of MWCB	P#138
Maximum passage approved for MWCB	P#159
Storage conditions	In vapour phase of Liquid Nitrogen

Identity test:

Specification	Should show 222 bp band after PCR amplification in Gel Analysis for AGMK species
Method	PCR method
Date of Test	15/05/2020
Date of completion	16/05/2020
Result	222 bp band observed

Adventitious agents
Method :In vivo method
Test in suckling mice:

Specification	Should be free from Adventitious agents.
Number of animals tested	30
Wt. range	Less than 0- 24 hrs old
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.1mL through I/P and 0.01mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Test in adult mice:

Number of animals tested	20
Wt. range	15-20 gms.
Route of inoculation	I/C, I/P
Quantity injected	1 x 10^7 cells /route 0.5mL through I/P and 0.03mL through I/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Results	Free from Adventitious agents

Test in guinea pigs:

Number of animals tested	10
Wt. range	350 - 500 gms
Route of inoculation	IP/IC
Quantity injected	1 x 10^7 cells /route 5.0mL through I/P and 0.1mL through I/C
Date of inoculation	19/05/2020
Date of completion	30/06/2020
Observation period	42 days
Results	Free from Adventitious agents

Test in rabbits:

Number of animals tested	10
Wt. range	1.5 – 2.5 kgs
Route of inoculation	I/D, S/C
Quantity injected	1 x 10^7 cells /route 1.0 mL through I/D and 5.0mL through S/C
Date of inoculation	19/05/2020
Date of completion	16/06/2020
Observation period	28 days
Result	Free from Adventitious agents

Test in embryonated eggs:

Method	In-vivo method (Embryonated chicken eggs (5-7 days & 9-11 days old)
Date of test	02/07/2020
Date of completion	16/07/2020
Qty. Inoculated	1 x10^6 cells /route 1.0mL through allantoic cavity and 1.0mL through Yolk sac)
No. of eggs	20
Observation period	14 days
Result	Free from Adventitious agents

Method	PCR method
Specification	Should be Negative for Mycoplasma species
Date of test	15/07/2020
Date of Completion	16/07/2020
Observation period	1 day
Result	Negative for Mycoplasma species

Sterility test

Method	Direct Inoculation
Specification	No Growth should be observed
Date of test	15/04/2020
Date of completion	29/04/2020
Observation period	14 days
Result	No Growth observed (sterile)

Haemadsorption test

Method	Guinea Pig RBCs method
Specification	Should be free from Heamadsorbing viruses.
Date of test	04/05/2020
Date of completion	04/05/2020
Observation period	1 day
Result	Free from Heamadsorbing viruses

Growth Characteristics

Method	Subculture method.
Specification	Cells should be healthy and growing
Date of test	24/04/2020
Date of completion	28/04/2020
Observation period	4 days
Result	Cells are healthy and growing

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Homogeneity Test

Method	Dye exclusion cell counting
Specification	90% to 110% recovery should be observed from initial cell count in each cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	102 %

Cell viability

Method	Dye exclusion method of cell counting
Specification	NLT 80%
Date of test	24/04/2020
Date of completion	24/04/2020
Result	99 %

Viable Cell Count

Method	Dye exclusion method of cell counting
Specification	NLT 5×10^6 Cells/Cryovials
Date of test	24/04/2020
Date of completion	24/04/2020
Result	5.2 $\times10^6$ Cells/Cryovial

Cell culture medium

Serum used in cell culture medium for WVS

Animal origin of serum	Fetal Bovine Serum
Vendor	Bovogen Biological Pvt. Ltd.
Catalog Number	SFBS-GI
Batch number	1710A
Expiration Date	Oct 2022

Trypsin used for preparation of cell cultures

Vendor	: Life Technologies
Catalog Number	:27250
Batch number	:2019024
Expiration Date	:Mar 2021

Control of source material

Animal serum used in SARS-CoV-2 Vaccine production

Type	NBCS – Gamma irradiated
Make / Origin	Bovogen/ Australia and New Zealand
Batch No./A.R.No:	RM-04-20-008

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Control of Source Material

Name and History of Seed Strain	SARS-CoV-2 Virus seed
Origin of strain	ICMR-National Institute of Virology, Pune, India
Reference No.	SARS-CoV-2 Virus (NIV 2020-770)
Date of procurement	30/04/2020
Titre	$10^{6.5}$ $CCID_{50}$/mL
Passage Level	P#3

Master Seed Lot: (MVB)

Date of preparation of Master Seed Lot	12/05/2020
Titre of Master Seed	$10^{6.25}$ $CCID_{50}$/mL
Batch No.	37020001A
Quantity prepared	400 x 1 mL
Storage	-70 ± 5°C
Passage Level	P#5

Working Seed Lot

Date of preparation	17/05/2020
Quantity prepared	Each 26 mL x 790 PP bottle
Batch No.	37120001A
Passage level	P#6
No. of passage between Master Seed and Working Seed Lot	One
Storage	-70 ± 5°C

Tests on Master Seed Lot:

Identity test

By In-vitro method:

Method	qPCR Method
Specification	Virus titration by qPCR serve as an identity test
Date of test	13/05/2020
Date of completion	13/05/2020
Results	Complies

Sterility

Method	Direct inoculation
Specification	No growth should be observed
Date of test	19/05/2020
Date of Completion	02/06/2020
Observation period	14 days
Result	No growth observed

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Preparation and control of batch

Working Virus strain used for production	: SARS-CoV-2 and bottle No. 141
Virus strain and inoculum seed used for production	: SARS-CoV-2 and bottle No. 02,59,67,75
Substrate used	: Vero Cells
Bioprocess Batch Number	: 37621025A
Type of culture	: Monolayer
Cell culture vessel used	: Bioreactor 2 X 50L (FBR-001 and FBR-002)
Total No. of cell stacks used for control	: 12xCS10
Date of infection	: 04/04/2021
Virus Titre ($CCID_{50}$/mL)	: $10^{6.88}CCID_{50}$/mL
Working Seed Titre (RT PCR)	: $10^{7.44}$ copies/mL
Total Cell count (FBR-001)	: 228000 x 10^6 cells
Total Cell count (FBR-002)	: 220000 x 10^6 cells
Volume of Virus Inoculum (FBR-001)	: 1502 mL
Volume of Virus Inoculum (FBR-002)	: 1450 mL
Multiplicity of Infection	: 0.05

Single virus harvests and purified bulk material :

No. of Harvests: 1

Viral Harvest	**VH I**
Date of harvesting	07/04/2021
Volume(L)	598.0 L

Test on Virus Harvest

Virus Titration (In-vitro)by CPE Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ $CCID_{50}$/mL
Date of test	23/04/2021
Date of completion	30/04/2021
Results	$10^{7.00}$ $CCID_{50}$/mL

Virus Titration by qPCR Method

Viral Harvest	**VH I**
Specification	Should not be less than NLT$10^{4.00}$ copies/mL
Date of test	07/05/2021
Date of completion	07/05/2021
Results	$10^{7.29}$copies/mL

Sterility test for bacteria and fungi

Viral Harvest	**VH I**
Specification	No growth should be observed (Sterile)
Date of test	08/04/2021
Date of completion	22/04/2021
Results	:No growth observed (Sterile)

SUMMARY LOT PROTOCOL OF WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE

Inactivation of Whole Virion Corona Virus Harvest

Inactivating agent used	BPL
Concentration	1:2500
Temperature	8±5°C
Incubation period	32 hrs

S.No	Batch Number	Date of inactivation	Date of completion
1	37621025A	07/04/2021	09/04/2021

Purification

Batch Number: 37621025A	Date of Concentration & Purification	Total volume used for purification
VH I	09/04/2021	664.0 L

Buffer exchange and Sterile Filtration of Inactivated SARS-CoV-2 Virus Bulk

Pool Batch No.	37621025A
No. of Inactivated bulk used for pooling	01 (VH I)
Date of pooling	07/04/2021
Specification of the Purified Inactivated Bulk	NLT 20 L
Final volume of the Purified Inactivated Bulk	39.40 L
Storage condition and shelf life	-70±5°C and To be established
Identification	
Specification	ELISA test and SDS PAGE serve as an identity test
Method	ELISA
Date of test	14/04/2021 and 16/04/2021
Date of completion	15/04/2021 and 16/04/2021
Result	Complies
Description	
Specification	Clear colourless, translucent liquid, free from particulate matter
Method	Visual Examination
Result	Clear colourless, translucent liquid, free from particulate matter
pH	
Method	Potentiometry
Specification	7.00-8.00
Date of test	12/04/2021
Result	7.54

Sterility Test	
Method	Membrane filtration
Specification	No growth should be observed (Sterile)
Date of test	12/04/2021
Date of completion	26/04/2021
Result	No growth observed
Total Protein content	
Specification	NLT 15.00 µg/mL
Method	Lowry et al.
Date of test	12/04/2021
Result	154.83 µg/mL
Corona Virus Inactivation Test	
Specification	No CPE should be observed
Date of test	22/04/2021
Date of completion	29/04/2021
Result	No CPE observed
Corona Virus Amplification Test	
Specification	No residual live virus should be observed in Corona virus Amplification test
Date of inoculation into cell culture	12/04/2021
Cell strain inoculated	Vero cell
Date of 10th day Harvest collection	21/04/2021
Date of 15th day Harvest collection	26/04/2021
Result	No residual live virus observed
Residual cellular DNA content	
Specification	NMT 10.00 ng/SHD
Method	By Qubit Flurometry
Date of test	19/04/2021
Result	0.04 ng/SHD
Residual Bovine Serum Albumin content	
Specification	NMT 50.00 ng/SHD
Method	By ELISA
Date of test	16/04/2021
Result	5.27 ng/SHD
Antigenic Purity by SDS-PAGE	
Specification	Should show only Corona virus specific bands
Method	SDS-PAGE
Date of Test	16/04/2021
Result	Complies

CERTIFICATE OF ANALYSIS

Product : **WHOLE VIRION, INACTIVATED CORONA VIRUS VACCINE, [BBV 152] (HUMAN, ADSORBED) - FINAL BULK**

Batch Number : 37F21046A
Batch size : 250 L
Mfg. date : 04/21
Exp. Date : NA
Specification No. : FPS307

A.R. Number : FB-37-21-051
Date of receipt : 22/04/2021
Qty. sampled : 52 mL
Batch Release Date : 10/05/2021

TESTS	SPECIFICATIONS	RESULTS
Description	White to off white opalescent suspension , free from extraneous particles	White opalescent suspension , free from extraneous particles
Identification	Should comply with identification test performed on finished product	Complies
pH	7.00 - 8.00	7.37
Aluminium Content	NLT 0.38 mg/mL and NMT 0.58 mg/mL	0.47 mg/mL
Sterility	No growth should be observed(Sterile)	No growth observed
Protein adsorption test	NLT 75%	100 %
2-Phenoxy ethanol content	NLT 85.0% and NMT 115.0% of the stated label claim	99.8 %
Bacterial Endotoxins	Less than 25 International units (IU) per Single Human Dose (SHD)	< 12.5 IU/SHD

OPINION: Sample COMPLIES/~~DOES NOT COMP~~LY as per specification No.: FPS307

Subject- Permission to manufacture of Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in Form CT-23 as per the provisions of New Drugs and Clinical Trials Rules, 2019 under Drugs & Cosmetics Act, 1940 - regarding.

Reference:

1. Permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002dated 03.01.2021.
2. Your letter nos. BBIL/RA/21/173, 177, 187 dated 06.03.2021, 08.03.2021 & 10.03.2021 submitted to this office vide email dated 06.03.2021, 08.03.2021 & 10.03.2021.

Sir,

This is with reference to the permission granted by this Directorate in Form CT-23 vide no. MF/BIO/21/000002 dated 03.01.2021 to manufacture Whole-virion Inactivated SARS-CoV-2 Vaccine (BBV152) for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode with various conditions.

In this regard, the interim safety and efficacy data of phase III clinical trial of Whole Virion, Inactivated Corona Virus Vaccine (BBV152) in the country submitted to this office was reviewed in consultation with SEC (COVID-19) committee on 08.03.2021 & 10.03.2021 respectively, wherein after detailed deliberation the committee recommended for omission of the condition of the use of the vaccine in clinical trial mode. However, the vaccine should be continued to be used under restricted use in emergency situation condition. Further, the ongoing phase III clinical trial should be continued as per the approved protocol. The firm should update the prescribing information and factsheet accordingly (under restricted use in emergency situation condition). All other conditions of the marketing authorisation shall continue to remain the same.

Accordingly, based on the recommendations of SEC, the condition "*This permission is for restricted use in emergency situation in public interest use in as an abundant precaution, in clinical trial mode*" as mentioned in the said permission is amended to read as "*This permission is for restricted use in emergency situation in public interest*". However, you are required to continue ongoing Phase III clinical trial as per approved clinical trial protocol & submit revised summary of product characteristics (SmPC), Prescribing Information (PI) and Factsheet.

Yours faithfully,

(Dr. V. G. Somani)
Drugs Controller General (India)

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Emanuela Medrades

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: Re: Solicitação de documentos para pedido, junto a ANVISA, de concessão de excepcionalidade para importação da Vacina COVAXIN.

Ariadne, boa tarde.

Por gentileza, confirma havíamos combinado com a Daniela, estamos respondendo a Parte I dos questionamentos referentes aos estudos clínicos da Índia enviados pela GGMED.

Documentos:

1. Clinical Responses – Parte I;

2. Mock Shell Version 1.0

3. BBV152 SAP

4. Development and Licensure for Covid19 – FDA.

5. Case Report Form – CRF

6. Diário do Participante

7. ICD

8. Questionário FUP Telefone

Atenciosamente,

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados. O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Maria Aparecida Affonso Boller

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Boa tarde Emanuela, tudo bem?

Gostaria que você compartilhasse conosco as atualizações quanto aos documentos solicitados ou outros encaminhamentos que tenham feito.

Faço esse pedido pois a equipe interna precisará analisar os POPs, estabelecer aqueles que poderão ser internalizados e os que necessitarão de compra de insumos.

Atenciosamente,

Bom dia Emanuela,

Infelizmente essas situações acontecem mas nos colocamos à disposição para resolvermos e entendemos a urgência das respostas face ao cenário da pandemia.

Entretanto, devido a nova situação de análises laboratoriais como condicionante pela ANVISA, precisaremos de todos os Procedimentos Operacionais e seus respectivos Relatórios de

Validação, nos ensaios realizados no produto final, para avaliação da internalização dos procedimentos.

Sobre os documentos do Ensaio de Potência enviados ontem, a equipe responsável fez uma avaliação mas necessitará de mais informações, que seguem descritas na tabela abaixo:

Solicitação dos Procedimentos do Ensaio de Potência		
Nº documento	**Título documento**	**Observações**
STP/QCV/135	Potency test (Biological Assay) whole virion Inativacted Corona Virus vaccine by serm neutralization method	Esse POP está no anexo 71, mas não menciona a linhagem de camundongo utilizada no ensaio de potência. Já tem uma versão atualizada do POP?
STP/QCC/072	In vivo Potency of SARS CoV2 vaccine and detection of antibodies by ELISA method	
SP/37/20/01	Plaque Reduction Neutralization Test at 50% or 90% Against SARS CoV2 virus

Caro Ozéias, bom dia.

Uma pena que tivemos esse contratempo, como eu havia recebido a confirmação de entrega do e-mail acabei nem conferindo com vocês.

Honestamente, estamos tentando entender a melhor alternativa a ser seguida após a decisão da ANVISA de solicitar a análise laboratorial por parte do INCQS, pois conforme conversado com a Cida ontem, para o teste de potência será necessário no mínimo 28 dias para execução do ensaio, seguido de mais alguns dias para análise e elaboração do report. E vale ressaltar também que os testes deverão realizados in vivo, conforme método compartilhado.

De qualquer forma, precisamos da orientação do Instituto quanto a quantidade de amostras para realização dos ensaios, além de precisar entender se estamos falando da quantificação de antígeno e Potência ou se irão realizar os ensaios listados no CoA para liberação dos lotes.

Aguardo retorno,

Atenciosamente,

Caro Ozeias, boa tarde.

Gostaria de saber se possuem algum retorno quanto aos métodos de Potência e quantificação de antígeno ?

Estamos encerrando a justificativa quanto a quantidade máxima de Proteínas, entretanto, tal informação é referente ao Bulk e não ao produto acabado. A Biocarga e demais fatores que acabam tendo oscilações durante a liberação do Bulk mas são estabilizados para liberação do produto acabado.

Caro Ozéias, bom dia.

Gostaria de compartilhar, em complementação as respostas enviadas anteriormente, os seguintes arquivos e suas descrições:

Conteúdo antigênico

Anexo 67 – Assay Validation for estimation of **S1 protein** in Bulk by ELISA – Protocolo de validação de método
Anexo 68 – Assay Validation for estimation of **S1 protein** in Bulk by ELISA – Relatório de validação de método

Potência

Anexo 71 – Assay Validation for estimation of potency by measuring SARS-CoV-2 specific antibody or neutralizing antibody titre – Protocolo de validação de método.
Anexo 72 – Assay Validation for estimation of potency by measuring SARS-CoV-2 specific antibody or neutralizing antibody titre – Relatório de validação de método.

Com isso, informo que teremos ajustes no SLP e CoA quanto a estes dois itens.

Ainda sobre o limite máximo de conteúdo de proteínas totais nos retornarão até amanhã com a justificativa e maiores detalhes.

Permanecemos a disposição,

Subject: Re: Reunião GELAS, INCQS e Precisa - Vacina COVAXIN Bharat Biotech Protocolo INCQS 1300/2021

Caro Ozéias, bom dia.

Obrigada pelo retorno. Seguem meus comentários a seguir em vermelho.

1) As informações referentes ao **Ensaio de Esterilidade** da vacina Covaxin contidas no documento enviado pela Bharat Biotech estão adequadas para a análise de protocolo do referido ensaio.
Ciente, obrigada.

2) Os ensaios físico-químicos compendiais (**pH, Conteúdo de Alumínio, Osmolalidade**) estão descritos de modo adequado à análise de protocolo.
Ciente, obrigada.

3) No ensaio **Volume Extraível** é utilizado o método de Medida em Cilindro Graduado, ressaltamos que a Farmacopeia Brasileira alterou a metodologia para gravimetria. Entretanto, a manutenção do excesso de volume proposto não deve provocar resultados fora de especificação.
Vamos estudar um risk assessment e podemos inserir um Change Control. Mas para os primeiros lotes que virão, o método realmente será de Medida em Cilindro Graduado.

4) Para facilitar a rastreabilidade, sugerimos a inclusão de uma árvore genealógica (fluxograma de produção) no protocolo, com os números dos lotes utilizados/gerados ao longo da produção (por exemplo, working cell bank, working virus seed, bulk, bulk purificado, bulk final e produto).
Faremos isto.

5) Sobre o **Ensaio de Potência**, vários analistas expressaram dúvidas que transcrevo logo abaixo:

a) O produtor já definiu qual será o teste de potência a ser realizado?

A potência já está sendo realizada através de ELISA ou PRNT50 ou MNT50. Ontem as validações foram concluídas ontem e os dados estão sendo compilados e os relatórios serão apresentados nos próximos dias. A definição de quais testes serão aplicadas as próximas liberações de lote, se dará após a validação.

Assim que tivermos este concluído, iremos disponibilizar o SOP.

b) Na página 2/26, foi estabelecida uma potência de 7,2ug/dose. Qual ensaio foi realizado para chegar nesse valor?

Vide 5 a.

c) Em que(quais) etapa(s) da produção o teste é realizado? Qual a especificação para esse ensaio na(s) etapa(s)?

Vide 5 a.

d) Poderiam disponibilizar o POP desse ensaio de potência?

Vide 5 a.

6) Não foi identificado no documento a determinação da **Potência** ou **Conteúdo antigênico**, poderia esclarecer se o teste será feito ou se haverá substituição por outro? Qual a metodologia a ser utilizada?

Vide 5 a.

7) Foi observado que o teste **Conteúdo de Proteínas Totais** (Método Lowry) apresenta apenas valor para mínimo (NLT 15µg/mL). Há dúvidas neste ensaio quanto ao valor máximo admitido, assim, poderiam nos enviar um esclarecimento (justificativa) quanto aos valores limites deste teste?

Estamos aguardando o QA enviar a justificativa e retornaremos também nos próximos dias.

Prezada Emanuela,

Após avaliarmos o documento enviado, fizemos algumas observações e questionamentos de modo a podermos alinhar e consolidar informações necessárias às futuras avaliações do PRPCQ realizados pelo INCQS:

1) As informações referentes ao **Ensaio de Esterilidade** da vacina Covaxin contidas no documento enviado pela Bharat Biotech estão adequadas para a análise de protocolo do referido ensaio.

2) Os ensaios físico-químicos compendiais (**pH, Conteúdo de Alumínio, Osmolalidade**) estão descritos de modo adequado à análise de protocolo.

3) No ensaio **Volume Extraível** é utilizado o método de Medida em Cilindro Graduado, ressaltamos que a Farmacopeia Brasileira alterou a metodologia para gravimetria. Entretanto, a manutenção do excesso de volume proposto não deve provocar resultados fora de especificação.

4) Para facilitar a rastreabilidade, sugerimos a inclusão de uma árvore genealógica (fluxograma de produção) no protocolo, com os números dos lotes utilizados/gerados ao longo da produção (por exemplo, working cell bank, working virus seed, bulk, bulk purificado, bulk final e produto).

5) Sobre o **Ensaio de Potência**, vários analistas expressaram dúvidas que transcrevo logo abaixo:

a) O produtor já definiu qual será o teste de potência a ser realizado?

b) Na página 2/26, foi estabelecida uma potência de 7,2ug/dose. Qual ensaio foi realizado para chegar nesse valor?

c) Em que(quais) etapa(s) da produção o teste é realizado? Qual a especificação para esse ensaio na(s) etapa(s)?

d) Poderiam disponibilizar o POP desse ensaio de potência?

6) Não foi identificado no documento a determinação da **Potência** ou **Conteúdo antigênico**, poderia esclarecer se o teste será feito ou se haverá substituição por outro? Qual a metodologia a ser utilizada?

7) Foi observado que o teste **Conteúdo de Proteínas Totais** (Método Lowry) apresenta apenas valor para mínimo (NLT 15µg/mL). Há dúvidas neste ensaio quanto ao valor máximo admitido, assim, poderiam nos enviar um esclarecimento (justificativa) quanto aos valores limites deste teste?

Estamos à disposição para qualquer esclarecimento,

Cara Maria, bom dia.

Gostaríamos de compartilhar o SLP (Summary Log Protocol) que contém todas as informações relevantes, inclusive em acordo com os documentos de referência disponíveis em outras autoridades. (EDQM e OMS).

Este SLP já está na mesma apresentação que será disponibilizado para o BR e conforme ciência de todos, todos os testes de CQ que foram incluídos, terão sua validação encerrada até o próximo dia 15/05. Dessa forma, teremos algumas pequenas alterações no documento.

De qualquer forma, compartilho para que analisem se este é o suficiente, junto aos demais itens do Anexo II.

Prezada Sra. Graziela e Equipe Técnica,

Boa tarde.

Gostaríamos novamente de retomar nosso contato com vocês, referente às atualizações dos detalhes técnicos da vacina COVAXIN. O time regulatório da Precisa se encontra na Índia, por este motivo solicitamos por gentileza uma reunião para **quinta-feira dia 6 de maio às 10:00 am**.

Se esta data e horário não for conveniente para vocês, por favor enviar uma sugestão de data e horário.

Desde já agradecemos a atenção.

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nº 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Atenciosamente,

William Amorim Santana

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezado Everton,

Boa tarde!

Conversei com a Sra. Emanuela Medrades, que nos lê em cópia, tendo a mesma se comprometido a fazer o ajuste na INVOICE.

Ante ao exposto, segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI) com incoterm **"CIP".**

Informações complementares: CONTRATO 29/2021 - AQUISIÇÃO DA VACINA COVAXIN PARA ENFRENTAMENTO DA PANDEMIA DE COVID-19, PARA USO EMERGENCIAL CONFORME VOTO Nª 163/2021/DIRES/ANVISA. "AUTORIZADA CONFORME A LEI Nª 14.124/2021 E AUTORIZADA CONFORME A LEI 14.125/2021".

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezado Everton,

Boa tarde!

Conversei com a Sra. Emanuela Medrades, que nos lê em cópia, tendo a mesma se comprometido a fazer o ajuste na INVOICE.

Ante ao exposto, segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI) com incoterm **"CIP".**

Informações complementares: CONTRATO 29/2021 - AQUISIÇÃO DA VACINA COVAXIN PARA ENFRENTAMENTO DA PANDEMIA DE COVID-19, PARA USO EMERGENCIAL CONFORME VOTO Nª 163/2021/DIRES/ANVISA. "AUTORIZADA CONFORME A LEI Nª 14.124/2021 E AUTORIZADA CONFORME A LEI 14.125/2021".

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

William

Desculpe ! Esqueci de informar, está faltando:

- Nome e endereço completo do Fabricante

Lembrando que, é necessário o Lote com sua validade na LI, para a confecção do Termo de Guarda.

É uma doação ?

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Subject: ENC: Pedido de Registro de LI - Covaxin

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Cida, bom dia.

Fizemos um follow up junto a BBIL ontem e eles estão com algumas demandas da OMS e nos pediram até sexta-feira dessa semana para retornar com essa resposta.

Estamos insistindo em uma data mais célere. De qualquer forma, gostaria de confirmar se é realmente só uma observação que vocês possuem ou se existem mais pontos a detalhar.

Atenciosamente,

Emanuela Medrades

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados. O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Cordialmente,

Assunto: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Bom dia William

Fiquei na dúvida do INCOTERM, no proforma informa FCA é isso mesmo ? Ou é DAP ?

Última informação é trocar PROFORMA para INVOICE.

Assunto: Re: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIOTECH

William, boa tarde.

Segue PFI com as informações ajustadas (peso líquido e bruto), NCM entre outros.

Além disso, informo o lote 37F21046A liberado em maio/21, segundo SLP anexo com os certificados de análise constantes as últimas páginas.

Os lotes que serão enviados ao Brasil, serão escolhidos entre os lotes produzidos a partir de maio/21, para que exista tempo hábil para usufruir de sua validade de 6 meses.

Assim que a LI for registrada e compartilhada conosco, iremos organizar o lote e respectivo packing list para envio a vocês. Não temos autorização de inclusão do lote na LI pelo governo indiano, pois caso demore muito para liberação da autorização, este lote será destinado a utilização interna. Peço que verifique junto a Wegh se existe a possibilidade de seguirmos dessa forma, e assim que a LI for registrada podemos enviar as demais informações para o termo de guarda e responsabilidade. Mantendo sempre a validade e qualidade do produto intactas.

Compartilho também o comprovante de autorização de uso da vacina na índia conforme art. 15 da 476.

Permanecemos a disposição,

Atenciosamente,

[Uma imagem contendo guarda-chuva Descrição gerada automaticamente] [signature_631106945]

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

* Nome e endereço completo do Fabricante;
* Data de fabricação e vencimento;
* Número dos Lotes;

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nº 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.

Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-98 / pg. 2267

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Boa tarde Emanuela,

I
Reforço que, devido a nova situação de análises laboratoriais como condicionante pela ANVISA, precisaremos de todos os Procedimentos Operacionais e seus respectivos Relatórios de Validação, nos ensaios realizados no produto final, para avaliação da internalização dos procedimentos.

Sobre os documentos do Ensaio de Potência enviados, a equipe responsável fez uma avaliação, conforme mensagem trocada em 08/06/2021, mas necessitará de mais informações, que seguem descritas na tabela abaixo:

Solicitação dos Procedimentos do Ensaio de Potência		
Nº documento	**Título documento**	**Observações**
STP/QCV/135	Potency test (Biological Assay) whole virion Inativacted Corona Virus vaccine by serm neutralization method	Esse POP está no anexo 71, mas não menciona a linhagem de camundongo utilizada no ensaio de potência. Já tem uma versão atualizada do POP?
STP/QCC/072	In vivo Potency of SARS CoV2 vaccine and detection of antibodies by ELISA method	
SP/37/20/01	Plaque Reduction Neutralization Test at 50% or 90% Against SARS CoV2 virus	

Estamos no aguardo dos documentos solicitados e nos colocamos à disposição.

Atenciosamente,

Ozéias Leitão

Cida, bom dia.

Fizemos um follow up junto a BBIL ontem e eles estão com algumas demandas da OMS e nos pediram até sexta-feira dessa semana para retornar com essa resposta.

Estamos insistindo em uma data mais célere. De qualquer forma, gostaria de confirmar se é realmente só uma observação que vocês possuem ou se existem mais pontos a detalhar.

Atenciosamente,

Prezada Ariadne,

Apesar de o INCQS estar com grande demanda de trabalho, estamos conseguindo cumprir com os prazos acordados.
O histórico de nossas comunicações encontra-se no anexo dessa mensagem, que contém as mensagens eletrônicas trocadas entre o INCQS e a PRECISA.
Destaco que no dia 15/06/2021 solicitamos para a Emanuela uma atualização quanto às últimas demandas e não obtivemos resposta até o presente momento.
Estamos disposição para qualquer esclarecimento.

Prezada @Ariadne Gisele Muniz Bonvino boa tarde. Como vai? Espero que esteja bem!

Ariadne, a Dra. @Emanuela Medrades que nos lê em cópia, solicitou ao INCQS os procedimentos que devem ser adotados para o envio das doses/documentos para a análise da qualidade da vacina.

Provavelmente em virtude da alta demanda que o INCQS deve estar submetido, essa devolutiva ainda não nos foi encaminhada.

Seria possível que o Ministério da Saúde fizesse essa verificação quanto à solicitação que foi encaminhada?

Estou a disposição para mais esclarecimentos.

Assunto: RES: SOLICITAÇÃO - INCQS - CONTRATO 29/2021

Prezados, bom dia.

Ozéias, recebemos respostas da Bharat referente aos últimos questionamentos. Segue abaixo:

- STP/QCC/072 - Potência in vivo da vacina SARS CoV2 e detecção de anticorpos pelo método ELISA
- SP/37/20/01 - Teste de Neutralização de Redução de Placas em 50% ou 90% Contra o vírus SARS CoV2

Resposta: Os documentos STP/QCC/072, SP/37/20/01) não estão em uso devido à não disponibilidade de reagentes necessários para a validação do ensaio (mencionado no relatório de validação do método - AMVR/VP/37/12) que foi submetido à ANVISA. No lugar dos documentos citados acima, o teste de por MNT50% foi validado e o Procedimento Padrão de Teste (STP) para teste de potência (ensaio biológico) para vacina por método de neutralização (MNT50%) foi preparado para testes e lançamentos regulares em lote (Ref. STP/QCV/135 em anexo).

- Sobre a linhagem dos camundongos:

Resposta: A versão anterior do SOP 71 e o método de teste de potência (atividade biológica) foram revisados e ref. no STP/QCV/135 Rev No. 00 aprovado em 15/04/2021 (em anexo) e conforme método de teste revisado, informando a linhagem dos camundongos, que é Albino Suíço.

- Valor máximo admitido para o teor de proteína total:

Resposta: O controle de teor de proteínas em nível mínimo é apropriado e a formulação do lote está sendo feita com base no valor mínimo de concentração de proteínas conforme fórmula mestre, portanto, a especificação da substância medicamentosa foi fixada no nível mínimo, ou seja, NLT 15µg/ml.

Qualquer dúvida, nos mantemos à disposição.
Obrigada.

Fernanda, bom dia.

Em complemento as repostas enviadas ontem, compartilho os dados utilizados para apreciação, sendo:

1. **Collatect_PD_BBV152** – Referente aos desvios de protocolos de menor impacto, com sua descrição e ação corretiva/preventiva.
2. **Subjects_Visits_BBV152_STATUS2_Interim_report** – Fornecida pela equipe responsável pelo IWRS, onde é possível ver os 24.432 participantes que haviam recebido a primeira e segunda dose além de outras informações como screening number, gênero, idade, data de cada uma das visitas e status do participante. (*Enrolled, discontinued, unblided*...)
3. **DAY 42 Positive Cases_FEndpoint** – Informações disponibilizadas pelo IQVIA com os 127 casos de Covid19 Sintomáticos utilizados para o desfecho primário do estudo. No documento é fornecido as seguintes informações:

    - as datas da primeira e segunda dose,
    - data do follow-up de 42 dias,
    - os sintomas informados pelo participante,
    - a data do PCR positivo,

- Quantos dias após primeira e segunda dose,
- Informações clínicas como SpO2, exames de imagem e outros quando aplicável,
- Terapia medicamentosa para tratamento do Covid19, e
- Observação se o mesmo se enquadra no critério de Covid19 grave conforme Guideline do FDA.

Envio novamente o segundo relatório interino de fase 3 o qual essas informações se referem, para facilitar e permanecemos a disposição,

Atenciosamente,

Assunto: Re: Documentação prévia à submissão - Covaxin

Fernanda, boa tarde. Como vai ?

Como estamos tratando mais de um assunto ao mesmo tempo, as informações estão ficando um pouco sobrepostas. Abaixo separei por itens em atual tratativa junto a agência:

- Os documentos que foram enviados nessa pasta do OneDrive são referentes ao processo 25351455725202115 e Expediente Nº 1809912212 realizado no dia 11/05/21 com assunto 11800, para que a ANVISA possa analisar o documento de uma maneira formal. Esse protocolo foi feito para que após a análise de vocês, em a documentação estando de acordo, a Precisa possa dar continuidade no processo de pedido de importação excepcional através do Ministério da Saúde.

- Quanto ao DDCM, pedimos uma reunião junto a CONEP e gostaria de contar com a sua participação, bem como da Brenda e do Francis, para tratarmos das questões apresentadas no termo de compromisso. Hoje estaremos aditando o DDCM para inserir os detalhes das SAEs dos ensaios clínicos, a relação causal, inclusive dos óbitos conforme solicitado.

- E também, para manter todos na mesma página, teremos uma reunião amanhã com a GGFIS onde a BBIL irá apresentar todas as ações atendidas do CAPA para seguirmos com o Peticionamento do CBPF.

Apesar de ter resumido acima cada uma das atividades, iremos nos organizar sempre em e-mails separados para cada um, para uma melhor comunicação.

Permanecemos a disposição,

Bom dia, Amanda

Vc se refere à documentação do DDCM ou da submissão prévia à importação? Os links eram os mesmos?
Só para estarmos na mesma página, o que queríamos era que a empresa informasse qual documento enviado na submissão prévia à importação seria diferente ou com novas informações em comparação com o que foi encaminhado no DDCM.
Foi isso que a empresa disponibilizou?

Assunto: **Solicitação de autorização para importação em caráter Excepcional de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN**

Referência: Caso responda este Ofício, indicar expressamente o Processo nº 25351.915151/2021-48.

Senhor Secretário Executivo,

1. Cumprimentando-o cordialmente, faço referência ao Ofício nº 129/2021/DLOG/SE/MS, por meio do qual o Ministério da Saúde requer a importação em caráter excepcional de 20.000.000 (vinte milhões) de doses da vacina Covaxin / BBV152. Os documentos recebidos encontram-se em análise pela Agência, à luz da Lei nº 14.124/21 e RDC nº 476/21.

2. Nesse sentido, verifica-se que novos documentos foram acostados ao processo na data de hoje, 31/05, a saber: *Clinical Responses* – Parte I; *Mock Shell Version 1.0; BBV152 SAP; Development and Licensure for Covid19 – FDA; Case Report Form – CRF;* Diário do Participante; ICD; Questionário FUP Telefone. Tratam-se de documentos requeridos pelas áreas técnicas da Anvisa durante as tratativas relacionadas ao novo pedido de importação da vacina e que serão analisados com a brevidade que o caso requer.

3. Dessa forma, diante da juntada dos novos documentos ao processo e da necessidade de sua análise, não será possível a deliberação da Anvisa no prazo de 7 (sete) dias úteis previsto no § 1º do art. 16 da Lei nº 14.124/21.

4. Sem mais, a Anvisa coloca-se à disposição para eventuais esclarecimentos que se façam necessários.

Atenciosamente,

Documento assinado eletronicamente por **Karin Schuck Hemesath Mendes**, **Chefe de Gabinete**, em 31/05/2021, às 21:42, conforme horário oficial de Brasília, com fundamento no art. 6º, § 1º, do Decreto nº 8.539, de 8 de outubro de 2015 http://www.planalto.gov.br/ccivil_03/_Ato2015-2018/2015/Decreto/D8539.htm.

Anexos: PROFORMA INVOICE - BRAZIL.pdf

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Boechat, pode nos auxiliar nesta demanda da CNN Brasil sobre licença de importação Covaxin?

Veículo: CNN Brasil
Repórter: Leandro Resende
Pauta: Licença de importação da Covaxin
Deadline: Não informado

Demanda:
Uma delegação da Precisa Medicamentos está na Índia para ajudar na liberação das doses da Covaxin para o Brasil. Integrante me relatou que só falta a Licença de Importação, e que trata-se de trâmite burocrático que deve ser superado por atuação do Ministério da Saúde.

Podem me esclarecer sobre isso?

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.
Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).
No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para

ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Assunto: SOLICITAÇÃO DE AUTORIZAÇÃO DE EMBARQUE 1ª PARCELA CONTRATO 029/2021 VACINA COVID COVAXIN BHARAT BIONTECH

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de narço de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Prezada Emanuela Medrades,

Boa tarde!

Infelizmente, ainda existem correções a se fazer na Comercial Invoice:

- **Nome e endereço completo do Fabricante;**
- **Data de fabricação e vencimento;**
- **Número dos Lotes;**

Ficamos no aguardo para abertura da Licença de Importação.

OBS: Aproveito para lembrar que, em cumprimento ao Artigo 17 da Resolução da Diretoria Colegiada (RDC) nª 476, de março de 2021, faz-se necessário o envio dos documentos dispostos abaixo:

V - comprovação de autorização de uso emergencial por autoridade sanitária internacional nos termos do art. 15.

Ficamos no aguardo.

Assunto: Re: Pedido de Registro de LI - Covaxin

Bom dia, Monica.

Segue Invoice com os ajustes.

Incluímos a quantidade de doses por frascos, sendo 10 doses, além do peso gross e net.
Ainda não temos o CoA dos lotes que serão exportados, porém a data de fabricação é 25/05/21 com 6 meses de validade após fabricação.

Assim que a LI for registrada, o CDL poderá indicar qual lote produzido nesta data poderá ser exportado.

Atenciosamente,

Prezada Emanuela,

Boa tarde.

Seguem abaixo os apontamentos do despachante aduaneiro para correção e complementação das informações da Proforma Invoice anexa:

“Por gentileza informar:

- INCOTERM CIF é só para modal marítimo, alterar para o correto

- Informar peso liquido e bruto

- Informar Lote e validade do lote

Qual é a quantidade de frasco ? Saberia informar ?”

Ressaltamos a importância das informações da invoice estarem condizentes com as da Proforma Invoice para a agilidade do desembaraço da carga.

Atenciosamente.

Prezada Equipe WEGH,

Boa tarde!

Trata-se de Comercial Invoice referente a importação de 4.000.000 (quatro milhões) de doses.

Segue documentação para análise complementar e, estando em conformidade, gentileza providenciar a abertura de Licença de Importação (LI).

No campo informações complementares deve conter a escrita:

CONTRATO 029/2021 CELEBRADO ENTRE O MINISTÉRIO DA SAÚDE E A EMPRESA ESTRANGEIRA BHARAT BIONTECH PARA IMPORTAÇÃO DO IMUNIZANRE CONTRA A COVID-19 (COVAXIN/BBV152). IMPORTAÇÃO "AUTORIZADA CONFORME A LEI nº 14.124/2021" ou "AUTORIZADA CONFORME A LEI nº 14.125/2021";

Caso não seja possivel a abetrura da LI, gentileza fazer os apontamentos necessários.

Atenciosamente,

William Amorim Santana

Assunto: Re: Pedido de Registro de LI - Covaxin

Caro William, boa noite.

Segue Proforma Invoice para ser utilizada na abertura da LI.

Vamos precisar do registro, mesmo que em exigência, para fornecer o Packing list e demais informações dos lotes que serão destinados para o BR.

Além disso, gostaria de solicitar o auxílio quanto as tratativas junto ao INCQS, pois conforme deliberado, eles terão que realizar ensaios para liberação, e acredito que o quantitativo de amostras irã ser alterado. E informo para ciência de todos, que o período de ensaios dos testes de liberação de lote é de aproximadamente 30 dias, conforme já apresentado ao INCQS.

Atenciosamente,

Me coloco a disposição,

Ariadne, boa tarde.

Por gentileza, confirma havíamos combinado com a Daniela, estamos respondendo a Parte I dos questionamentos referentes aos estudos clínicos da Índia enviados pela GGMED.

Documentos:

1. Clinical Responses – Parte I;
2. Mock Shell Version 1.0
3. BBV152 SAP
4. Development and Licensure for Covid19 – FDA.
5. Case Report Form – CRF
6. Diário do Participante
7. ICD
8. Questionário FUP Telefone

Atenciosamente,

ANVISA
Agência Nacional de Vigilância Sanitária

VOTO Nº 163/2021/SEI/DIRE5/ANVISA

Processos nº 25351.913403/2021-02, 25351.913407/2021-82, 25351.913406/2021-38, 25351.913405/2021-93, 25351.914307/2021-73, 25351.916101/2021-88 e 25351.915151/2021-48.

Analisa pedidos do **Ministério da Saúde** e dos **Estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí** de autorização excepcional e temporária para importação e distribuição de vacinas para Covid-19 destinadas ao enfrentamento da emergência de saúde pública de importância nacional decorrente do surto do novo coronavírus (SARS-CoV-2), nos termos da Lei nº 14.124, de 10 de março de 2021.

Posição do RELATOR: ***FAVORÁVEL COM CONDICIONANTES E ASSINATURA DE TERMO DE COMPROMISSO.***

Área responsável: DIRE5

Relator: **Alex Machado Campos**

1. CONSIDERAÇÕES INICIAIS

Examinaremos, nesta sessão, os pedidos de autorização excepcional e temporária para importação, distribuição e uso de vacinas para Covid-19, da Sputnik e da Covaxin, nos termos da Lei nº 14.124, de 10 de março de 2021.

Em homenagem ao princípio da eficiência e considerando que as solicitações se apoiam em mesma dinâmica regulatória, em acordo com esta diretoria colegiada, trago a minha análise, sobre as importações das duas vacinas, de maneira unificada. As discussões e coleta de votos, contudo, serão realizadas individualmente, em benefício da melhor compreensão de cada um dos casos.

Destaco, ainda, que os pedidos de importação da vacina Sputnik estão reunidos em um só bloco, e serão analisados nesta sessão aqueles pedidos que tem processos ativos em curso na agência, em outras palavras, aqueles que pendem da análise de recurso apresentado contra a decisão originária da Anvisa, ou que ingressaram, com novos fundamentos, com outro pedido de importação. Dessa forma, analisaremos em bloco os pedidos dos estados da **Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí.**

No caso da vacina Covaxin, trata-se de novo pedido formulado pelo Ministério da Saúde, mediante a apresentação de documentos e elementos novos.

Antes de pronunciar propriamente meu voto, presidente, peço licença para tecer breves considerações.

Minhas palavras iniciais são novamente de agradecimento. Obrigado Gustavo Mendes, obrigado Ana Carolina, obrigado Suzie Marie pelas apresentações e por trazerem a síntese das manifestações as áreas técnicas da Anvisa. Em nome deles, agradeço a cada um dos servidores que participaram das discussões em torno dessas importações.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2383

Somos testemunhas: nossos servidores têm vivenciado os dias mais desafiadores das suas trajetórias profissionais. São dilemas intelectuais e científicos; discussões sobre os protocolos tradicionais; revisão de modelos regulatórios. Quebramos paradigmas nesta Agência todos os dias. Eu cumprimento com muita gratidão os técnicos da Anvisa por esse esforço sincero. Não falta coragem para debater com altivez e refletir com humildade, sem descuidar do dever de ofício: cuidar da saúde das pessoas.

Cada passo deve ser medido. O desafio permanente é estabelecer se os benefícios de uma decisão no campo da vigilância sanitária são maiores que os riscos da solução analisada. Numa pandemia em que milhares de pessoas morrem diariamente, essa decisão, de avaliar plataforma vacinais, é sempre muito complexa. De um lado a necessidade de mais vacinas; do outro, o compromisso de levar vacinar seguras, eficazes e de qualidade para a população. Essa é a permanente tensão que nos mobiliza.

É sempre uma decisão multisaberes, que deve se escorar na ciência e nos mecanismos que ela mesmo nos oferece para mitigar riscos que eventualmente precisemos admitir. O benefício deve sempre superar o risco. E os riscos, por sua vez, devem ser enfrentados com transparência e com medidas de controle.

A decisão de hoje é mais uma dessas decisões dificílimas a que estamos submetidos desde o início da pandemia. Os nossos dilemas e as nossas convicções, mesmo que não coincidentes, trilham o caminho da absolta transparência.

Buscamos, a todo instante, as decisões menos imperfeitas; e qualquer delas devem ser submetidas ao escrutínio público permanente. O formato dessa reunião explica esse compromisso, que é uma necessidade incontornável da nossa realidade. O cidadão deve ter direito a saber tudo. De tudo mesmo. A imprensa, a academia, os especialistas, por sua vez, tratam de exercer crítica qualificada em benefício desse mesmo cidadão que nos empenhamos em proteger.

Aqui, novamente, como lá trás, em janeiro, quando aprovamos as primeiras vacinas, na condição de uso emergencial, remanescem os dramas pessoais nessa disputa com vírus; o sofrimento do próximo; testemunhos; cenas que chocam, sensibilizam e amedrontam. Amigos e familiares adoecidos ou que se foram. A situação hoje é ainda pior, essa é a verdade. Os números mostram.

De novo somos tomados pelas reflexões solitárias, pelos dilemas, dúvidas, incertezas, só resolvidas diante do esforço coletivo e compartilhado do trabalho. Assim chegamos até aqui, mesmo diferentes, e no respeito à divergência.

***

Feitas essas observações, passo a proferir o meu voto, que se baliza nos pareceres das áreas técnicas envolvidas nesta análise, as quais respondem, respectivamente, pelas ações de registro, fiscalização, monitoramento e farmacovigilância.

Antes de seguir com as análises individualizadas dos pedidos, cumpre promover esclarecimento inicial quanto ao eixo regulatório que guiará, na sequência, a análise e, ao final, espelhará o meu voto.

Os pedidos de importação protocolados pelos entes subnacionais e pelo ministério da saúde foram ancorados em legislação recente, a Lei nº 14.124/21, que veio a disciplinar modalidade regulatória nova, denominada: Autorização Excepcional e Temporária para a Importação.

Essa modalidade instituída pela lei em nada se confunde com os processos que resultam em concessão de registro da vacina ou que permitem o seu uso emergencial. Nas modalidades regulatórias de registro de uma vacina ou de autorização do uso emergencial, o tipo de trabalho exercido pela Anvisa é do público conhecido, assim como do meio acadêmico e científico. Trata-se de exame robusto, detalhado, de reconhecido rigor analítico, ensejando, ou não, o aval e o selo da Anvisa em função dos aspectos de segurança, qualidade e eficácia.

Na importação excepcional, objeto da presente deliberação, estamos diante de modalidade regulatória com rito, em princípio, mais abreviado e acelerado, na medida em que a Anvisa se limitaria a inferir, a partir de um relatório técnico emitido por outra autoridade sanitária, se aspectos de segurança, qualidade e eficácia foram observados por tal autoridade.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2384

De acordo com o art. 16, da Lei 14.124/21, a União, os Estados, os Municípios e o Distrito Federal podem promover a importação excepcional de vacinas para combater a Covid-19, que não possuam o registro sanitário definitivo na Anvisa, desde que registradas ou autorizadas para uso emergencial pelas autoridades sanitárias estrangeiras que define, entre as quais, a autoridade da Rússia e autoridade Indiana.

Estabeleceu a lei, também, que a Anvisa, conforme estabelecido em ato regulamentar próprio - RDC nº 476/21 -, deve oferecer parecer e decidir em sete dias úteis sobre o pedido de importação. Contudo, prevê a norma que, na ausência do relatório técnico de avaliação da autoridade sanitária internacional, o prazo dessa decisão será de até 30 (trinta) dias.

Tal procedimento se assemelha ao já estabelecido pela RDC nº 203/2017, que dispõe sobre os critérios e procedimentos para importação, em caráter de excepcionalidade, de produtos sujeitos à vigilância sanitária sem registro na Anvisa. De acordo com esta Resolução, podem ser autorizados para importação, em caráter de excepcionalidade, os imunobiológicos integrantes do Programa Nacional de Imunização, adquiridos por meio do Fundo Rotatório para Aquisições de Imunobiológicos da Organização Pan-americana da Saúde (Opas)/Organização Mundial de Saúde (OMS). Esses produtos devem ser pré-qualificados pela OMS, mas também não passam por uma análise de qualidade, segurança e eficácia pela Anvisa. Esse instrumento regulatório é essencial para manutenção do abastecimento do Programa Nacional de Imunização (PNI) e para o fornecimento de vacinas à nossa população.

Apesar das partes comuns que ensejam a análise conjunta dos pedidos, meu voto comporta capítulos específicos sobre a Sputnik e a Covaxin.

Para melhor compreensão pública da metodologia de análise adotada, optei pelo seguinte roteiro.

As duas vacinas foram objeto de pedidos de importação já analisados e não autorizados pela Anvisa, por motivos e razões já amplamente divulgados.

Nesse sentido, trilharei a análise dos novos pedidos de importação da seguinte forma: na primeira parte do exame individualizado de cada uma das vacinas, observarei se as razões que levaram ao indeferimento das importações foram superadas ou de algum modo mitigadas pelo desenvolvedor neste novo pedido; na segunda parte, destacarei, quando houver, as incertezas ou inconsistências remanescentes, apontando ao final se elas implicam o indeferimento ou não do pedido.

2. DA IMPORTAÇÃO DA VACINA SPUTNIK V

2.1 Relatório

Analisa-se os pedidos de autorização para importação excepcional da vacina Sputnik V, nos termos da Lei nº 14.124, de 10 de março de 2021, dos Estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí.

Os processos foram autuados sob as numerações abaixo descritas, com os respectivos quantitativos e cronogramas.

Estado / Município	Processo SEI	Ofício	Data de recebimento	Cronograma para 2021 (doses)
Bahia	25351.913403/2021-02	Ofício nº PGE/PA n.160/2021	29/04/2021	Abril: 520.620; Maio: 1.301.540; Junho: 2.603.090; Julho: 5.345.030 Total: 9.770.280
Maranhão	25351.913407/2021-82	Ofício nº 121/2021-GAB/PGE	29/04/2021	Abril: 244.210; Maio: 610.500; Junho: 1.221.000; Julho: 2.507.150 Total: 4.582.860
Sergipe	25351.913406/2021-38	Ofício nº 002/2021/NATS/PGE/SE	29/04/2021	Abril: 21.310; Maio: 53.290; Junho: 106.570; Julho: 218.830 Total: 400.000
Ceará	25351.913405/2021-93	Of. 1.712/ 2021 – GABSEC/SESA	07/05/2021	Abril: 385.158; Maio: 962.896; Junho: 1.925.792; Julho: 2.307.764 Total:

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2385

				5.581.610
Pernambuco	25351.914307/2021-73	Ofício nº 41/2021 - GAB/SES	14/05/2021	Abril: 213.150; Maio: 532.850; Junho: 1.065.710; Julho: 2.188.290 Total: 4.000.000
Piauí	25351.916101/2021-88	Ofício Nº: 337/2021/PGE-PI/GAB/AP1	01/06/2021	Abril: 115.820; Maio: 289.560; Junho: 579.110; Julho: 1.189.120 Total: 2.173.610

Importa esclarecer que a Anvisa já deliberou sobre pedidos anteriores de importação excepcional da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública de 26 de abril de 2021. Naquela oportunidade, o relatório técnico de avaliação da autoridade sanitária internacional requerido pela Lei nº 14.124/21 não foi apresentado e os aspectos técnicos lacunosos não foram supridos, conforme extensamente demonstrado naquela oportunidade. Diante disso, a Diretoria Colegiada decidiu, por unanimidade, não autorizar os pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V.

Após a deliberação ocorrida em 26/04, os estados da Bahia, Maranhão, Sergipe, Ceará, Pernambuco e Piauí apresentaram os Ofícios nº PGE/PA nº 160/2021, nº 121/2021-GAB/PGE, nº 002/2021/NATS/PGE/SE, Of. 1.712/ 2021 – GABSEC/SESA, Ofício nº 41/2021 - GAB/SES e Ofício Nº 337/2021/PGE-PI/GAB/AP1, respectivamente, enviados com o objetivo de oferecer esclarecimentos técnicos e documentação comprobatória da eficácia, qualidade e segurança da vacina Sputnik V, além de requerer novo pronunciamento sobre o assunto.

Ato contínuo, o estado da Bahia enviou o Ofício nº PGE/PA n. 168/2021 e o estado do Maranhão enviou o Ofício n.º 001/2021-ASS-ESPECIAL/PGE, com requerimento de juntada de dois novos documentos, visando subsidiar a reapreciação do pleito de autorização de importação excepcional da vacina Sputnik V.

Dessa forma, em atenção ao princípio da eficiência administrativa, os pedidos de reapreciação dos pleitos de autorização de importação excepcional da vacina Sputnik V foram recepcionados pela Anvisa como novos pedidos de importação, o que ensejou a abertura dos processos administrativos ora em deliberação. Tais processos tiveram como marco inicial para atendimento aos prazos da Lei nº 14.124/2021 o dia do protocolo, conforme tabela acima.

No dia 07/05, foi enviado o Ofício nº 1084/2021/SEI/GADIP-CG/ANVISA ao estado da Bahia, o Ofício nº 1083/2021/SEI/GADIP-CG/ANVISA ao estado do Maranhão, o Ofício nº 1085/2021/SEI/GADIP-CG/ANVISA ao estado de Sergipe; no dia 11/05, o Ofício nº 1111/2021/SEI/GADIP-CG/ANVISA ao estado do Ceará; e, no dia 18/05, o Ofício nº 1180/2021/SEI/GADIP-CG/ANVISA ao estado de Pernambuco. Nos referidos Ofícios, a Agência informou que os documentos encaminhados no dia 29/04 não cumpriam o requisito referente à apresentação do relatório técnico de análise da autoridade sanitária estrangeira, disposto pelo § 3º do art. 16 da Lei nº 14.124/2021, nem traziam novos elementos que refutassem as razões que motivaram a não autorização dos pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública da Diretoria Colegiada da Anvisa. Ademais, as manifestações das áreas técnicas da Anvisa referentes aos documentos encaminhados foram enviadas aos estados (Nota Técnica nº 63/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA; Nota Técnica nº 48/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA; e Relatório de avaliação da resposta encaminhada pelo Instituto Gamaleya sobre os motivos que levaram à negativa de importação da vacina Sputnik V). Por fim, os Ofícios informaram que os processos se encontravam em diligência e que a deliberação da Anvisa ocorreria de acordo com o prazo estabelecido pela Lei nº 14.124/2021.

No dia 13/05, foi enviado o Ofício nº 1145/2021/SEI/GADIP-CG/ANVISA ao estado da Bahia e o Ofício nº 1139/2021/SEI/GADIP-CG/ANVISA ao estado do Maranhão. Tais documentos informaram aos estados que os novos documentos encaminhados por meio do Ofício nº PGE/PA n. 168/2021 e Ofício nº 001/2021-ASS-ESPECIAL/PGE, apresentados no dia 04/05, não cumpriam o requisito referente à apresentação do relatório técnico de análise da autoridade sanitária estrangeira, disposto pelo § 3º do

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2386

art. 16 da Lei nº 14.124/2021, nem traziam novos elementos que refutassem as razões que motivaram a não autorização dos pedidos de autorização excepcional e temporária para importação e distribuição da vacina Sputnik V por ocasião da 7ª Reunião Extraordinária Pública da Diretoria Colegiada da Anvisa. Novamente, as manifestações das áreas técnicas foram enviadas aos estados (Nota Técnica nº 54/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA e Despacho nº 77/2021/SEI/GFARM/GGMON/DIRE5/ANVISA). Por fim, os Ofícios da Anvisa ressaltaram, novamente, que os processos se encontravam em diligência e que a deliberação da Anvisa ocorreria de acordo com o prazo estabelecido pela Lei nº 14.124/2021.

No dia 21/05, a Anvisa recebeu o Ofício nº PGE/PA n. 201/2021 do estado da Bahia e o Ofício nº 146/2021-GAB/PGE do estado do Maranhão; no dia 24/05, o Ofício nº 003/2021/NATS/PGE/SE do estado de Sergipe; e no dia 25/05, o Ofício GABSEC/SESA nº 2009/2021 do estado do Ceará. Todos encaminharam o relatório técnico emitido pelo Ministério da Saúde da Rússia e exigido com base no §3º do art. 16 da Lei nº 14.124/2021, com vistas à comprovação do atendimento dos requisitos técnicos de eficácia, qualidade e segurança da vacina em análise.

No dia 25/05, o Consórcio Nordeste enviou o Ofício CIDSNE/PRESID nº 025/2021, o qual apresentava ponderações e proposições para contribuir com a tomada de decisão acerca do pedido de autorização excepcional da vacina Sputnik V protocolado pelos estados do Nordeste. Dessa forma, compreendendo que cabe às autoridades públicas compartilhar as responsabilidades, o Consórcio Nordeste reiterou o pedido de aprovação em caráter excepcional da vacina Sputnik V e propôs a adoção, em caráter de excepcionalidade, das seguintes medidas de contingência que estariam sob a responsabilidade dos estados envolvidos:

1. Assinatura de um Termo de Compromisso onde estejam definidas tais responsabilidades;
2. Realização de um estudo de efetividade, a partir da importação e aplicação dos primeiros lotes da vacina, utilizando-se de um protocolo a ser desenhado de forma acordada com a Anvisa e executado segundo as normas de Boas Práticas Clínicas, por centros de pesquisa habilitados, incluindo aqueles ligados às Universidades presentes nos estados importadores;
3. Implementação de um Programa de Monitoramento de Eventos Adversos (Farmacovigilância) sob a responsabilidade conjunta das autoridades estaduais de vigilância, voltado ao permanente registro e investigação de eventos adversos relacionados com a utilização da vacina e a devida comunicação à Anvisa;
4. Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o INCQS/Fiocruz.

No dia 31/05, a Anvisa enviou os Ofícios nºs: 1294/2021/SEI/GADIP-CG/ANVISA à Bahia; 1293/2021/SEI/GADIP-CG/ANVISA ao Maranhão; 1292/2021/SEI/GADIP-CG/ANVISA à Sergipe; 1291/2021/SEI/GADIP-CG/ANVISA ao Ceará. Os referidos Ofícios contextualizaram o histórico dos processos administrativos na Agência e informaram que, considerando-se a quantidade de novos documentos e informações juntados aos autos pelos estados, incluindo-se a apresentação do relatório técnico de avaliação emitido pelo Ministério da Saúde da Federação da Rússia, além da formalização pelo Consórcio Nordeste do seu compromisso de executar medidas de contingência para resguardar a segurança, qualidade e eficácia da vacina Sputnik V, a Anvisa entende indispensável que seja efetuada análise técnica complementar a fim de decidir de forma exauriente sobre os pedidos dos Estados. Dessa forma, resguarda-se que não ocorram prejuízos nem aos requerentes e nem à população brasileira com uma decisão que não seja conclusiva ou que não tenha considerado todos os elementos técnicos juntados ao processo sobre a importação e a distribuição da vacina Sputnik V em nosso país, matéria de grande relevância nacional, motivo pelo qual, nos termos do art. 45 da Lei nº 9.784/99, com base no poder geral de cautela na seara administrativa, a deliberação final da Anvisa sobre os requerimentos administrativos ocorreria até o dia 08/06/21 (terça-feira).

Portanto, restando demonstrado o histórico dos processos administrativos no âmbito da Anvisa e os novos elementos acostados aos autos, esclareço que os pleitos ora em deliberação foram

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2387

instruídos com os documentos apresentados nos novos pedidos e com toda a documentação que instruiu os processos iniciais. Dessa forma, foram apresentados pelos solicitantes os seguintes documentos que compõem os processos:

- Ofícios contendo o cronograma de importação;

- Declaração atestando o descumprimento do Plano Nacional de Operacionalização da Vacinação contra a Covid-19;

- Declaração atestando a adoção das estratégias de monitoramento e cumprimento das diretrizes de farmacovigilância;

- Certificado do registro do produto na Rússia, país onde o produto é fabricado;

- Relatório técnico de avaliação da vacina emitido pelo Ministério da Saúde da Rússia.

Assim, toda a documentação requerida pela Lei nº 14.124/21 e pela RDC nº 476/21 foi apresentada pelos requerentes nos processos ora em deliberação. Além de ter sido apresentado o relatório de avaliação emitido pela autoridade sanitária responsável pela aprovação do registro da vacina, conforme requerido pela citada Lei e cuja ausência também motivou a negativa do pedido anterior de importação, o Consórcio Nordeste enviou Ofício que traz medidas de contingência importantes para o caso de aprovação dos pleitos de importação, sinalizando a preocupação dos gestores dos estados no monitoramento do uso da vacina no Brasil e nas medidas de proteção à saúde da população.

***

Conforme ressaltei no início do meu voto, o olhar capital da minha análise se deterá em observar em que medida as lacunas de informação relatadas por mim, no dia 26/04, e que ensejaram o indeferimento, unânime, da autorização de importação, foram superadas a partir dos documentos apresentados nesse novo pedido.

Nesse sentido, cumpre destacar que consta desses novos pedidos de importação um documento de enorme relevância para o processo de deliberação, inexistente na avaliação anterior, e que funciona como requisito legal e balizador de referência para as avaliações técnicas da agência.

Faço menção a apresentação, nessa nova análise, do **relatório técnico de avaliação da vacina emitido pela autoridade sanitária estrangeira**, no caso, da Rússia, em atendimento ao § 3º, do art. 16, da Lei nº 14.124.

Além do referido relatório, merece realce o envio de um ofício, subscrito pelo Consórcio Nordeste, contendo ponderações e proposições para contribuir com a tomada de decisão acerca dos pedidos de autorização excepcional da vacina Sputnik V protocolados pelos estados do Nordeste, dentre as quais a adoção, como já mencionei, em caráter de excepcionalidade, de medidas de contingência que estariam sob sua responsabilidade especialmente a assinatura de Termo de Compromisso perante esta Agência, realização de estudos de efetividade, a partir da importação e aplicação dos primeiros lotes da vacina, implementação de programa de monitoramento de eventos adversos (farmacovigilância) e submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios públicos.

No julgamento anterior, diante da ausência do relatório técnico da vacina, a Anvisa buscou todos os elementos de avalição disponíveis para tentar identificar, por meio desses elementos, se seria possível aferir os aspectos de segurança, qualidade e eficácia mínimos e necessários à autorização da importação excepcional.

Nesse sentido, avaliamos, por exemplo, documentos de posse da agência por força da análise em curso em outro processo dentro da agência, o de uso emergencial. No mesmo propósito, promovemos inspeções em plantas fabris da Sputnik na Rússia e tentamos obter informações a respeito da vacina junto a dezenas de países e também por intermédio de outras instituições de regulação com as quais a Anvisa estabelece parceria institucional.

Naquela ocasião, por força da ausência do relatório técnico e diante das informações colhidas a partir desse conjunto de iniciativas, um número significativo de aspectos foram apontados pela Anvisa, os quais refletiam uma fotografia das condições da plataforma vacinal naquele instante; alguns

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2388

desses aspectos, conforme pareceres das áreas técnicas, foram superados a partir de informação contida no relatório técnico apresentado, mas outros aspectos permanecem em debate, e devem ser sopesados, na minha opinião, à luz do atual cenário sanitário e epidemiológico de nosso país.

2.2 Da vacina Sputnik V

A Vacina Sputnik V (Gam-COVID-Vac) é fabricada na Rússia e está registrada perante o Ministério da Saúde da Rússia, Órgão Sanitário do mesmo país.

A vacina consiste em dois componentes:

• o componente 1 vem na forma de partículas virais recombinantes baseadas no adenovírus humano sorotipo 26 que carrega o gene da proteína do vírus SARS-CoV-2;

• o componente 2 vem na forma de partículas virais recombinantes baseadas no adenovírus humano do sorotipo 5 que carrega o gene da proteína S do vírus SARS-CoV-2.

A vacinação é administrada em duas etapas: primeiro 0,5 mL do Componente I e, em seguida, três semanas depois, 0,5 mL do componente II. Após a administração da vacina, a equipe médica deve acompanhar o estado de saúde do paciente durante um período de 30 minutos.

Existem dois regimes aprovados para o armazenamento e transporte da vacina: i) a vacina congelada deve ser transportada e armazenada em local escuro a uma temperatura de -18°C ou menos. O prazo de validade dessa vacina é de 6 meses a partir da data de produção. O descongelamento leva de 3 a 5 minutos. Uma vez descongelada, essa vacina deve ser administrada dentro de 120 minutos; ii) a vacina na forma líquida (fabricada no site da Generium) deve ser transportada e armazenada em local escuro a uma temperatura de +2 a + 8°C. O prazo de validade dessa vacina é de 2 meses a partir da data de produção. Uma vez retirada da geladeira, tal vacina deve ser administrada dentro de 120 minutos.

A vacina Gam-COVID-Vac ou Sputnik é indicada para a imunização ativa de indivíduos ≥ 18 anos de idade para a prevenção da Covid-19.

2.3 Do relatório de avaliação emitido pela autoridade estrangeira

No caso da importação da vacina Sputnik, a apresentação do relatório técnico da vacina emitido pela autoridade de regulação estrangeira **é fato processual de relevo**; traduz-se em substancial mudança do quadro probatório, uma vez que a deliberação anterior, como já mencionado, seguiu e evoluiu sem se pautar pelas balizas de tal relatório técnico previsto em lei. Em síntese, esse documento inexistia, e ele agora foi apresentado à agência.

Merece registro que o legislador, por meio da Lei nº 14.124/21, estabeleceu a possibilidade de importação excepcional de vacina, sem registro na Anvisa, quando o pedido é lastreado em registro ou em uso emergencial de vacina ou medicamento obtido ou aprovado em autoridade regulatória estrangeira definida pela lei.

Para tanto, a norma dispõe que o pedido deve ser guarnecido com o próprio documento de registro ou com o certificado de uso emergencial alcançado na autoridade estrangeira, e ainda com o relatório técnico da avaliação da vacina, emitido ou publicado por aquela autoridade sanitária internacional, tendo que ser capaz de comprovar que a vacina atende aos padrões de qualidade, de eficácia e de segurança estabelecidos pela OMS ou pelo ICH e pelo PIC/S.

Assim, diante da apresentação do relatório técnico da vacina previsto na lei, cabe à Anvisa avaliar e decidir – já que lhe compete, nos termos da mesma lei, oferecer parecer sobre a importação – se o relatório apresentado atende aos requisitos de qualidade, de eficácia e de segurança estabelecidos na norma.

Pois bem. No dia 21/05, os requerentes encaminharam à Anvisa o relatório técnico de avaliação emitido pelo Ministério da Saúde da Federação Russa, em atendimento ao requerimento constante no § 3º do art. 16 da Lei nº 14.124/21.

A Assessoria de Assuntos Internacionais (AINTE), por meio do Despacho nº 97/2021/SEI/AINTE/GADIP/ANVISA, informou ter confirmado a autenticidade do documento Technical

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2389

report final RUS Final, o qual foi igualmente transmitido à AINTE após reiteração ao Ministério da Saúde da Federação Russa.

O referido Relatório Técnico descreve a análise realizada pelo Ministério da Saúde da Federação Russa para o registro da vacina Gam-COVID-Vac (marca registrada - Sputnik V), desenvolvido por N.F. Gamaleya National Research Center of Epidemiology and Microbiology.

Descrevo, a seguir, os principais aspectos do Relatório, especialmente no que se refere aos aspectos apontados pela Anvisa em deliberação anterior sobre os pedidos de importação da vacina Sputnik V.

O documento informa que o registro da vacina Gam-COVID-Vac foi realizado de acordo com os requisitos regulatórios adotados na Federação Russa, bem como de acordo com práticas internacionais. A prática regulatória da Federação Russa para o registro de vacinas cumpre integralmente os requisitos recomendados pela OMS e ICH, em particular as “Diretrizes sobre avaliação clínica de vacinas: expectativas regulatórias”.

Na Federação Russa, o Ministério da Indústria e Comércio é responsável pela emissão dos certificados de Boas Práticas de Fabricação (BPF). A inspeção da planta Generium pela comissão do Ministério da Indústria e Comércio foi realizada em 14 de agosto de 2020 e 9 de fevereiro de 2021. A inspeção do site Pharmstandart-UfaVita foi realizada em 26 de março de 2021 e a inspeção da unidade de produção de Medgamal foi realizada em 25 de maio de 2018 e 15 de março de 2021. Todas as inspeções foram concluídas sem comentários e confirmaram a possibilidade de liberação da vacina em cada um dos locais de produção designados.

A produção da vacina em um volume de biorreator de 5L e escalonamento adicional de produção usando biorreatores maiores, de até 1000L, foram acompanhados pelo controle de qualidade do produto acabado e de produtos intermediários, bem como um relatório de comparabilidade para a escala de 5L a 100L e um relatório separado para a escala de 100L a 1000L, de acordo com as regras do Ministério da Saúde da Federação Russa. O controle de produtos intermediários foi realizado de acordo com os pontos de controle da produção, o que foi confirmado pelo documento “Descrição de controle de etapas críticas da produção e de produtos intermediários", que está incluído no dossiê de registro. Todas as séries liberadas passaram no controle de qualidade no laboratório do Instituto Gamaleya e no laboratório estadual de Roszdravnadzor, Serviço Federal de Vigilância em Saúde, e mostraram conformidade com os parâmetros de qualidade especificados em todas as etapas de escalonamento do processo de produção para cada um dos sites produtivos.

Sobre as impurezas, o documento relata que o produto fabricado não contém impurezas comuns para vacinas vivas ou inativadas. As principais impurezas a serem controladas no medicamento incluem DNA residual e proteínas de células hospedeiras. Essas impurezas são controladas de acordo com as especificações de qualidade na etapa de controle em processo ou na etapa de produto acabado.

Quanto ao controle de qualidade, o Instituto Gamaleya apresentou especificações, controle de qualidade de intermediários na etapa de controle em processo e para liberação de controle de qualidade do produto acabado. As especificações e métodos de controle de qualidade foram baseados na Farmacopeia da Federação Russa ou em métodos de análise internos.

O duplo controle de qualidade realizado pelo Instituto Gamaleya e pelo Laboratório Roszdravnadzor não detectou qualquer RCA na vacina Sputnik V. O controle para RCA é realizado não apenas para o produto acabado, mas também em diferentes estágios de produção, incluindo a semente viral e concentrado da vacina. A ausência de RCA é confirmada por protocolos de controle de qualidade emitidos pelo Gamaleya e pelo Laboratório Roszdravnadzor.

Ainda de acordo com o relatório, as normas existentes para determinar as quantidades de RCA na vacina Sputnik V estão de acordo com as recomendações do FDA. Conforme os regulamentos da FDA existentes, de 33 RCA (com base em uma dose intratumoral de 1012 partículas) a 1000 RCA (com base em uma dose intravenosa máxima de 3x1013 partículas) podem entrar no corpo humano.

Sobre os estudos pré-clínicos, o documento informa que o perfil de segurança de várias vacinas baseadas em adenovírus recombinantes, desenvolvidas pelo Instituto Gamaleya, é comparável e

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2390

não difere significativamente entre as vacinas desenvolvidas e em relação a medicamentos semelhantes (de acordo com dados da literatura).

O programa de estudo incluiu estudos de atividade imunológica e segurança (toxicidade), incluindo avaliação de toxicidade para administração única e repetida, e para administração consecutiva do Componente I e do Componente II da vacina, avaliação da toxicidade reprodutiva e de desenvolvimento, imunogenicidade e alergenicidade.

Os estudos de toxicidade reprodutiva ainda estão em andamento. Os efeitos farmacocinéticos (biodistribuição) e farmacodinâmicos foram estudados.

Os resultados demonstraram, segundo o relatório, a não toxicidade da vacina em diferentes animais de laboratório em uma ampla gama de doses. O nível de segurança demonstrado por estudos pré-clínicos permitiu estudos clínicos em voluntários saudáveis.

A segurança, imunogenicidade e eficácia da vacina Gam-COVID-Vac foram avaliadas durante os estudos clínicos.

Os dados dos estudos de fases I e II confirmaram que a administração da vacina desenvolvida induz a formação de forte resposta imune ao vírus SARS-CoV-2 e envolve imunidade humoral e celular.

Para os estudos de fase I, tem-se as seguintes conclusões:

- Tanto uma imunização de dose única com o componente I ou II da vacina, quanto uma imunização de dose dupla, pode levar à formação de anticorpos IgG específicos em 100% dos voluntários no dia 21 após a imunização. No caso da dose dupla, os títulos máximos de anticorpos foram atingidos no dia 42 após o início da imunização;

- A imunização de dose dupla resultou em valores estatisticamente mais altos para os títulos de anticorpos IgG específicos em comparação com a imunização de dose única com o componente I ou II, que demonstra as vantagens da imunização de reforço e fornece a justificativa para recomendá-la para prática clínica futura;

- Quando os títulos de anticorpos IgG específicos foram comparados entre os voluntários vacinados no dia 28 após o início da vacinação com os títulos de anticorpos IgG em convalescentes após Covid-19, foi demonstrado que, no caso de uma administração de dose única, os títulos são comparáveis e, no caso de vacinação primária-reforço, os títulos dos voluntários vacinados excedem os títulos dos convalescentes;

- No soro sanguíneo de voluntários vacinados com ambos os componentes da vacina, no dia 28 após o início da vacinação, a taxa de soroconversão foi de 95%. No dia 42 após o início da vacinação, a taxa de soroconversão foi de 100%;

- Tanto a imunização de dose única com o componente I ou II quanto a imunização de dose dupla pode resultar no desenvolvimento de resposta mediada por células específica ao antígeno, o que foi confirmado pelo alto grau de confiabilidade estatística para os parâmetros medidos antes e após a imunização;

- Tanto a imunização de dose única quanto a imunização de dose dupla foram capazes de induzir linfócitos T CD4 + e CD8 +;

- Os resultados do estudo mostraram que a pré-imunidade aos componentes dos vetores da vacina não afeta a eficácia da vacinação;

- A análise de segurança sobre os resultados do estudo (até o dia 180 do período de observação) mostrou que a maioria dos eventos adversos (AEs) detectada foi leve e resultou em recuperação. Não foram registrados AEs graves.

Outros dois estudos de fases II e III da vacina Gam-COVID-Vac estão sendo realizados: “Um estudo clínico randomizado, duplo-cego, controlado por placebo, multicêntrico sobre a eficácia, imunogenicidade e segurança da vacina de vetor combinado Gam-COVID-Vac para ajudar a prevenir a infecção por coronavírus induzida pelo vírus SARS-CoV-2, de acordo com o protocolo nº 04-GamCOVID-

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2391

Vac-2020 em 40.000 voluntários acima de 18 anos" e "Um estudo aberto sobre a segurança, tolerabilidade e imunogenicidade do medicamento 'GamCOVID-Vac ', uma solução para injeção intramuscular, em voluntários saudáveis com mais de 60 anos de acordo com o protocolo nº 05-Gam-COVID-Vac-2020 em 110 voluntários".

As seguintes conclusões foram obtidas para o estudo 04-Gam-COVID-Vac-2020:

- A vacina em estudo tem um bom perfil de segurança, em particular, nenhuma reação alérgica grave induzida pela vacina foi registrada;

- O grupo de pacientes com mais de 60 anos não diferiu da população geral em termos do perfil de segurança;

- Não houve eventos adversos sérios inesperados relatados durante o estudo;

- 100% dos voluntários do grupo de vacinação com Sputnik V apresentaram resposta imune estável;

- A vacinação de reforço levou a uma morbidade estatisticamente menor no grupo de tratamento do que no grupo placebo;

- A eficácia observada para a vacina em estudo foi de 91,6%;

- A vacinação primária-reforço levou à uma severidade reduzida nos casos de doenças, com 100% de proteção contra casos graves de Covid-19;

- Idade, sexo e comorbidades não tiveram uma correlação estatisticamente significativa com o risco de infecção;

- Uma imunização de dose única com o Componente I mostrou uma diferença estatisticamente significativa em eficácia observada no período de 14 a 21 dias. De acordo com os dados obtidos, foi observada uma eficácia > 70% na redução do risco da doença do dia 14 ao dia 20 após o Componente I ter sido administrado. Consequentemente, uma imunização de componente único é capaz de reduzir significativamente o risco de doença, mesmo em um estágio inicial após a vacinação;

- Os dados obtidos parecem confirmar a hipótese do estudo de que a administração da vacina desenvolvida é segura e induz a formação de uma resposta imune protetora ao vírus SARS-CoV-2.

- A utilização de dois vetores diferentes com base nos sorotipos Ad26 e Ad5 de adenovírus humano em duas injeções separadas permite que a vacina forneça proteção mais eficaz contra o coronavírus, em comparação com as vacinas que usam o mesmo vetor para ambas as injeções, porque o sistema imunológico inicia mecanismos de proteção contra o produto após a segunda injeção. Usando dois vetores diferentes, a vacina Gam-COVID-Vac permite evitar possível efeito neutralizante e faz com que a resposta imune seja estável e durável;

- Até o momento da divulgação do relatório, 33.760 voluntários estavam randomizados para o estudo. Destes, 25.320 voluntários receberam a vacina e 8.440 voluntários receberam o placebo;

- Em comparação com outros protocolos, o estudo 04-Gam-COVID-Vac-2020 alcançou o seu objetivo em confirmar os resultados de eficácia e segurança da Sputnik V.

Para o estudo 05-Gam-COVID-Vac-2020, obtiveram-se as seguintes conclusões:

- Uma única imunização com o Componente I da vacina pode levar à formação de anticorpos IgG específicos em 53,2% dos voluntários com mais de 60 anos no 21º dia após a imunização;

- A imunização de voluntários com mais de 60 anos pode levar à formação de anticorpos IgG específicos em 98,1% dos voluntários no 28º dia após a imunização;

- Ao imunizar voluntários com mais de 60 anos de idade, os títulos de anticorpos continuaram a aumentar até 42 dias após a imunização (o que foi demonstrado para uma subpopulação de voluntários);

- A imunização dupla dos voluntários resultou na formação de linfócitos T CD4+ e CD8 + específicos no 28º dia após administração do Componente I da vacina. Os resultados indicaram a indução de imunidade celular como parte da imunidade nos voluntários após a imunização;

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2392

- A vacinação dupla pode levar ao desenvolvimento de imunidade mediada por células em voluntários com mais de 60 anos (com base nos dados de resposta linfoproliferativa e secreção de interferon gama), que foi confirmada por um alto grau de significância estatística dos parâmetros medidos antes e depois da imunização;

- A vacinação dupla pode causar a formação de linfócitos T CD4 + e T CD8 + específicos;

- A análise de segurança dos resultados do estudo mostrou que algum tipo de AE foi registrado em 17 voluntários (15,60%). Um SAE registrado (fibrilação atrial que exigiu hospitalização) foi considerado não relacionado à vacina em estudo;

- Nenhum EA grave foi registrado. A maioria dos AEs resultou em recuperação. Os EAs detectados durante o estudo são característicos da maioria das vacinas.

No que se refere ao uso pediátrico, estudos sobre a avaliação da segurança do uso da vacina em crianças não foram realizados. Nas instruções de uso para a vacina, a categoria de menores de 18 anos está incluída na seção "Contraindicações" (devido à falta de dados sobre a sua eficácia e segurança).

Sobre a imunização de mulheres grávidas, na data do relatório, a gravidez e a amamentação foram incluídas na lista de contraindicações para uso da vacina.

Sobre o uso em idosos, no momento, um estudo clínico está em andamento em 110 voluntários, “Um estudo aberto sobre a segurança, tolerabilidade e imunogenicidade do medicamento Gam-COVID-Vac, uma solução para uso por injeção intramuscular, em voluntários saudáveis com mais de 60 anos”. Foram realizadas alterações nas informações do paciente do texto de bula a fim de permitir o uso da vacina em pacientes idosos.

As seguintes condições foram definidas pelo Ministério da Saúde para autorização da vacina, de acordo com o regulamento do Governo da Rússia para situações de emergência:

a) imposição de restrições para seu uso seguro: a vacina pode ser usada apenas em organizações de saúde autorizadas a vacinar a população de acordo com o procedimento previsto na lei;

b) relatar cada fato do uso da vacina ao Serviço Federal de Vigilância em Saúde;

c) necessidade de realização de estudos clínicos pós-comercialização, cujos resultados servirão de base para avaliar a relação benefício / risco esperada da vacina ao confirmar seu registro;

d) a necessidade de testes de amostras de lote de qualidade da vacina de acordo com a legislação da Federação Russa.

O registro foi concedido de acordo com os requisitos regulamentares gerais adotados na Federação Russa, bem como de acordo com as práticas internacionalmente aceitas. A prática regulatória da Federação Russa para o registro de vacinas está em total conformidade com os requisitos recomendados pela OMS e ICH.

A Indicação Terapêutica Aprovada é: a vacina Gam-COVID-Vac é indicada para a imunização ativa de indivíduos ≥ 18 anos de idade para a prevenção de COVID-19.

A posologia aprovada é: o esquema de vacinação com a vacina Gam-COVID-Vac consiste em um esquema de duas doses de 0,5 mL cada. A segunda dose deve ser administrada 21 dias após a primeira dose.

O Ministério da Saúde da Federação Russa concedeu o registro, em uma base condicional, para a vacina Gam-COVID-Vac desenvolvida pelo Instituto Gamaleya.

Além dos aspectos técnicos constantes no relatório emitido pela autoridade Russa, foi possível verificar correspondência entre o conteúdo do referido documento com o constante em relatórios emitidos por outras autoridades sanitárias de referência, como os da OMS, FDA, Canadá e da própria Anvisa. Não apenas há um grau de concordância entre os itens constantes nos documentos, como em relação à profundidade da discussão sobre os documentos avaliados e que levaram à decisão pela Autoridade.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2393

Ao avaliar o relatório, a Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS), por meio da Nota Técnica nº 80/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, informou que, no documento de aprovação do FDA de vacinas para Covid-19, também não há maiores detalhes sobre os resultados das inspeções, tais como compromissos, achados e medidas de mitigação adotadas, porém estas ficam descritas nos relatórios de inspeção. No caso do EMA, o documento de aprovação não indica os detalhes dos eventuais achados, compromissos e planos de mitigação adotados, que permanecem disponíveis integralmente nos relatórios de inspeção. Por sua vez, a autoridade Russa realizou inspeções nas empresas fabricantes da Sputnik V e possui os relatórios integrais em seus arquivos. No relatório de aprovação, também não há detalhes sobre os compromissos, achados e medidas de mitigação adotadas, sendo relatado que as inspeções foram concluídas sem nenhum comentário.

Importante distinguir que o relatório técnico apresentado visa cumprir os termos da Lei nº 14.124/21 e não superar as lacunas de informação para uma autorização de uso emergencial ou mesmo registro sanitário na Anvisa.

Portanto, trata-se de relatório autêntico, emitido pelo Ministério da Saúde da Rússia, o qual está contemplado entre as autoridades sanitárias definidas no caput do art. 16 da Lei nº 14.124/21 e que declara que a vacina Sputnik V foi aprovada seguindo os critérios adotados pela OMS e ICH.

Apesar das caraterísticas apontadas no documento, a Anvisa não pode, mesmo de posse do relatório exigido em lei, deixar de avaliar aspectos técnicos que vieram ao seu conhecimento e que subsidiaram a decisão anterior desta Diretoria Colegiada, já que a própria norma exige que a agência emita parecer sobre o processo de importação. Tal previsão, coloca a agência diante da obrigação de exercer sua própria missão institucional, também prevista em lei diversa, a Lei nº 9782, que é a de proteger a saúde da população.

Por isso, passarei, a seguir, a apresentar as considerações das áreas técnicas sobre o relatório e a vacina, delas retirando fundamentos para a minha decisão.

2.4 Das considerações das áreas técnicas da Anvisa

Trago aqui a síntese da Nota Técnica nº 66/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA, emitida pela Gerência Geral de Medicamentos e Produtos Biológicos (GGMED), a qual está consubstanciada na apresentação realizada pelo Gerente Geral de Medicamentos e Produtos Biológicos em relação ao relatório técnico emitido pelo Ministério da Saúde da Rússia e que contempla aspectos presentes no referido relatório em confronto com as manifestações técnicas anteriores.

A GGMED reforçou não se tratar de uma avaliação de qualidade, segurança e eficácia de dados da vacina, mas sim quanto aos dados avaliados até o momento e considerando o Relatório Técnico da Rússia.

Sobre os adenovírus replicantes, a área informou que, no relatório da autoridade russa, a especificação do teste de Segurança Específica, responsável por determinar a presença de adenovírus replicantes (RCA) no produto foi alterada de “Não mais que 1000 RCA por dose” para “Não mais que 50 RCA por dose”. O documento informa, ainda, que as normas que determinam a quantidade de adenovírus replicante na vacina Sputnik V estão em total concordância com as recomendações da US-FDA.

Apesar de o relatório fazer menção a recomendações do US-FDA de que 33 RCA a 1000 RCA poderiam ser injetadas no corpo humano, nenhuma referência foi fornecida para estes valores e não foi encontrado guia do US-FDA com tal recomendação. Portanto, não fica claro o racional utilizado pela autoridade russa para aprovar as especificações propostas para a vacina e como a segurança, de tais limites, foi determinada.

O relatório descreve que o produto foi desenvolvido com base em mais de 20 anos de experiência de trabalho com vetores adenovirais e que o desenvolvimento foi baseado em dados obtidos a partir de outras vacinas de adenovírus. No entanto, o relatório não aborda questões críticas do desenvolvimento, como: caracterização de parâmetros de qualidade, impacto das diferenças entre os processos produtivos; avaliação da comparabilidade, mudanças nas metodologias analíticas, mudanças nas especificações e seus respectivos limites, entre outros.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2394

No que se refere à comparabilidade no processo de fabricação, o relatório descreve superficialmente o processo de fabricação e menciona que o escalonamento de biorreatores de 5L até 1.000L foi acompanhado de controle de qualidade do produto acabado e de produtos intermediários. Também menciona a existência de relatório de comparabilidade entre os processos de 5L e 100L e um relatório separado para a escala de 100L e 1000L.

No entanto, o relatório não descreve os parâmetros e critérios utilizados para estabelecer a comparabilidade, não informa quais os lotes avaliados e se seriam da substância ativa, do produto acabado ou ambos e apresenta dados insuficientes de caracterização do produto quanto ao número de lotes, assim como quanto aos parâmetros avaliados pela autoridade Russa.

A GGMED também destacou que o relatório informa que o produto não contém impurezas comuns para vacinas vivas ou atenuadas e que as principais impurezas são controladas no produto, de acordo com as especificações de qualidade na etapa de controle em processo ou no produto acabado. Mas, o relatório não fornece informações sobre remoção ou controle de componentes utilizados no processo de fabricação, além de não apresentar uma avaliação de risco para estabelecer quais seriam os limites tolerados para as impurezas e não demonstrar a eficiência do processo em remover as impurezas.

O relatório da autoridade russa apresentou as especificações do produto acabado e informou a existência de controle de qualidade duplo (realizado pelo Gamaleya e pelo Laboratório Roszdravnadzor Federal Service for Surveillance in Healthcare).

As especificações e controles de qualidade foram baseados na Farmacopeia Russa ou em métodos analíticos internos e, de acordo com o relatório, os parâmetros de qualidade são confirmados por dados de estabilidade e dados de lotes de estudos pré-clínicos e clínicos do medicamento.

Entretanto, o relatório da autoridade russa não descreve se foram apresentadas validações para todas as metodologias internas e se estas estavam de acordo com guias reconhecidos internacionalmente, além de não ficar claro no relatório se testes críticos para determinar a atividade do produto não são realizados (infectividade e avaliação da expressão do transgene de forma direta).

Segundo a autoridade, o perfil de segurança de várias vacinas baseadas em adenovírus recombinantes, desenvolvidas pelo Gamaleya, é comparável. A GGMED informou que o relatório descreve estudos não clínicos conduzidos para avaliação de atividade imunológica e segurança (toxicidade). De acordo com o relatório, foram conduzidos estudos de toxicidade reprodutiva e de biodistribuição.

Não foram apresentadas descrições e análises sobre qual o grau de similaridade que as vacinas descritas em literatura possuem com a Sputnik V para justificar o perfil de segurança. As informações apresentadas sobre os estudos de segurança e toxicidade foram limitadas. Ademais, no relatório não são apresentados dados que demonstrem qual o perfil de biodistribuição e persistência in vivo das partículas virais da vacina Sputnik.

O relatório relata avaliações de quatro estudos clínicos conduzidos com a vacina Sputnik V:

- Estudo fase 1, 02-Gam-COVID-Vac-2020, um estudo aberto para avaliação de segurança, tolerabilidade e imunogenicidade da vacina Gam-COVID-Vac.

- Estudo fase 1, 03-Gam-COVID-Vac Lyo-2020, um estudo aberto para avaliação da segurança e imunogenicidade da vacina liofilizada.

- Estudo fase 2, 05-Gam-COVID-Vac-2020, um estudo aberto para avaliação da segurança, tolerabilidade e imunogenicidade ***em participantes com mais de 60 anos****.*

- Estudo fase 3, 04-Gam-COVID-Vac-2020, um estudo clínico randomizado, duplo-cego, controlado por placebo, multicêntrico em grupos paralelos para avaliação da eficácia, imunogenicidade e segurança da vacina de vetor combinada Gam-COVID-Vac na prevenção da infecção por coronavírus causada pelo vírus SARS-CoV-2.

De acordo com a GGMED, o relatório conclui que 100% dos voluntários do grupo de vacinação com Sputnik V apresentaram resposta imune estável. Também conclui que a vacina tem eficácia de 91,6% para casos sintomáticos e 100% para prevenção de casos graves. Por fim, conclui que a

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2395

vacina em estudo tem um bom perfil de segurança, em particular, sem reações alérgicas graves induzidas pela vacina.

Sobre a imunogenicidade clínica, apenas um subgrupo foi testado e não apresenta o tempo máximo de resultados disponíveis após o esquema de vacinação completo. Também não existe descrição sobre ensaios utilizados para avaliação de respostas imunes e como foram realizadas as validações desses ensaios e não há considerações sobre o poder estatístico aplicado para os resultados do estudo.

O relatório não apresentou a frequência das reações adversas relatadas (raras, incomuns, comuns, muito comuns e não descreveu a metodologia para obtenção dos dados de segurança. Quanto ao estudo de fase 3, estão ausentes informações sobre o desenho, padronização e avaliação dos desfechos de eficácia e segurança, condução do estudo e desvios de protocolo que ocorreram.

Por fim, a GGMED considera que, para atendimento à Lei 14.124/21, para proteção da saúde pública e cumprimento da missão da Anvisa, considerando-se as incertezas técnicas ainda presentes e o cenário da pandemia, a área recomenda a adoção de condicionantes na eventual autorização da importação excepcional, para fins de distribuição e uso em condições controladas pelos estados solicitantes da importação da vacina Sputnik V.

Dessa forma, apresento a seguir os condicionantes propostos pela área técnica:

- Distribuir e utilizar a vacina em condições controladas com condução de estudo de efetividade, com delineamento acordado com a Anvisa e executado conforme Boas Práticas Clínicas, conforme sugerido pelo Ofício CIDSNE/PRESID n. 25/2021 de 25/05/2021;

- Os lotes a serem destinados ao Brasil devem ser provenientes, das plantas produtivas inspecionadas pela Anvisa;

- Lotes importados devem ser aprovados pelo INCQS por meio de análise laboratorial que demonstre a ausência de adenovírus replicante, controle de agentes adventícios, a potência da vacina e também assegure a sua qualidade. É fundamental que sejam disponibilizados os Procedimentos Operacionais Padrão, materiais de referência, protocolos e insumos específicos;

- Contra-Indicação/Restrição de Uso: a vacina não deverá ser utilizada por pessoas com hipersensibilidade a qualquer dos componentes da fórmula, gravidez, lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos 12 meses, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia;

- Contra-Indicação/Restrição de Uso: não poderão receber essa vacina pessoas que tenham recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, que tenham se vacinado nas 4 semanas anteriores, tenham recebido imunoglobulinas ou hemoderivados 3 meses antes, tenham recebido tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, tenham recebido terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos;

- Os estados deverão disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português;

- Os estados deverão estabelecer as ações necessárias para evitar os erros de trocas entre os dois componentes da vacina, devendo haver monitorização e ações contínuas para minimizar o risco e os danos;

- Os estados deverão suspender a importação, distribuição e uso, caso a Anvisa ou a OMS reprovem o uso emergencial da vacina Sputnik V;

- Os estados deverão comunicar amplamente à sociedade que a vacina Sputnik V importada não possui avaliação da Anvisa quanto aos critérios de qualidade, eficácia e segurança.

Por sua vez, a Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS) emitiu a Nota Técnica nº 80/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, a qual também foi consubstanciada na apresentação realizada pela Gerente Geral da área e cujos aspectos principais abordarei a seguir.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2396

A GGFIS destacou que a análise atual teve por base o relatório técnico de aprovação emitido pela Autoridade Russa, o Ofício CIDSNE/PRESID nº 025/2021 enviado pelo Governador do Estado do Piauí e Presidente do Consórcio Nordeste, José Wellington Barroso de Araújo Dias em que apresenta proposições de contingência e Plano de Ação Declaratório.

O relatório técnico de aprovação emitido pela Autoridade Russa afirma que a atuação Regulatória Russa para o registro de vacina atende integralmente os requerimentos recomendados pela OMS e ICH e que o Ministério de Indústria e Comércio Russo é responsável pela emissão dos Certificados de Boas Práticas de Fabricação.

Relatam Inspeção nas plantas: Generium em 14 de Agosto de 2020 e em 09 Fevereiro de 2021; Pharmstandart-UfaVita em 26 de Março de 2021; Medgamal em 25 de Maio de 2018 e 15 Março de 2021, concluindo que as plantas estão autorizadas a fabricar a vacina em seus sites fabris.

Sobre as medidas de contingência propostas no Ofício CIDSNE/PRESID nº 025/2021 – Consórcio do Nordeste, "Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o Instituto Nacional de Controle de Qualidade em Saúde da Fundação Osvaldo Cruz – INCQS/Fiocruz." e "Submissão de todos os lotes da vacina aos devidos testes de controle de qualidade em laboratórios credenciados e aceitos pela Anvisa, incluindo o Instituto Nacional de Controle de Qualidade em Saúde da Fundação Osvaldo Cruz – INCQS/Fiocruz.", a GGFIS relatou que, apesar de ser uma medida adicional de controle, ela sozinha não atende integralmente às necessidades identificadas pela área quando da inspeção sanitária (validação da filtração esterilizante) realizada nas empresas fabricantes da vacina, no caso a Generium S.A. e Pharmstandard UfaVita. A garantia da esterilidade é uma abordagem holística.

A área também relatou os achados da inspeção realizada pela Anvisa, por equipe composta por 5 inspetores que realizaram inspeção in loco no período de 19 a 23 de Abril de 2021 nas seguintes plantas: Generium e Pharmstandart-UfaVita, identificando Não Conformidades Críticas com impacto no produto acabado.

Nesse cenário, a GGFIS propôs a adoção de ações de mitigação de risco e condicionantes referentes aos achados de inspeção não abordados no Relatório de Técnico da Autoridade Russa para atendimento aos Guias da OMS (WHO good manufacturing practices for biological products e WHO good manufacturing practices for sterile pharmaceutical products):

- Adequação das práticas asséptica para garantir a esterilidade do produto e atendimento do item 7.2 do guia da OMS. A comprovação de adequação pode ser enviada à Anvisa ou Autoridade Russa (declaração de cumprimento);

- Apresentação da conclusão da validação da filtração esterilizante, como um dos componentes do sistema de garantia da esterilidade do Produto, item 5.4 do Guia da OMS ou medida adicional de mitigação de risco;

- Conclusão da Validação de Processo do IFA para atendimento do item 15.1 do Guia da OMS. A comprovação pode ser enviada à Anvisa ou Autoridade Russa (declaração de cumprimento);

- Apresentação do relatório de validação da metodologia analítica de controle de qualidade juntamente à documentação a ser enviada ao INCQS.

Como conclusão, a área informa que a Autoridade Sanitária Russa declara que "segue os requisitos da OMS e ICH" e que "as empresas foram inspecionadas sem observações e confirmaram a possibilidade de liberação da vacina pelas plantas fabris" ao encontro do requisito legal de que os produtos importados devem ter qualidade, segurança e eficácia atestadas por meio da comprovação do registro pelas autoridades sanitárias internacionais definidas na Lei 14.124/2021.

As plantas fabris foram também inspecionadas pela Anvisa com observações confirmando a necessidade de correções para o adequado atendimento aos padrões de qualidade da OMS ou do PIC/S e, neste momento, não é possível concluir pelo atendimento pleno dos requisitos de qualidade preconizados pela OMS. Dessa forma, apresentou sugestões de medidas condicionantes de mitigação de risco que poderiam ser aplicadas no contexto de uma importação excepcional em condições controladas,

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2397

considerando o cenário pandêmico no Brasil, onde se verifica escassez de vacinas e insumos; as projeções de evolução da pandemia e a capacidade do sistema de saúde brasileiro.

A Gerência Geral de Monitoramento de Produtos Sujeitos à Vigilância Sanitária (GGMON) emitiu o Despacho nº 77/2021/SEI/GFARM/GGMON/DIRE5/ANVISA, no qual tece as seguintes considerações:

Item 11: Conforme informado no documento, o produto está em uso em 40 países, porém dados de monitoramento pós-vacinação são escassos e indicam fragilidades no processo de farmacovigilância estabelecidos tanto pelo detentor de registro, visto que não foram apresentados dados do uso como resposta ao questionamento levantado. Dados do 10° *Informe de vigilancia de seguridad en vacunas* publicado em 2 de abril de 2021 pelo Ministério da Saúde da Argentina, apontam que a taxa de eventos adversos por 100.000 vacinados é maior para Sputnik V do que de outras vacinas usadas naquele país. Reforça-se que a relação dos países que estão vacinando com Sputnik V sem apresentação dos dados de monitoramento da segurança da vacina nos países listados, não agrega informação para análise pela Gerência Farmacovigilância.

Item 15: no documento russo consta que erros programáticos de trocas entre os dois componentes da vacina não ocorreram na Rússia. A área salienta que a própria organização Mundial de Saúde inclui os erros de vacinação como eventos adversos a serem monitorados pela farmacovigilância dos países signatários, visto que erros ocorrem em todo o mundo. A Argentina afirma, no *10° Informe de vigilancia de seguridad en vacunas* publicado em 2 de abril de 2021 pelo Ministério da Saúde argentino, que os erros programáticos de trocas entre os dois componentes da vacina Sputnik V estavam entre os principais erros naquele país. Os erros ocorrem e devem ser monitorados. O fato de poder acontecer erros não coloca em cheque a segurança do produto, mas deve haver monitorização e ações contínuas para minimizar o risco e os danos.

Item 30: o documento analisado informa que foram apresentados dados de mundo real sobre a vacina Sputnik V. Não foram apresentados, entretanto, dados consistentes de monitoramento da segurança da vacina nos países que utilizam o produto.

A GGMON também se manifestou sobre os aspectos de farmacovigilância e de monitoramento que poderiam ser utilizados para o acompanhamento do uso da vacina no Brasil por meio da Nota Técnica nº 22/2021/SEI/GFARM/GGMON/DIRE5/ANVISA. A área informa que, diante dos dados limitados de pós-mercado sobre a segurança e a efetividade da vacina Sputnik V, recomenda-se fortemente que sejam adotados integralmente os seguintes mecanismos de monitoramento e prevenção de eventos adversos pós-vacinais:

- Bula e orientações de uso, transporte e condições de armazenamento disponibilizadas em idioma português aos profissionais;

- Adoção de monitorização intensiva: os vacinados devem ser monitorados para verificação de desfechos de segurança e efetividade, tais como eventos adversos pós-vacinais, infecção pelo Sars-Cov-2 (incluindo análise de variante do coronavírus), internação por Covid-19, óbito por Covid-19 após a primeira e segunda doses. Deverão ser adotados mecanismos pela coordenação de imunizações, e por instituição independe com reconhecido saber, para rastreabilidade de vacinados e das vacinas aplicadas, incluindo o lote da vacina que foi aplicada em cada um deles, da primeira e da segunda doses, bem como avaliação e reporte dos resultados;

- Notificação de eventos adversos: os eventos adversos graves devem ser comunicados à Anvisa em até 72 horas por meio do sistema VigiMed. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

- Emissão de relatório de avaliação benefício-risco da vacina: o importador deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados de segurança e efetividade (desfechos supramencionados) de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2398

- Monitorização de alertas sanitários internacionais: caberá ao importador acompanhar diariamente alertas internacionais de segurança da vacina Sputnik V emitidos pelos países que estão utilizando a vacina;

- Comunicação de alertas de segurança: a Anvisa deverá ser comunicada imediatamente de alertas de segurança emitidos por outras autorizadas sanitárias internacionais.

Por fim, a GGMON concluiu que, em caso de autorizada de forma excepcional e temporária, recomenda-se fortemente que as medidas de farmacovigilância mencionadas sejam integralmente adotadas pelos importadores, a fim de possibilitar o adequado monitoramento dos vacinados e a celeridade de medidas sanitárias que visem a segurança dos brasileiros.

A Gerência de Laboratórios de Saúde Pública (GELAS), por meio da Nota Técnica nº 26/2021/SEI/GELAS/DIRE4/ANVISA, ressalta que a RDC nº 476/2021 determina, dentre outros requisitos, que os lotes das vacinas importadas somente poderão ser destinadas ao uso após liberação pelo Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da RDC nº 73/2008.

Por sua vez, a RDC nº 73/2008 determina que, imediatamente após internalização da carga no país, deve ser protocolado no INCQS (pelo detentor do registro ou importador) a seguinte documentação constante no Anexo II para avaliação pelo INCQS de forma a subsidiar a liberação dos lotes de vacinas:

"ANEXO II

PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE - Informações Gerais 1. Informações dos Ingredientes Biologicamente Ativos, Excipientes e Produtos Terminados (apresentação, composição, numero de doses produzidas, número de lote, rastreabilidade do produto deste o lote semente até o produto terminado, dentre outras pertinentes) e suas especificações e controles.

2. Todas as etapas dos processos de produção (tais como: cultivo, purificação, inativação e, etc.) e seus respectivos controles de qualidade, além do controle de qualidade do ingrediente biologicamente ativo e do produto terminado (lote final), bem como as especificações de liberação do fabricante, com base nas informações presentes no registro sanitário.

3. Extrato SISCOMEX comprovando a liberação de Importação dos lotes de produto pela ANVISA.

4. Certificado de Liberação do Lote pela Autoridade Sanitária do País de origem."

No entanto, cientes da relevância e urgência do interesse público na disponibilização de lotes de vacina contra a Covid-19, e considerando a competência regimental da GELAS em coordenar as ações de vigilância sanitária realizadas pelos laboratórios que compõem a Rede Nacional de Laboratórios de Vigilância Sanitária, a área informou que tem realizado reuniões entre as empresas detentoras/importadoras das vacinas e o INCQS e solicitado o envio ao INCQS, no tempo mais breve possível, da documentação referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE DE QUALIDADE (PRPCQ) e, se possível, do estudo de estabilidade da vacina, de forma a adiantar a análise, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades.

Por fim, a GELAS informou que, caso as importações sejam aprovadas, a Anvisa encaminhará ofício às Secretarias de Saúde dos Estados de forma a promover o envio imediato da documentação técnica pelo importador ao INCQS. Destacou, ainda, a necessidade do envio pelo importador, no tempo mais breve possível, da documentação, por meio eletrônico ao INCQS, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades. Para tanto, o INCQS designou dois pontos focais, que estão dentre os responsáveis pelas análises: Maria Aparecida Affonso Boller e Ozeias Leitão, para o envio dos documentos em formato eletrônico (incqs.ntpb@fiocruz.br) e para eventuais esclarecimentos.

A GGMON também se manifestou em relação ao Ofício CIDSNE/PRESID nº 025/2021, enviado pelo Consórcio Nordeste, por meio do Despacho nº 102/2021/SEI/GFARM/GGMON/DIRE5/ANVISA. A área entende que, além das medidas de monitoramento sugeridas pelo Consórcio, faz-se necessária a apresentação do mapa de distribuição de

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2399

cada lote aprovado pelo laboratório oficial. Desta forma, a GGMON compreende que houve o compromisso do Consórcio com as medidas de Farmacovigilância sugeridas pela área técnica. Ainda, sugeriu que haja compromisso do importador em estimular o registro imediato de eventos adversos por parte de profissionais de saúde e cidadãos.

Por fim, a GGMON destacou que o sistema e-SUS Notifica do Ministério da Saúde apresenta elevada sensibilidade para a detecção de eventos adversos pós vacinais, enquanto o sistema VigiMed da Anvisa é mais específico, o que possibilita a atuação sanitária oportuna.

A partir de todo o exposto pelas áreas técnicas desta Agência, minha avaliação será conduzida a fim de considerar todas as observações apontadas e respectivas medidas mitigatórias necessárias. Ademais, acrescentarei à minha análise aspectos de saúde pública que apresentarei adiante.

2.5 Do cenário internacional

A vacina possui registro e/ou autorização de uso emergencial concedido por três das autoridades sanitárias listadas no caput do art. 16 da Lei: Ministry of Health of the Russian Federation, da Federação da Rússia; Central Drugs Standard Control Organization (CDSCO), da República da Índia; e Administración Nacional de Medicamentos, Alimentos y Tecnología Médica (ANMAT), da República Argentina.

A vacina Sputnik V está autorizada em 68 países, os quais, em sua maioria, se tratam de países sem tradição de maturidade e robustez regulatórias.

A fim de obter informações sobre o uso da vacina em outros países, a assessoria internacional da Agência enviou o Ofício nº 54/2021/SEI/AINTE/GADIP/ANVISA ao Ministério das Relações Exteriores (MRE). Como resposta, foi recebido o Ofício nº 09116.000921/2021-82 do MRE com as atualizações quanto ao status internacional de imunização com a Sputnik V.

Percebe-se que o cenário global sobre a utilização da Sputnik V não alterou significativamente, desde a última deliberação da Anvisa. Destaco o reporte da autoridade sanitária da Índia, CDSCO; a entidade informou que a segurança, eficácia, imunogenicidade e reatogenicidade da vacina foram avaliados pelo CDSCO juntamente com o comitê de especialistas. O CDSCO avaliou os dados de estudos clínicos submetidos pelo solicitante, incluindo os dados publicados no “The Lancet” e estudos ponte de fase II e fase III conduzidos na Índia com 1.600 participantes. Os dados interinos de segurança e imunogenicidade do dia 42 foram comparáveis com os dados gerados no estudo clínico na Rússia. Com base nos dados submetidos, a autorização para uso restrito em situação de emergência foi concedida.

Na Sérvia, os dados de vacinação com a Sputnik V demonstraram um perfil de segurança elevado, sem registro de eventos adversos sérios, sem relatos de mortes relacionadas à vacinação e sem casos de trombose venosa cerebral observados.

Um outro estudo conduzido pela Universidade Nacional de Córdoba na Argentina (https://static.poder360.com.br/2021/05/Estudo-Argentina.pdf) mostrou uma boa resposta na produção de anticorpos IgG contra SARS-CoV-2 na coorte de 285 pessoas imunizadas com a vacina Sputnik V. No dia 14, após a primeira dose da vacina, 85,5% da coorte apresentava anticorpos contra o vírus e no dia 42, após receber a segunda dose, 99,65% apresentavam anticorpos.

Os resultados demonstram a importância de se administrar a segunda dose da vacina para aqueles que não tiveram exposição prévia ao vírus, visto que não apenas a proporção de indivíduos com anticorpos IgG anti S total é maior, mas também o título de anticorpos neutralizantes (AcNT) aumenta significativamente neste grupo no dia 42 pós-vacinação.

O estudo também demonstrou que a vacina Sputnik V tem eficácia de proteção contra a variante P.1 do coronavírus a partir da análise de plasma de 157 pessoas (entre as quais há amostras de indivíduos recuperados de infecção natural por SARS-CoV-2 cepa de tipo selvagem B.1 e de pessoas vacinadas com Sputnik V que tiveram ou não exposição anterior ao vírus). Em todas as categorias avaliadas, observou-se neutralização da variante P.1.

Por fim, destaco ainda que a Anvisa recebeu documento com posicionamento da Comissão Nacional de Segurança em Vacinas (CoNaSeVa) sobre a segurança de vacinas contra a Covid-19. O

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2400

documento informa que, desde o início da Campanha Nacional de Vacinação contra a Covid-19 na Argentina, foram notificados, até 9 de abril de 2021, ao Sistema Integrado de Informação em Saúde da Argentina (SIISA), 29.232 eventos supostamente atribuíveis à vacinação e imunização (ESAVI) após a aplicação de 5.493.153 doses das vacinas: Sputnik V 3.414.158 (62%); Covishield 587.816 (10%), Sinopharm 1.295.940 (23,5%) e Oxford University / AstraZeneca 195.239 (3,5%).

O documento reporta que, dos eventos relatados, 99,05% (28.952) foram leves e moderados e 280 (0,95%) foram hospitalizados para avaliação. A vacinação com a Sputnik V foi a primeira a ser implantada na Argentina, dando início à Campanha Nacional em 29 de dezembro de 2020 e é o imunizante mais utilizado até hoje. Houve 25.426 eventos relacionados à vacina Sputnik V (taxa = 744 / 100.000 doses) que consistiam em: febre, dor de cabeça, mialgia, artralgia, reações locais, diarreia, vômito, náusea e alergia. Anafilaxia (0,02%) foi registrada em pessoas com histórico de alergia grave que não tenha sido referido no ato da vacinação. Embora a taxa de eventos após a aplicação da vacina Sputnik V seja alta, a maioria dos eventos foi leve ou moderado e ocorreu nas primeiras 72 horas da aplicação da vacina com recuperação integral, o que representa um perfil de segurança adequado para seu uso.

3. DA IMPORTAÇÃO DA VACINA COVAXIN

3.1 Relatório

Analisa-se o pedido de autorização para importação excepcional da vacina Covaxin, nos termos da Lei nº 14.124, de 10 de março de 2021, pelo Ministério da Saúde.

O pedido excepcional de importação está ancorado no Contrato 29/2021 celebrado entre o Ministério da Saúde (MS) e a empresa BHARAT BIOTECH LIMITED INTERNATIONAL, representada pela empresa PRECISA COMERCIALIZAÇÃO DE MEDICAMENTOS LTDA, CNPJ: 03.394.819/0005-00, para aquisição de 20.000.000 (vinte milhões) de doses da Vacina COVAXIN/BBV152, divididas em 05 (cinco) parcelas de 4.000.000 (quatro milhões) cada.

Conforme disposto no Ofício nº 129/2021/DLOG/SE/MS, a vacina fabricada pela BHARAT BIOTECH INTERNATIONAL LIMITED (BBIL), localizada na Índia, não possui registro sanitário junto a Agência Nacional de Vigilância Sanitária (ANVISA) e o pedido está apoiado na autorização de uso emergencial concedida pela Autoridade Sanitária da Índia.

O pleito ora em análise foi recebido no Sistema Eletrônico de Informações (SEI) da Anvisa no dia 24/05/2021. Aqui cabe destacar que a Anvisa já deliberou sobre pedido anterior do Ministério da Saúde para importação excepcional da vacina Covaxin, por ocasião da Reunião Extraordinária Pública – RExtra 5/2021, realizada no dia 31/3/2021. Na oportunidade, a Diretoria Colegiada decidiu, por unanimidade, negar a autorização excepcional e temporária para importação e distribuição da vacina COVAXIN/BBV152, solicitada pelo Ministério da Saúde, nos termos do voto do relator.

Ao avaliar o pleito anterior de importação da vacina Covaxin pelo Ministério da Saúde, diante da ausência do relatório técnico de avaliação emitido pela autoridade sanitária da Índia, a Anvisa precisou prospectar informações para subsidiar sua deliberação. Nesse sentido, a análise foi baseada nas informações provenientes de processos em curso na Agência, como os pedidos de certificação de Boas Práticas de Fabricação e de condução de estudos clínicos no Brasil. Todos esses dados foram levados em consideração para que a Anvisa pudesse emitir o parecer preconizado pela Lei nº 14.124/21.

Dessa forma, a Anvisa precisou considerar para sua decisão o fato de ter tido acesso à documentação técnica apresentada para análise do Dossiê de Desenvolvimento Clínico do Medicamento (DDCM), protocolado pela empresa Precisa, e a realização de inspeção de registro *in loco* na empresa Bharat Biotech, fabricante da vacina em sua totalidade (substância ativa e produto terminado).

A partir da análise dos dados de qualidade, segurança e eficácia constantes no DDCM, não foi possível, naquele momento, concluir quanto ao perfil de benefício-risco da vacina.

Sobre o cumprimento das Boas Práticas de Fabricação, a empresa fabricante Bharat Biotech International Limited, Índia, foi inspecionada pela Anvisa de 01/03/2021 a 05/03/2021 para a fabricação da Vacina Covaxin (vacina inativada e adsorvida contra SARS-CoV-2). Durante a inspeção, foram constatadas não conformidades e as medidas adotadas pela empresa até aquele momento não

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2401

foram suficientes para mitigar os riscos associados às não conformidades apontadas na inspeção. Dessa forma, foi publicado o indeferimento do pedido de Certificação de Boas Práticas de Fabricação de Medicamentos da empresa fabricante Bharat Biotech, conforme Resolução RE nº 1.297, de 29 de março de 2021.

Diante dos fatos expostos, nos termos do Voto nº 99/2021/SEI/DIRE5/ANVISA, a Diretoria Colegiada da Anvisa decidiu, por unanimidade, negar a autorização excepcional e temporária para importação e distribuição da vacina COVAXIN/BBV152, solicitada pelo Ministério da Saúde, no dia 31/03.

Portanto, a decisão anterior foi tecida a partir da análise da documentação do DDCM e do resultado da inspeção de Boas Práticas de Fabricação (BPF) no fabricante da vacina.

Para o presente processo administrativo, foram apresentados os seguintes documentos:

- Ofício contendo solicitação de autorização excepcional para importação de 20.000.000 (vinte milhões) de doses da vacina Covaxin;

- Declaração atestando tratar-se de importação de vacina contra Covid-19 nos termos da Lei 14.124/21 e RDC/ANVISA 476, de 10 de março de 2021 artigo 12 inciso I;

- Comprovação da autorização de uso emergencial da vacina emitida pela autoridade sanitária da Índia;

- Declaração atestando a adoção das estratégias de monitoramento e cumprimento das diretrizes de Farmacovigilância nos termos da RDC/ANVISA 476, de 10 de março de 2021, artigo 12 inciso III e Anexo;

- Comprovação da autorização de uso emergencial da vacina emitida pela autoridade sanitária do México, Cofepris;

- Comprovação do peticionamento do pedido de certificação de Boas Práticas de Fabricação (BPF) referente ao fabricante do insumo farmacêutico ativo (IFA);

- Comprovação do peticionamento do pedido de certificação de Boas Práticas de Fabricação (BPF) referente ao produto acabado;

- Relatório referente ao Plano de Ações corretivas e preventivas necessárias à adequação às Boas Práticas de Fabricação (CAPA);

- Segundo relatório interino referente ao estudo clínico de fase III;

- Declaração da empresa Precisa Medicamentos atestando que todas as doses a serem enviadas ao Brasil estarão em concordância com todas as ações aplicadas ao relatório CAPA, sendo todas produzidas após 15 de abril de 2021 e com validade em acordo com produção, promovendo tempo razoável para aplicação pelo programa PNI do Ministério da Saúde;

- Documentação técnica requerida pelo Guia nº 42/2020.

* * *

Depreende-se que, dos documentos apresentados no novo pedido de importação, não consta o relatório técnico da vacina preconizado pela Lei nº 14.124/21 e pela RDC nº 476/21, da Anvisa.

No entanto, um conjunto robusto de documentos foram apresentados à agência, como contrapartida da ausência do relatório técnico da vacina. Por sua vez, o desenvolvedor realizou sucessivas reuniões de trabalho com as áreas técnicas da Anvisa a fim de tentar sanar as lacunas provenientes da inexistência de tal relatório.

Nesse sentido, o nosso exame inicial se volta a identificar em que medida as lacunas de informação relatadas por mim no dia 31/03 foram superadas. Para melhor compreensão desse caminho, considero ser importante, de forma bastante geral e resumida, apresentar quais os aspectos novos apresentados pelo desenvolvedor da vacina.

Após a decisão da Agência, o Ministério da Saúde e a empresa Precisa Medicamentos permaneceram em tratativas com a Anvisa, realizando reuniões com as Diretorias e áreas técnicas, a fim de superar os motivos que levaram à não anuência da importação no pedido anterior.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2402

Com a Quinta Diretoria, foram realizadas duas reuniões institucionais nos dias 09/04 e 15/04 e três reuniões de pré-submissão, nos dias 16/04, 19/05 e 24/05. Nessas reuniões, tanto aspectos da instrução do processo para autorização de importação, como documentos técnicos novos foram extensivamente debatidos, numa demonstração de boa fé e de esforço técnico do requerente, buscando as adequações necessárias para uma nova submissão.

Ademais, as seguintes reuniões foram realizadas com outras áreas da Anvisa: 07/04/2021 – Reunião ANVISA (DIRE5 e DIRE4) – Pauta: Autorização Excepcional; 19/04/2021 – Reunião GGFIS – Pauta: Nova proposta de CBPF; 29/04/2021 – Reunião GGMED – Pauta: DDCM e DEEC; e 30/04/2021 – Reunião ANVISA – Autorização Excepcional.

Após as discussões nas referidas reuniões e diante da ausência do relatório técnico de avaliação emitido pela autoridade sanitária da Índia, a empresa submeteu, por meio dos expedientes nºs 1214929212 e 1219797211 (DDCM) e 1809912212, 1812880217 e 181255429 (Submissão Contínua), a documentação técnica requerida pelo Guia nº 42/2020, que dispõe sobre os requisitos mínimos para submissão de solicitação de autorização temporária de uso emergencial, em caráter experimental, de vacinas Covid-19. A empresa submeteu, também, novos protocolos para certificação de Boas Práticas de Fabricação: para a linha de produtos estéreis, efetuado por meio do expediente nº 1998936/21-0 em 24/05/21, e para o insumo farmacêutico ativo (IFA), efetuado por meio do expediente nº 2014094/21-7 em 25/05/21.

Portanto, no que se refere à certificação de Boas Práticas de Fabricação (CBPF), a empresa realizou as adequações necessárias, as quais culminaram nos novos pedidos de certificação, conforme será descrito adiante.

Ademais, as adequações promovidas pela empresa em relação ao pedido de condução de estudo clínico no Brasil resultaram na anuência do Dossiê de Desenvolvimento Clínico de Medicamento (DDCM) e na anuência em Processo de Pesquisa Clínica de ORPC's para a vacina BBV152, as quais foram publicadas pela Anvisa por meio da Resolução RE nº 1.938, de 13 de maio de 2021. Dessa forma, será possível a Anvisa acompanhar de forma bastante próxima o uso da vacina no Brasil no âmbito do estudo clínico, adotando as medidas sanitárias cabíveis caso necessário.

A solicitação do estudo clínico foi realizada pela empresa Precisa Farmacêutica. A fabricante da vacina é o laboratório Bharat Biotech. O estudo autorizado é de fase 3, randomizado, duplo-cego, controlado por placebo, multicêntrico, para avaliar a eficácia, a segurança, a imunogenicidade e a consistência entre lotes de BBV152, uma vacina de vírion inteiro inativado contra Sars-CoV-2, em adultos com idade igual ou superior a 18 anos de idade.

Ficará a cargo da Sociedade Beneficente Israelita Brasileira Hospital Albert Einstein a responsabilidade por conduzir o estudo clínico no Brasil.

O estudo prevê a aplicação de duas doses, com 28 dias de intervalo. A previsão é de que 4.500 voluntários sejam envolvidos no Brasil, em oito centros de ensaio clínico, incluindo 625 participantes do próprio centro do Hospital Albert Einstein.

Para esta autorização, a área técnica analisou os dados das etapas anteriores de desenvolvimento da vacina, incluindo estudos não clínicos in vitro e em animais, bem como dados preliminares de estudos clínicos em andamento. Os resultados obtidos até o momento demonstraram um perfil de segurança aceitável da vacina.

Também cabe destacar que a empresa já iniciou as tratativas junto ao Instituto Nacional de Controle de Qualidade em Saúde (INCQS) a fim de apresentar toda a documentação requerida pela RDC nº 73/2008 para liberação dos lotes da vacina a serem utilizados no Brasil.

Portanto, pode-se concluir que a desenvolvedora acatou de forma substancial as recomendações e orientações da Anvisa, além de demonstrar avanços de forma ativa durante as tratativas com a Agência.

Diante, contudo, da inexistência de relatório técnico emitido pela autoridade estrangeiro, remanescem aspectos a serem considerados nesta avaliação.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2403

Como já antecipei no caso da Sputnik, as incertezas ainda existentes nesta avaliação devem ser sopesadas a partir de outras variáveis, em especial o cenário sanitário e epidemiológico do país na atualidade.

3.2 Da vacina Covaxin

A vacina Covaxin foi desenvolvida pela empresa farmacêutica indiana Bharat Biotech em colaboração com o Conselho Indiano de Pesquisa Médica, um instituto de pesquisa biomédica financiado pelo governo, e sua subsidiária, o Instituto Nacional de Virologia.

A Bharat Biotech produz outras 14 vacinas, incluindo para rotavírus, hepatite B, zika vírus e Chikungunya. Quatro das vacinas fabricadas pela empresa (vacina contra poliomielite oral trivalente, vacina contra poliomielite oral bivalente, vacina rotavírus e vacina contra febre tifóide) são pré-qualificadas pela Organização Mundial da Saúde (OMS).

A Covaxin foi aprovada pela primeira vez em 12 de janeiro de 2021 para uso restrito em emergência no modo ensaio clínico. Posteriormente, o modo de ensaio clínico foi dispensado em 11 de março de 2021 e a Covaxin foi aprovada para "uso restrito em situação de emergência de interesse público".

A plataforma de vacina de vírus inteiro inativada **é a plataforma de fabricação mais bem estabelecida para a produção de vacinas**. A Covaxin utiliza essa plataforma clássica para produzir imunidade contra a Covid-19, a partir de partícula viral do SARS-CoV-2 infecciosa completa que consiste em RNA envolto por uma casca de proteína, mas modificada para que não possa se replicar. Isso significa que o coronavírus é “morto”, removendo dele sua capacidade de se replicar no corpo, mas ainda é reconhecido pelo organismo, que pode criar defesas em uma situação segura e preparar-se contra uma infecção real.

A Covaxin se apresenta como um líquido translúcido branco livre de material particulado contendo 6 mcg de Antígeno do Coronavírus Inativado (cepa NIV-2020-770).

A vacina Covaxin é indicada para a imunização ativa para prevenir a COVID-19 causada pelo vírus SARS-CoV-2, em indivíduos com 18 anos ou mais. O uso da vacina deve estar de acordo com as recomendações oficiais.

A vacina deve ser administrada em duas doses no Dia 0 e Dia 28 por via de administração intramuscular (IM).

As contraindicações consistem em: hipersensibilidade a qualquer um dos constituintes da vacina; mães grávidas e lactantes; durante a febre ou infecção grave; e indivíduos menores de 18 anos.

Por sua vez, as seguintes advertências e precauções especiais de utilização devem ser observadas: não administrar por via intravenosa, intradérmica ou subcutânea; como todas as outras vacinas, supervisão e tratamento médico apropriado devem estar sempre disponíveis para tratar quaisquer reações anafiláticas após a imunização; e o vacinado deve permanecer sob supervisão médica por pelo menos 30 minutos após a vacinação.

Antes do uso, a vacina deve ser bem agitada para se obter uma suspensão translúcida esbranquiçada e uniforme. O frasco deve ser verificado visualmente quanto à presença de partículas ou outra coloração, se houver, antes de sua administração.

A vacina deve ser armazenada de 2-8ºC e não deve ser congelada. O prazo de validade da vacina é de 6 meses a partir da data de fabricação.

A vacina pode ser apresentada como dose única (0,5 mL) ou como multidose (5 mL e 10 mL). Após abertura do frasco, a vacina deve ser utilizada o quanto antes e dentro de, no máximo, 6 horas quando armazenada de 2-8ºC.

3.3 Das considerações das áreas técnicas da Anvisa

A Gerência Geral de Medicamentos e Produtos Biológicos (GGMED) se manifestou por meio da Nota Técnica nº 62/2021/SEI/GPBIO/GGMED/DIRE2/ANVISA, na qual informou que não há estudo de fase 3 concluído para a referida vacina. Foram apresentados para a Anvisa, nos dois processos

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2404

de solicitação de importação excepcional pelo Ministério da Saúde, relatórios interinos de estudo de fase 3 conduzido na Índia, referentes a duas análises interinas, que ainda não permitem a conclusão de forma definitiva sobre a eficácia e segurança da vacina sob a perspectiva daquela gerência. Também existem estudos clínicos de fases 1 e 2 concluídos, cujos resultados foram publicados.

Informou que a documentação apresentada inclui documento emitido pela Organização Central de Controle de Padrões de Medicamentos/ Diretoria-Geral de Serviços de Saúde do governo da Índia, referente à permissão para fabricar Vacina SARS-CoV-2 Inativada com Vírion Inteiro (BBV152) para uso restrito em situação de emergência, com descrição de aprovação inicial em 03/01/2021 e alterações da permissão em 11/03/2021. Foi também apresentada documentação emitida pela Comissão Federal de Proteção contra Riscos Sanitários, COFEPRIS, do governo do México, de 06/04/2021, referente à autorização emergencial provisória da vacina Covaxin.

A GGMED informou que houve solicitação de realização de ensaio clínico por meio da submissão do DDCM (processo: 25351.259546/2021-59) protocolizado em 30/03/2021 pela empresa Precisa Comercialização de Medicamento LTDA. O DDCM foi anuído, conforme publicação no DOU nº, 89-A, RE nº 1.938, de 13/05/2021. Porém, para inicialização do estudo, foi emitido um Termo de Compromisso (enviado à empresa por meio do ofício: 1853158210).

O estudo clínico a ser realizado no Brasil é uma continuidade do estudo da Índia. Trata-se de um estudo clínico Fase 3, denominado “Estudo orientado por eventos, de fase 3, randomizado, duplo-cego, controlado por placebo, multicêntrico, para avaliar a eficácia, segurança, imunogenicidade e consistência entre lotes de BBV152, uma vacina de vírion inteiro inativado contra SARS-CoV-2, em adultos ≥18 anos de idade”. O estudo tem como objetivo primário avaliar a eficácia de BBV152B versus placebo para prevenir COVID-19 sintomática. O desfecho será por meio da primeira ocorrência de casos de COVID-19 sintomática confirmados virologicamente (RT-PCR positivo). No dia 20/05/2021, foi realizada reunião com a empresa para discussão das condicionantes do Termo de Compromisso relacionadas à parte clínica. De acordo com a empresa, seria realizada a revisão de casos graves e assintomáticos tanto no Brasil quanto na Índia, de modo a categorizá-los também pelos critérios OMS e FDA, com uma posterior análise de sensibilidade.

Não houve solicitação para aprovação de uso emergencial ou registro para a vacina Covaxin até o momento. Dados sobre a vacina Covaxin estão em análise pelo procedimento de submissão contínua.

A GGMED informou não ter conhecimento de alerta referente à qualidade, eficácia e segurança da vacina emitido até o momento.

A apresentação, que há pouco assistimos, sintetiza os principais aspectos apontados pela área técnica, os quais destaco abaixo.

A gerência afirma: que o exame realizado não é uma avaliação de qualidade, segurança e eficácia de dados da vacina; que a vacina possui um adjuvante novo, imidazoquinolina, ou IMDG, não utilizado ainda comercialmente em nenhuma vacina aprovada no mundo. Esse adjuvante é um agonista do receptor Toll-like (TLR) 7/8 e tem potencial relação com desenvolvimento de doença autoimune; que o tempo de acompanhamento médio declarado era de cerca de 45 dias. Esse tempo é insuficiente uma vez que é consenso internacional um acompanhamento mínimo dos participantes de pelo menos 2 meses para comprovação de perfil de segurança e eficácia; que foram apresentados dados de estudo de estabilidade de longa duração (2-8°C) de até 5 meses para 1 lote de desenvolvimento e de até 3 meses para lotes comerciais. Segundo os documentos apresentados, os testes relacionados ao 6º mês de armazenamento dos lotes comerciais devem ser executados em 05/2021; que há ainda pendência nos estudos clínicos, quanto à disponibilização de resultados-chave para o estabelecimento da relação benefício-risco da vacina Covaxin, especificamente, quanto à avaliação de imunogenicidade e o relatório interino de segurança.

Nesse sentido, a gerência, considerando elemento de proteção à saúde pública e cumprimento da missão da Anvisa, considerando as incertezas técnicas ainda presentes e o cenário da pandemia, recomenda a adoção de condicionantes na eventual autorização da importação excepcional,

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2405

para fins de distribuição e uso em CONDIÇÕES CONTROLADAS PELO MINISTÉRIO DA SAÚDE da vacina Covaxin.

Para tanto, sugere: que devem ser apresentados os resultados de imunogenicidade e relatório clínico de segurança, conforme datas declaradas pela representante no Brasil; que os lotes a serem destinados ao Brasil devem ser provenientes das plantas produtivas inspecionadas pela Anvisa; que os lotes importados devem ser aprovados pelo INCQS por meio de análise laboratorial que demonstrem a potência da vacina, o conteúdo antigênico e também assegurem a sua qualidade - é fundamental, ainda, que sejam disponibilizados os Procedimentos Operacionais Padrão, materiais de referência, protocolos e insumos específicos; que se imponha contra-indicação ou restrição de uso - a vacina não deverá ser utilizada por pessoas com hipersensibilidade a qualquer dos componentes da fórmula, gravidez, lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos 12 meses, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia; não poderão receber essa vacina pessoas que tenham recebido outra vacina contra Covid-19, que tenham febre, HIV, hepatite B ou C, que tenham se vacinado nas 4 semanas anteriores, tenham recebido imunoglobulinas ou hemoderivados 3 meses antes, tenham recebido tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação 36 meses antes, tenham recebido terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos (em resumo, só adultos saudáveis estariam aptos a receber a vacina).

A área condiciona ainda que o Ministério da Saúde: disponibilize às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português; suspenda a importação, distribuição e uso, caso a Anvisa ou a OMS reprovem o uso emergencial da vacina Covaxin; comunique amplamente à sociedade que a vacina Covaxin importada não possui avaliação da Anvisa quanto aos critérios de qualidade, eficácia e segurança.

A Gerência Geral de Inspeção e Fiscalização Sanitária (GGFIS) se manifestou por meio da Nota Técnica nº 85/2021/SEI/COINS/GIMED/GGFIS/DIRE4/ANVISA, na qual informou ter recebido novos pedidos de certificação para a empresa Bharat Biotech International Limited (Hyderabad/Índia), protocolados através dos expedientes 1998936210 (Linha Estéril), em 24/05/2021, e 2014094217 (IFA), em 25/05/2021. A área também analisou os últimos documentos enviados em 31/05/2021, referentes às não conformidades (NC) restantes detectadas na inspeção de 01-05/03/2021, NC maior nº 1 e NC maior nº 10.

As informações da referida Nota Técnica também foram manifestadas durante a apresentação da Gerente Geral da área e eu apresentarei, a seguir, os principais aspectos.

Para a análise atual, foram considerados os dois novos pedidos de certificação para o IFA Biológico e Vacina, nos quais a empresa apresentou novas evidências relativas às não conformidades que ensejaram a emissão do relatório com resultado Ação Oficial Determinada (AOD) e subsidiaram a decisão anterior da Diretoria Colegiada.

A área destacou que a empresa corrigiu a maioria das não conformidades apontadas pela equipe técnica e apresentou evidências dessas correções, incluindo os itens que ensejaram a negativa anterior, ressaltando que tais itens foram cumpridos integralmente quanto aos requisitos de BPF:

- Inclusão de Teste de Potência específico e controle para impurezas no produto acabado;

- Validação da Inativação Viral no IFA biológico;

- Ajustes na validação da Filtração Esterilizante.

A GGFIS informou que os expedientes 1998936/21-0 e 2014094/21-7 receberam exigências técnicas e foram apresentados dados adicionais referentes aos ajustes sobre a validação da vida útil da resina e controles ao longo de seu reuso. Tal item foi cumprido integralmente quanto aos requisitos de BPF.

Os protocolos e relatórios de validação dos métodos analíticos para quantificação de antígeno (proteína S) para o IFA e determinação da potência (imunogenicidade em camundongos) para a

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2406

vacina (produto terminado) foram apresentados. A GGFIS informou que os parâmetros de testes estão conforme a regulamentação. A empresa demonstrou capacidade em executar o programa de validação, dentro dos requisitos de BPF. Os resultados detalhados dos estudos são analisados pela área de registro quando da aprovação. Portanto, esse item foi cumprido integralmente quanto aos requisitos de BPF.

Por fim, a GGFIS conclui que a Bharat Biotech cumpriu com todos os itens pendentes relacionados às Boas Práticas de Fabricação que ensejaram a negativa do pedido de importação excepcional anterior, permitindo que a área sugira a Autorização da Importação Excepcional. Adicionalmente, a Bharat Biotech apresentou plano de ação adequado e cumpriu com todas as pendências relacionadas ao pedido de certificação de Boas Práticas de Fabricação.

Adicionalmente, a Bharat Biotech apresentou plano de ação adequado e cumpriu com todas as pendências relacionadas ao pedido de certificação de Boas Práticas de Fabricação.

A Gerência Geral de Monitoramento de Produtos Sujeitos à Vigilância Sanitária (GGMON) se manifestou sobre a vacina por meio do Despacho nº 310/2021/SEI/GGMON/DIRE5/ANVISA, no qual relatou que as informações sobre reações adversas com a vacina Covaxin foram descritas em bula aprovada pela autoridade sanitária indiana. Não há, nesta bula, reações adversas que destoem do perfil das demais vacinas. Entretanto, salientou que não foram obtidos dados de pós-mercado para analisar resultados de segurança após uso na vida real.

A área também informou que não foram encontrados alertas de segurança emitidos por organismos internacionais e que não foram encontrados registros junto à base de dados mundial VigiLyze para a vacina Covaxin.

Por fim, a GGMON ressaltou que o momento epidemiológico nacional reforça a necessidade do estabelecimento de estratégias robustas para promover rastreio de casos assintomáticos pela testagem, engajamento da população quanto às medidas não farmacológicas e a disponibilidade de vacinas para a imunização em massa da população brasileira, a fim de reduzir o impacto da doença sobre a saúde coletiva, sobretudo em relação às populações mais vulneráveis.

Apesar da escassez de dados relacionados ao pós uso em outros países e da ausência de registros de eventos adversos na base internacional, a área considera importante mencionar que **a vacina utiliza uma plataforma clássica para produzir imunidade contra a Covid-19**, utilizando vírus inativado para provocar o sistema imunológico do vacinado para a produção de anticorpos e células T contra o Sars-Cov-2. Tal plataforma tende a ser mais segura.

De acordo com a GGMON, esse conjunto de fatos e informações pode contribuir para a tomada de decisão da diretoria colegiada da Anvisa quanto aos benefícios e riscos e, se autorizada, a área recomenda fortemente que sejam adotados integralmente os seguintes os mecanismos de monitoramento e prevenção de eventos adversos pós-vacinais por parte do Ministério da Saúde, abaixo relacionados:

- Bula e orientações de uso, transporte e condições de armazenamento disponibilizadas em idioma português aos profissionais de saúde;

- Adoção de monitorização intensiva: os vacinados devem ser acompanhados para verificação de desfechos de segurança e efetividade, tais como eventos adversos pós-vacinais, infecção pelo Sars-Cov-2 (incluindo análise de variante do coronavírus), internação por Covid-19, óbito por Covid-19 após a primeira e segunda doses. Deverão ser adotados mecanismos pela coordenação de imunizações, e por instituição independe com reconhecido saber, para rastreabilidade de vacinados e das vacinas aplicadas, incluindo o lote da vacina que foi aplicada em cada um deles, da primeira e da segunda doses, bem como avaliação e reporte dos resultados;

- Notificação de eventos adversos: os eventos adversos graves devem ser comunicados à Anvisa em até 72 horas por meio do sistema VigiMed. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

- Emissão de relatório de avaliação benefício-risco da vacina: o importador deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2407

de segurança e efetividade (desfechos supramencionados) de cada lote importado, detalhando, segundo as boas práticas de farmacovigilância;

- Monitorização de alertas sanitários internacionais: caberá ao importador acompanhar diariamente alertas internacionais de segurança da vacina Covaxin emitidos pelos países que estão utilizando a vacina;

- Comunicação de alertas de segurança: a Anvisa deverá ser comunicada imediatamente de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

- Compartilhamento imediato do mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados.

Por fim, a GGMON informou que a Anvisa e o Ministério da Saúde têm trabalhado em estreita colaboração no monitoramento dos eventos adversos pós vacinais, favorecendo a adoção conjunta de medidas sanitárias de forma imediata, quando necessário.

A Gerência de Laboratórios de Saúde Pública (GELAS) se manifestou por meio do Despacho nº 157/2021/SEI/GELAS/DIRE4/ANVISA, no qual informa que a RDC nº 476/21, dentre outros requisitos, determina no Art. 9º que os lotes das vacinas importadas somente poderão ser destinados ao uso após liberação pelo Instituto Nacional de Controle de Qualidade em Saúde (INCQS), conforme a RDC nº 73/2008. E ainda, que cabe ao importador apresentar a documentação ao INCQS para esta liberação.

Por sua vez, a RDC nº 73/2008 determina que, imediatamente após internalização da carga no país, deve ser protocolado no INCQS (pela COADI/MS, detentor do registro ou importador) o PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE (anexo II da RDC) para avaliação pelo INCQS de forma a subsidiar a liberação dos lotes de vacinas.

Assim, cientes da relevância e urgência do interesse público na disponibilização de lotes de vacina contra a COVID-19, a GELAS tem realizado reuniões entre as empresas detentoras/importadoras das vacinas e o INCQS e solicitado o envio ao INCQS, no tempo mais breve possível, da documentação referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE DE QUALIDADE (PRPCQ) e, se possível, do estudo de estabilidade da vacina, de forma a adiantar a análise.

Em relação à vacina Covaxin, a GELAS realizou reuniões com o INCQS e representantes da empresa Precisa Medicamentos para esta solicitação, nos dias 31/03/21 e 05/05/21.

Diante do exposto, a área esclareceu que, caso a importação em caráter excepcional da vacina Covaxin seja aprovada, os lotes importados devem ser liberados pelo INCQS para o uso no Brasil, conforme determinado nas RDCs nº 73/2008 e nº 476/2021. A empresa Precisa Medicamentos está ciente desta necessidade e conforme reuniões realizadas, a empresa apresentou informações sobre a documentação que atende ao exigido para a análise documental pelo INCQS, referente ao PROTOCOLO RESUMIDO DE PRODUÇÃO E CONTROLE, de forma a adiantar a análise, para que, no momento oportuno, essa etapa de análise para a liberação dos lotes da vacina seja superada sem dificuldades.

Por fim, a GELAS destacou que a empresa tem ainda pendente a apresentação junto ao INCQS do documento sobre a metodologia para a determinação da Potência ou Conteúdo antigênico da vacina. A empresa Precisa informou no dia 25/05 que está encerrando a validação dos métodos de potência e antígeno, e até o dia 27/05 enviará o retorno a todos os questionamentos do INCQS.

A partir de todo o exposto pelas áreas técnicas desta Agência, minha avaliação será conduzida a fim de considerar todas as observações apontadas e respectivas ações mitigatórias necessárias. Ademais, acrescentarei à minha análise aspectos de saúde pública que apresentarei adiante.

4. DO CENÁRIO EPIDEMIOLÓGICO E SANITÁRIO DO BRASIL

São incontroversos e notórios o recrudescimento das taxas de contaminação do coronavírus, o aumento do número de internações e de mortes em decorrência da pandemia da Covid-19.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2408

O momento atual vem se mostrando ainda mais dramático diante das evidências científicas de novas cepas, mutações e variantes do Coronavírus.

Em recentes decisões, o Supremo Tribunal Federal tem afirmado, diante do quadro pandêmico, que não é constitucionalmente aceitável qualquer retrocesso nas políticas públicas de saúde (ADI N. 6341, Rel. Min. Marco Aurélio, redator p/acórdão Min. Edson Fachin, Plenário).

A Anvisa, como agente regulador, se coloca nesse contexto, também como agente indutor de políticas. A finalidade institucional de promover a proteção da saúde da população alcança perspectivas diversas de atuação.

Além das atividades típicas de regulação, a atuação da Anvisa reflete diretamente na condição de saúde da população, pois estamos tratando, na ponta da linha, do adoecimento ou não das pessoas, do seu bem-estar e, sobretudo, da preservação de suas vidas.

O contexto sanitário que o nosso país atravessa nos põe diante da necessidade de viabilizar o maior número de vacinas e medicamentos. Todo esforço se volta ao propósito de amenizar o sofrimento da população, abrandar a angústia dos gestores públicos e combater o esgotamento dos nossos profissionais de saúde.

De acordo com dados disponibilizados pelo Ministério da Saúde em 22/05/21 (https://susanalitico.saude.gov.br/extensions/covid-19_html/covid-19_html.html), o Brasil registra 15.970.949 casos de Covid-19 acumulados (7.600 por 100 mil hab), sendo 76.855 casos novos registrados nas últimas 24 horas. Quanto a óbitos, o Brasil registra 446.309 mortes acumuladas desde o início da pandemia (212 por 100 mil hab) e 2.215 nas últimas 24 horas.

Conforme boletim epidemiológico da Organização Mundial da Saúde (OMS), publicado em 4 de maio de 2021, e o Painel da OMS, o número global de casos da Covid-19 permanece nos níveis mais altos desde o início da pandemia, com mais de 5,4 milhões de novos casos semanais, após nove semanas consecutivas de aumentos. Os novos óbitos nos últimos sete dias continuam em ascendência pela sétima semana consecutiva, totalizando mais de 89.000 mortes. Globalmente, a Índia é o país que apresenta o maior número de novos casos e novos óbitos, nos últimos sete dias. Em seguida à Índia, aparecem Brasil e Estados Unidos da América.

O Brasil, embora tenha 2,7% da população mundial, até 15 de maio respondeu por 9,6% dos casos e 12,9% dos óbitos mundiais por Covid-19. Tendo como referência os dados disponíveis no site *Our World in Data* (https://ourworldindata.org/coronavirus) até 15 de maio, dos países com pelo menos 100 mil óbitos acumulados, o Brasil encontrava-se em segundo lugar, com 439 mil mortos, sendo superado apenas pelos EUA, com 587 mil. Os seis países logo abaixo do Brasil eram Índia (283.248), México (220.746), Reino Unido (127.953), Itália (124.497), Rússia (114.619) e França (108.201). Dos novos óbitos por milhão de habitantes, de acordo com a média móvel nos últimos sete dias neste conjunto de países, o Brasil se encontrava em primeiro lugar, com 9,01, sendo seguido pela Índia (3,01), Itália (2,87), Rússia (2,5), França (2,34), EUA (1,81), México (1,58) e Reino Unido (0,13). Analisando os novos óbitos de acordo com a média móvel nos últimos sete dias é possível constatar que, com exceção da Índia, que começou a apresentar um crescimento exponencial de casos no início de abril, todos os outros países listados anteriormente apresentaram tendência de queda. O Brasil, que desde meados de fevereiro vinha apresentando tendência de crescimento de óbitos, e, no período entre 9 de março (1.572 óbitos) e 25 de abril (2.494 óbitos), esteve em primeiro lugar, apresenta, entretanto, um quadro preocupante.

De acordo com a OMS (https://covid19.who.int/), considerando-se o número de casos confirmados nos últimos sete dias, o Brasil, com 460.105 casos, aparece em 2º lugar no mundo, atrás apenas da Índia. O mesmo ocorre ao considerarmos os casos confirmados nas últimas 24 horas, em que o Brasil registrou a triste marca de 82.039 casos, também atrás apenas da Índia.

Em número de mortes, o cenário se repete. O Brasil aparece em 2º lugar, atrás da Índia, com cerca de 2.403 mortes diárias. Nos últimos sete dias, a Índia registrou 29.318 mortes por Covid-19, o Brasil registrou 13.677 mortes e os Estados Unidos, que aparecem em 3º lugar, registraram 3.969 mortes. Portanto, é gritante a diferença entre as vidas perdidas diariamente no Brasil e nos demais países do mundo.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2409

O momento pelo qual o Brasil atravessa é absolutamente crítico, com evolução negativa do contexto epidemiológico relacionado à pandemia de SARS-CoV-2, ocupando ainda lugar de destaque entre os países com maior número de casos e mortes cumulativos.

Apesar do esforço por medidas sanitárias em todo o País, com número significativo de cidades, especialmente, capitais, implementando restrições mais rígidas, percebe-se que a adesão da população às medidas eficazes ao controle da disseminação do vírus tem-se demostrado aquém do esforço necessário à superação do contexto epidemiológico atual.

Não há dúvida de que vivenciamos o pior momento da crise sanitária provocada pela Covid-19.

Os índices de novos casos da doença alcançam patamares muito elevados em todas as regiões, estados e municípios. Parece ter se tornado rotina assistirmos aos números da pandemia nos jornais, anunciando mais de 2.000 vidas perdidas a cada dia, que juntas já somam mais de 450 mil brasileiros e brasileiras levados por essa doença.

Mas não são apenas números, são vidas, famílias, histórias. Após 15 meses de pandemia no Brasil, posso afirmar que não há um cidadão sequer que não tenha sido afetado, seja pela dor, sofrimento, medo, ou mesmo pela séria crise econômica e social resultante dessa pandemia.

Para agravar esse cenário, a projeção de dados sugere que o Brasil poderá vivenciar a terceira onda epidemiológica da infecção pela Covid-19, entre junho e julho de 2021, com a circulação concomitante de outros vírus respiratórios - Síndrome Respiratória Aguda Grave - e de outras variantes, alcançando novo pico de mortes em 04 de julho, caso ocorra continuidade do relaxamento de medidas não farmacológicas e permaneça no mesmo ritmo a velocidade da vacinação no país. E a cada rodada estatística vamos para um nível ainda mais alto de contaminação e morte.

Segundo o Instituto de Métricas e Avaliação em Saúde, da Universidade de Washington, nos Estados Unidos, com base nos dados observados até 25 de abril, a projeção de óbitos tende a apresentar uma importante alteração no cenário nacional, entre o outono e o inverno. Estima-se que essa “terceira onda” seja agravada pelo esgotamento social das medidas não farmacológicas e a velocidade da vacinação, alcançando o pico de mortalidade entre os dias 09 de junho e 04 de julho de 2021. Adicionalmente, deve-se considerar a possibilidade de circulação da variante B.1.617 no Brasil, bem como a circulação de outros vírus respiratórios concomitantemente, nesse período. Cabe, ainda, ressaltar que o primeiro pico da pandemia no Brasil se deu justamente nos meses de inverno nas regiões Sul, Sudeste e Centro-Oeste. De acordo com a projeção, o Brasil deve alcançar 575.635 mortes devido à Covid-19 até o dia 1° de agosto de 2021. Alguns especialistas acham que esse número é ainda conservador.

De acordo com o Boletim do Observatório Covid-19 referente ao período de 2 a 15 de maio de 2021, divulgado pela Fiocruz (https://portal.fiocruz.br/sites/portal.fiocruz.br/files/documentos/boletim_covid_2021-semanas_18-19-red.pdf), as taxas de incidência, que refletem os casos novos de Covid-19, permanecem em um platô alto. Ao mesmo tempo, nas últimas semanas foi observada uma preocupante mudança nas tendências das notificações por Síndrome Respiratória Aguda Grave (SRAG), que são atualmente em grande parte devido a infecções por Sars-CoV-2. Muitos estados que tiveram redução de casos de SRAG nas semanas anteriores apresentam tendência de reversão ou mesmo um aumento no número de casos. Esse novo padrão epidemiológico pode ser resultado de uma conjunção de fatores como a vacinação de populações de maior risco, uma pequena redução da ocupação de leitos hospitalares, bem como o já sinalizado processo de rejuvenescimento da pandemia, de modo que, pela primeira vez para o Brasil, a mediana de idade do total de casos internados e também nas UTIs está abaixo dos 60 anos.

Esse novo cenário socioepidemiológico é preocupante, quando considerado o ritmo ainda lento de vacinação no país e com a introdução de novas variantes do vírus SarsCoV-2 no Brasil, como a B.1.617 identificada inicialmente na Índia. Além disso, a flexibilização de medidas não-farmacológicas pode intensificar a transmissão, com a geração de casos graves e óbitos nas próximas semanas, pressionando os serviços de saúde ainda sobrecarregados e com limitações para reposição de estoques

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2410

de medicamentos e insumos. Nesse sentido, é premente a intensificação de ações de vigilância e prevenção em saúde.

De acordo com os números, o ano de 2021 apresenta uma dinâmica da pandemia de maior aceleração da incidência e mortalidade. Além disso, os dados de internação vêm, a cada semana, identificando o rejuvenescimento da pandemia, com deslocamento da curva em direção a faixas etárias mais jovens.

Vale reforçar que o rejuvenescimento, por um lado, pode ser uma expressão da eficácia da vacinação, ao notar uma retração na contribuição de idosos nos casos e óbitos nas semanas mais recentes. Adicionalmente, este diagnóstico significa que as gerações mais jovens, que passam a contribuir de forma mais importante para o cenário da pandemia, passarão a apresentar maior ocorrência de síndromes pós-COVID e situações de COVID longa, comprometendo assim de forma crônica sua qualidade de vida e sua capacidade para atividades cotidianas, incluindo o trabalho.

A mensagem é clara: é preciso olhar para os mais jovens, e incluí-los no plano de vacinação com a brevidade necessária.

O novo Boletim do Observatório Covid-19, divulgado no dia 26/05, alerta para o recrudescimento da pandemia nas próximas semanas. Mostra que houve um aumento das taxas de incidência de casos novos da covid-19 entre 16 e 22 de maio. O boletim ressalta que o aumento no número de internações, demonstrado pelo novo aumento das taxas de ocupação dos leitos de UTI é resultado desse novo quadro da pandemia no Brasil. Esse boletim mostra, também, que, entre os dias 17 e 24 de maio de 2021, as taxas de ocupação de leitos de unidade de terapia intensiva (UTI) de Covid-19 para adultos no Sistema Único de Saúde (SUS) aumentaram ou se mantiveram estáveis, em níveis elevados, em praticamente todo o Brasil. Isso reforçaria a avaliação de que a tendência de queda, que vinha sendo observada até por volta do dia 10 deste mês, se interrompeu.

Ratificando os dados do Boletim da Fiocruz, a análise de dados dos boletins epidemiológicos divulgados pelo governo de São Paulo indica uma aceleração no número de mortes por Covid-19 entre pessoas com 69 anos ou menos. Por outro lado, nas faixas etárias mais velhas as mortes continuam ocorrendo, porém, em uma velocidade menor. Essa inversão da pirâmide de mortes já havia sido detectada pela plataforma SP Covid-19 Info Tracker, ferramenta criada por pesquisadores da USP e da Unesp com apoio da Fapesp (Fundação de Amparo à Pesquisa no Estado de São Paulo) para acompanhar a evolução da pandemia no estado. Os fatores para a inversão podem estar relacionados ao efeito das variantes, especialmente a P1, que começa a provocar impactos mais sérios nas faixas mais jovens, e o avanço da vacinação na categoria dos mais idosos em detrimento dos mais jovens, o que reforça a importância da vacinação.

Sobre o surgimento de variantes, todos os vírus, incluindo o SARS-CoV-2, evoluem com o tempo. Quando um vírus se replica ou faz cópias de si mesmo, às vezes muda um pouco, o que é normal para um vírus. Essas mudanças são chamadas de "mutações". Um vírus com uma ou mais novas mutações é referido como uma "variante" do vírus original. E quando um vírus está amplamente circulando em uma população e causando muitas infecções, a probabilidade de o vírus sofrer mutação aumenta. Quanto mais oportunidades um vírus tem de se espalhar, mais ele se replica – e mais oportunidades ele tem de sofrer mudanças. Dependendo de onde as alterações estão localizadas no material genético do vírus, elas podem afetar as propriedades de um vírus, como a transmissão (por exemplo, pode se espalhar mais ou menos facilmente) ou gravidade (por exemplo, pode causar doenças mais ou menos graves).

Dessa forma, impedir a propagação do vírus é o objetivo que se impõe, a fim de prevenir mutações que possam afetar a dispersão e virulência do Sars-Cov-2. As medidas atuais para reduzir a transmissão – incluindo lavagem frequente das mãos, uso de máscara, distanciamento físico, boa ventilação e evitar locais lotados ou ambientes fechados – continuam trabalhando contra a disseminação de novas variantes, reduzindo a quantidade de transmissão viral e, portanto, também reduzindo oportunidades para o vírus sofrer mutação.

Contudo, ampliar a imunização é sem dúvida a maneira mais eficiente de não expor as pessoas ao vírus e ao risco de novas variantes. À medida que mais pessoas são vacinadas, espera-se que a

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2411

circulação do vírus diminua, o que levará a menos mutações virais.

Atualmente, existem três principais variantes de atenção do SARS-CoV-2 sob vigilância nos países (WHO weekly epidemiological update on COVID-19 - 4 May 2021):

- VOC 202012/01 (B.1.1.7), comunicada em 14 de dezembro de 2020 por autoridades do Reino Unido, e já identificada em 142 países;

- VOC 501Y.V2 (B.1.35197), comunicada por autoridades da África do Sul em 18 de dezembro de 2020, e já identificada em 97 países;

- VOC P.1 (B.1.1.28.1), identificada inicialmente no Japão, em 9 de janeiro de 2021, em quatro viajantes procedentes do Brasil e que estiveram em Manaus/AM. Dias depois, pesquisadores brasileiros a identificaram em amostras de pacientes em Manaus/AM. Essa VOC já está disseminada em 56 países.

Ademais, em 10 de maio, a OMS declarou como variante de atenção global a linhagem B.1.617, relatada inicialmente na Índia em dezembro de 2020. A modelagem preliminar pela OMS sugere que a variante B.1.617 tem uma taxa de crescimento mais alta do que outras variantes circulantes na Índia, sugerindo um potencial aumento de transmissibilidade, com outras variantes co-circulantes também demonstrando maior transmissibilidade. Essa variante já foi identificada em 49 países nas seis regiões da OMS (WHO weekly epidemiological update on COVID-19 - 11 May 2021).

No Brasil, a epidemia de SARS-CoV-2 iniciou a partir de duas linhagens, a VOC B.1.1.28 (P1) e a variante B.1.1.33. Através da análise de 217 sequências completas do genoma SARS-CoV-2, no estudo *Genomic monitoring unveil the early detection of the SARS-CoV-2 B.1.351 lineage (20H/501Y.V2) in Brazil*, os pesquisadores observaram prevalência da variante de atenção P1 (Brasil) com 64,05%, seguida da variante B.1.1.28 com 25,34%. Nesse contexto, o aumento da transmissibilidade, que já foi associado às VOC, sugere um maior número de casos positivos, internações e mortalidade observados no Brasil.

O relaxamento das medidas de proteção e a circulação de novas cepas do vírus podem propiciar o agravamento da crise sanitária e social. O recrudescimento da epidemia em diversos estados leva, por sua vez, conforme temos assistido, ao colapso de seus sistemas de saúde. Infelizmente, a baixa cobertura vacinal e a lentidão na oferta de vacinas ainda não permitem que esse quadro possa ser revertido em curto prazo. O atual cenário da crise sanitária vivida pelo país agrava o estado de emergência nacional e exige medidas urgentes e adequadas para sua superação.

As vacinas constituem a ferramenta mais eficaz e barata na batalha contra a Covid-19, com benefícios claros e imediatos para a saúde pública e para preservação das vidas.

As vacinas em uso atualmente no Brasil são: Coronavac/Sinovac, autorizada para o Instituto Butantan, Covishield/Univ.Oxford/Astrazeneca, autorizada para a Fiocruz, e Comirnaty, autorizada para a Pfizer. No dia 31/03/2021, foi aprovada para uso emergencial a vacina da Janssen, mas esta ainda não está disponível para uso no Brasil.

Até o dia 15/05/21, estimava-se terem sido vacinadas 38.719.727 pessoas com a 1ª dose, cobrindo 24,19% da população brasileira a ser vacinada, e 19.153.355 com a 2ª, 11,97%, conforme o Instituto de Comunicação e Informação Científica e Tecnológica em Saúde – ICICT. A população vacinada ainda não impactou globalmente na pandemia no Brasil. Há registros de casos em todos os municípios, atingindo a taxa de 212 óbitos para cada 100 mil habitantes.

Para agravar esse cenário, nos últimos dias, a imprensa noticiou o atraso no fornecimento do insumo farmacêutico ativo (IFA) para fabricação das vacinas Coronavac e Covishield no Brasil, o que pode prejudicar ainda mais o avanço da campanha de imunização. O Instituto Butantan confirmou que atrasará o cumprimento do contrato para fornecimento de doses da Coronavac ao Ministério da Saúde devido aos atrasos no envio de insumo proveniente da China. A Fiocruz, por sua vez, também informou que precisaria suspender a produção do imunizante pela falta do IFA. A vacina da Pfizer, dadas as suas características de conservação, possui requerimentos específicos de distribuição e logística, o que dificulta seu uso por todas as regiões do país. Portanto, o que se vê ainda é um cenário de fragilidade no abastecimento de vacinas para imunização da população brasileira.

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2412

Ademais, de acordo com a imprensa, o Ministério da Saúde reduziu para 43,8 milhões a previsão de doses de vacinas contra a Covid a serem distribuídas em junho. Anteriormente, a estimativa era de 52,2 milhões de doses. Essa mudança ocorreu, principalmente, devido a dificuldades na obtenção de insumos usados pela Fiocruz para a fabricação da vacina.

Outro ponto de preocupação reside em uma possível necessidade de incremento de 3ª dose de algumas vacinas contra a Covid-19, a fim de aumentar a eficácia do imunizante e ampliar a geração de anticorpos nos vacinados. A dose extra pode ser necessária, também, para aumentar proteção contra as novas variantes. Esse cenário demandaria um aumento expressivo na disponibilização dos já escassos imunizantes, reforçando a importância na ampliação das vacinas disponíveis à população.

O agravamento da pandemia afeta negativamente, também, os serviços públicos brasileiros, em especial os de saúde, e outros setores importantes da economia brasileira.

O conjunto de dados apresentados revela que o Brasil se encontra ainda em um momento de grave crise no enfrentamento da pandemia.

Como sabemos, faltam vacinas, o que, claro, implica saturação do sistema de saúde, mais doentes e, infelizmente, o aumento do número de mortes.

O momento é de crise sanitária sem precedentes na história recente da humanidade e do país.

Tal cenário nos convoca a medidas ordinárias e extraordinárias no enfrentamento da pandemia. Além da cooperação institucional e convergência de esforços, é papel da Anvisa, nesse contexto, e no exercício de suas atribuições, ser agente provedor e indutor de todas as alternativas terapêuticas e soluções vacinais necessárias à contenção da disseminação do vírus e à defesa da saúde da população.

5. DAS CONSIDERAÇÕES FINAIS QUE ANTECEDEM O VOTO

De todo o exposto, percebe-se que estamos sim, diante de uma situação excepcional. Talvez, excepcionalíssima. E, nesses casos excepcionais, podem ser necessárias adequações no modelo tradicional de vigilância sanitária, com o consequente e proporcional fortalecimento dos mecanismos de controle pós-mercado.

Infelizmente, o cenário é de emergência de saúde pública epidemiológica, de caráter nacional, decretada pela Portaria nº 188, de 3 de fevereiro de 2020 pelo Senhor Ministro.

E, corroborando com tal fato, tivemos a edição da Lei nº 14.124, de 10 de março de 2021, que dispõe sobre as medidas excepcionais relativas à aquisição de vacinas e de insumos e à contratação de bens e serviços de logística, de tecnologia da informação e comunicação, de comunicação social e publicitária e de treinamentos destinados à vacinação contra a covid-19 e sobre o Plano Nacional de Operacionalização da Vacinação contra a Covid-19.

Como agentes públicos que somos, no pleno exercício de nossos mandatos nesta Agência, não podemos ignorar este fato superveniente.

Não podemos negar nem diminuir os instrumentos regulatórios vigentes e que foram solidamente construídos para garantir acesso à imunização em um momento de escassez de vacinas.

As informações sobre as incertezas das vacinas são todas públicas desde o dia 17 janeiro de 2021. Ali reconhecemos a importância ainda maior da transparência; ali reconhecemos a necessidade de compartilhar com o país as nossas dificuldades e fragilidades.

Seguiremos assim, em consonância com o que a Lei nº 9.782/99 nos determina: a Agência terá por finalidade institucional promover a proteção da saúde da população, por intermédio do controle sanitário da produção e da comercialização de produtos e serviços submetidos à vigilância sanitária. E entendo ser exatamente isso que estamos fazendo diante da importação excepcional para fins de distribuição e uso da vacina em condições controladas e bem definidas.

O cenário atual da Emergência de Saúde Pública e as projeções para os próximos meses, sobretudo frente ao agravamento da pandemia no nosso País, da manutenção dos altos índices de

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2413

mortes diárias e da limitada disponibilidade de imunizantes no mundo, reforçam a urgência na disponibilização de vacinas, indo ao encontro do objetivo do legislador e do interesse público no acesso a vacinas, na preservação de vidas, na diminuição do sofrimento das pessoas e no combate ao vírus.

A vacinação é uma das intervenções de saúde pública mais custo-efetivas e seus benefícios são indiscutíveis, podendo ser exemplificados pela erradicação da varíola e da poliomielite na maioria dos países do mundo. O sucesso da vacinação contra a Covid-19, e sua necessária celeridade, estão intimamente relacionados com a disponibilidade de quantidades de vacinas suficientes para serem aplicadas a toda a população passível de imunização.

Os dados mostram que as chances de ser internado ou morrer com o SarsCoV-2 caem drasticamente depois da imunização completa. As novas variantes do SarsCoV-2, algumas mais transmissíveis, são outro fator de atenção. Ainda não se sabe com precisão se as vacinas disponíveis são capazes de combater todas as novas versões do patógeno. Importante lembrar que a vacinação não busca proteção individual, mas sim coletiva.

Uma vacina com pelo menos 50% de eficácia tem um impacto significativo sobre a doença, tanto em nível individual quanto social. As vacinas submetidas ao crivo da importação superam significativamente esse patamar de eficácia, conforme asseguram as autoridades estrangeiras.

Precisamos falar não apenas da eficácia da vacina, mas também da sua efetividade. A eficácia é um fenômeno individual, mas, em programas amplos de vacinação, os não imunizados são, também, protegidos pelos vacinados. Isso reflete a efetividade da vacina e trata-se de imunidade coletiva. Se a população for coberta pela vacina, ela estará protegida. Ressalto: nenhuma vacina é 100% eficaz, mas dada uma ampla cobertura do processo de vacinação, ela protege a população.

Em publicação científica recente, foi demonstrado que, depois que as pessoas são vacinadas contra a Covid-19, os níveis de anticorpos bloqueadores de infecção em seu sangue são um forte indicador de quanta proteção eles ganharam contra a doença, usando método de modelagem (Khoury, D. S. et al. Nature Med. https://doi.org/10.1038/s41591-021-01377-8 (2021). A pesquisa mostrou que mesmo a presença de pequenas quantidades desses potentes 'anticorpos neutralizantes' indica que uma vacina é eficaz na proteção contra a Covid-19.

A análise de dados de anticorpos neutralizantes a partir de testes com sete vacinas amplamente utilizadas (mRNA-1273, NVX-CoV2373, BNT162b2, rAd26-S+rAd5-S, ChAdOx1 nCoV-19, Ad26.COV2.S e CoronaVac) mostrou uma forte ligação entre os níveis de anticorpos dos participantes registrados em estudos em estágio inicial e os resultados de eficácia da vacina em estudos em estágio final. Os pesquisadores estimam que uma vacina tenha eficácia de 50%, mesmo que induza níveis de anticorpos 80% inferiores aos encontrados, em média, em uma pessoa que se recuperou da Covid-19.

Os pesquisadores preveem que, como os níveis de anticorpos diminuem com o tempo, as vacinas de reforço podem ser necessárias em cerca de um ano, mas a proteção contra doenças graves pode durar muitos anos, mesmo sem eles. Tais dados reforçam, ainda mais, a importância da imunidade induzida pelas vacinas na proteção da população.

No nosso contexto, o senso de urgência torna-se parâmetro relevante, pois sabemos que, a cada dia, são pelo menos 2.000 vidas perdidas. Nossas avaliações, portanto, refletem a preocupação com o drama da vida real. Estamos mobilizados e guiados por elevado espírito de preservação da vida. Nossos julgamentos estão contaminados pela lógica da sobrevivência humana em nosso país.

Queremos vacinas e medicamentos. Somos uma agência conhecida por viabilizar o acesso. E, no presente caso, precisamos dar cumprimento ao mandamento legal, que nos impôs os critérios a serem adotados para a autorização de importação de vacinas autorizadas em outros países. Não nos cabe questionar o preceito legal. Em situação de guerra, todas as armas visam combater o inimigo e, ao mesmo tempo, salvar vidas.

Sabemos que ainda existem lacunas de informação quanto aos aspectos de qualidade, segurança e eficácia das vacinas Sputnik V e Covaxin. Mas, mesmo diante das incertezas ainda presentes, preciso não apenas considerar o diploma legal que reflete o desejo do legislador em ampliar a

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2414

disponibilidade de vacinas e medicamentos contra a Covid-19 no Brasil, como também enxergar o dramático quadro sanitário em que estamos inseridos.

As manifestações das áreas técnicas da Anvisa consideraram, por formação e condicionantes técnicas, a documentação submetida no âmbito de um processo de autorização de uso emergencial ou de registro. Portanto, nossos especialistas se ativeram aos limites de sua atuação ao realizarem uma avaliação robusta de qualidade, segurança e eficácia. No entanto, entendo que, nós diretores precisamos ter uma visão mais ampla desses pedidos de importação, precisamos sopesar na balança do risco-benefício o cenário sanitário e epidemiológico de nosso país, o cumprimento dos dispositivos legais, as ações mitigatórias propostas pelas áreas técnicas relacionadas às lacunas de informação, as responsabilidades do importador. Importante lembrar que, como última etapa no paradigma do risco, temos a avaliação das ações de controle de riscos realizadas, a fim de permitir a tomada de decisão do regulador.

Reforço que no presente Voto não estamos avaliando a autorização de uso emergencial. Também não estamos avaliando o registro sanitário da vacina. Tais avaliações contemplariam uma análise robusta de qualidade, segurança e eficácia. Aqui, estamos avaliando tão somente as circunstâncias para autorizar a importação em caráter excepcional das vacinas, de forma absolutamente controlada, à luz do cumprimento da Lei que trouxe esse instrumento regulatório como mais uma possibilidade no enfrentamento à pandemia.

E repito: o tripé da qualidade, segurança e eficácia que guia nossas decisões, que norteia nosso trabalho, neste caso foi atestado por meio da comprovação do registro ou uso emergencial pela autoridade sanitária internacional, conforme estabelecido pela RDC nº 476/2021.

Somos um país de muitas possibilidades e de riquezas naturais e humanas únicas. Isso, contudo, ainda não nos transformou numa nação rica e plenamente desenvolvida. As desigualdades são a melhor expressão das nossas deficiências. As limitações ainda são enormes.

O nosso gigantismo, a territorialidade continental, é uma variável perene e complexa. Prover medicamentos e vacinas, assegurar leitos, garantir o bem-estar das pessoas em todos os recônditos do país, é um desafio também gigante.

Esse binômio, limitação de recursos/gigantismo nos convoca à reflexão permanente. Tudo para nós acontece em grande escala.

Por sua vez, a verdade é que não conhecemos ainda os exatos rumos dessa pandemia, nem mesmo conhecemos a exata capacidade humana para lidar com todos os desdobramentos que ainda poderão sobrevir, e que devem ser suportados pela humanidade.

A solução farmacológica, heroica, conhecida é vacina. Múltiplas plataformas estão em desenvolvimento, com níveis de maturidade distintos. Plataformas que hoje são aparentemente estruturadas podem se enfraquecer ao longo da caminhada, ao soluço de algum tropeço não esperado.

Temos que lançar mão de alternativas. Não podemos desperdiçar opções vacinais, seja por que temos que considerar os sobressaltos da jornada, seja por que mais opções podem significar também estímulo à produção dessas plataformas em território nacional, como já acompanhamos por notícias recentes.

Essa não é uma decisão sobre vacinas apenas “do hoje”; estamos aqui pensando no amanhã. Pesa o receio de fulminar plataformas que podem vir a ser viáveis; não é inteligente descartá-las.

Nesse sentido, tenho por oportuno, observadas as condicionantes de controle apontadas pelas áreas técnicas, considerar uma utilização controlada, segura e inicial dessas vacinas no Brasil, desde que, dentre outras limitações, restrinja-se o público vacinado, limite-se a importação inicial a um volume pequeno e imponha-se teste laboratorial para certificação dos aspectos relevantes já suscitados neste voto. Nesse formato, ainda, que se estabeleça regime de vigilância capaz de interromper imediatamente a importação e a utilização da vacina.

6. **DO VOTO**

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2415

6.1 – Processo de importação:

A Gerência Geral de Portos, Aeroportos, Fronteiras e Recintos Alfandegados (GGPAF) se manifestou por meio do Despacho nº 710/2021/SEI/GGPAF/DIRE5/ANVISA, no qual informou que, de acordo com a RDC nº 476/2021, a importação de vacinas que tenham recebido autorização de uso emergencial por uma das autoridades estrangeiras contempladas na Lei nº 14.124/2021 poderá ser realizada conforme definido em seu art. 16.

Sendo assim, em caso de aprovação da excepcionalidade pela Diretoria Colegiada, caberá ao importador providenciar:

I. Peticionamento eletrônico de importação, nos termos do Capítulo III, Seção I, da Resolução de Diretoria Colegiada - RDC nº 81, de 5 de novembro de 2008;

II. A descrição da mercadoria na licença de importação deve conter a inscrição "AUTORIZADA CONFORME A LEI nº 14.124, DE 2021";

III. Apresentação do comprovante de autorização excepcional e temporária de importação concedida pela Diretoria Colegiada da Anvisa;

IV. Certificado de liberação do lote, incluindo o laudo analítico de controle de qualidade do produto acabado e, quando existir, do diluente, emitido pelo fabricante;

V. Conhecimento de carga embarcada, podendo, na instrução processual inicial, ser apresentada versão preliminar desse documento; e

VI. Licenciamento de importação (LI) registrado no SISCOMEX

Para que se reduza o tempo de permanência das vacinas na área alfandegada, é recomendável que o processo de importação seja peticionado com antecedência à chegada da carga no Brasil, conforme disposto no art. 4º da Resolução RDC nº 476/2021. Para o peticionamento deverá ser utilizado o código de assunto 9611 - Fiscalização Sanitária para o Ministério da Saúde ou entidades vinculadas ao SUS, de mercadorias sob vigilância sanitária, destinado a programa de saúde pública.

Outras orientações sobre os procedimentos e etapas para o peticionamento do processo de importação podem ser obtidas na Cartilha do Peticionamento Eletrônico de Importação - PEI, que pode ser acessada no Portal da Anvisa no seguinte endereço: https://www.gov.br/anvisa/pt-br/centraisdeconteudo/publicacoes/portos-aeroportos-e-fronteiras/cartilha-pei-usuario-externo-versao-4.3/view.

Por fim, a área informou que a anuência na importação é concedida para a quantidade de doses descritas no licenciamento de importação (LI), portanto, em caso de importações fracionadas deverá ser realizado um peticionamento para cada LI registrada junto ao Siscomex.

6.2 – Obrigações dos requerentes:

De acordo com a RDC nº 476/2021, são obrigações do importador:

I - responsabilizar-se pela qualidade, eficácia e segurança da vacina a ser importada;

II - assegurar e monitorar as condições da cadeia de transporte;

III - assegurar que a vacina importada esteja com o prazo de validade vigente;

IV - estabelecer mecanismos para garantir condições gerais e manutenção da qualidade da vacina importada e o seu adequado armazenamento;

V - assegurar o monitoramento contínuo da temperatura de conservação e transporte, durante o trânsito internacional, desde o momento do embarque até a chegada ao local de armazenamento do importador e notificar à Anvisa, imediatamente, caso tenha ocorrido excursão de temperatura que possa comprometer a qualidade do produto;

VI - responsabilizar-se pela avaliação das excursões de temperatura que venham a ocorrer durante o transporte dos produtos importados;

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2416

VII - prestar orientações aos serviços de saúde sobre uso e cuidados de conservação dos produtos importados, assim como aos pacientes sobre como notificar as queixas técnicas e eventos adversos a eles relacionados;

VIII - criar mecanismos para a realização do monitoramento pós-distribuição e pós-uso da vacina importada e para que os casos de queixas técnicas e eventos adversos identificados sejam informados à Anvisa, por meio dos sistemas de informação adotados;

IX - responsabilizar-se pelo recolhimento do produto importado quando determinado pela Anvisa ou quando houver indícios suficientes ou comprovação de desvio de qualidade, que possa representar risco à saúde;

X - informar aos pacientes de que a vacina para Covid-19 não possui registro e nem autorização temporária para uso emergencial, em caráter experimental, concedido pela ANVISA e que o referido produto apenas possui aprovação em agência regulatória sanitária estrangeira; e

XI - apresentar a documentação requerida ao Instituto Nacional de Controle de Qualidade em Saúde (INCQS), nos termos da Resolução de Diretoria Colegiada - RDC nº 73, de 21 de outubro de 2008.

6.3 – Condicionantes para importação da vacina Sputnik V:

I – Todos os lotes a serem destinados ao Brasil devem ser provenientes das plantas produtivas inspecionadas pela Anvisa: Generium e Pharmstandard UfaVita;

II – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos certificados de análise da etapa de concentrado da vacina e do produto acabado, demonstrando a ausência de RCA;

III – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos laudos de esterilidade microbiológica;

IV – A vacina deverá ser utilizada apenas na imunização de indivíduos adultos ≥ 18 anos e < 60 anos;

V – A vacina não deverá ser utilizada em gestantes, puérperas, lactantes e indivíduos com comorbidades;

VI – Os lotes das vacinas importados somente poderão ser destinados ao uso após análise laboratorial e liberação pelo INCQS;

VII – O requerente deverá registrar a execução de todas as obrigações previstas na RDC nº 476/2021 e reforçadas neste Voto. Tais registros deverão ser apresentados à Anvisa sempre que solicitado;

VIII – O requerente deverá considerar no plano de imunização as ações necessárias para evitar os erros programáticos de trocas entre os dois componentes da vacina, devendo haver monitorização e ações contínuas para minimizar o risco e os danos;

IX – O requerente deverá adotar ações de mitigação de risco considerando as diferenças de informações e formatos entre as embalagens, rótulos e bulas originais em comparação com as diretrizes regulatórias nacionais;

X – O requerente deverá disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português. Destaca-se que todas as indicações, contraindicações e restrições de uso constantes neste Voto deverão estar refletidas no documento a ser disponibilizado;

XI – Todos os lotes da vacina a ser fornecida devem atender às condições aprovadas pela autoridade sanitária internacional;

XII – O requerente deverá distribuir e utilizar a vacina em condições controladas com condução de estudo de efetividade, com delineamento acordado com a Anvisa e executado conforme Boas Práticas Clínicas, de acordo com o sugerido pelo Ofício CIDSNE/PRESID n. 25/2021 de 25/05/2021;

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2417

XIII – Os eventos adversos graves devem ser comunicados à Anvisa em até 24 horas por meio do sistema VigiMed ou e-SUS Notifica. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

XIV – O requerente deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados de segurança e efetividade de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

XV – O requerente deverá acompanhar diariamente alertas internacionais de segurança da vacina Sputnik V emitidos pelos países que estão utilizando a vacina e comunicar imediatamente à Anvisa em caso de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

XVI – O requerente deverá compartilhar o mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas da Anvisa ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados;

XVII – A vacina deverá ser distribuída apenas a centros de vacinação vinculados aos Centros de Referência de Imunobiológicos Especiais (CRIEs);

XVIII – As seguintes contraindicações deverão ser consideradas na imunização: hipersensibilidade a qualquer dos componentes da fórmula, gravidez, uso por lactantes, menores de 18 anos, mulheres em idade fértil que desejam engravidar nos próximos meses, ter recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, antecedentes de qualquer vacinação nas 4 semanas anteriores à potencial data de vacinação, ter recebido imunoglobulinas ou hemoderivados há 3 meses antes da potencial vacinação, tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas) e antecedentes de anafilaxia (segunda dose da vacina);

XIX – O requerente deverá requerer dos fabricantes Generium e UfaVita a avaliação do processo fabril e a proposição de alguma medida adicional de mitigação do risco decorrente da ausência da validação da etapa de filtração esterilizante. Esses documentos deverão ser apresentados à Anvisa previamente ao Licenciamento de Importação (LI) e deverão ser analisados e concluídos como adequados pela área técnica previamente ao deferimento do LI;

XX – O requerente deverá apresentar o relatório final de validação do processo de fabricação do Insumo Farmacêutico Ativo Biológico ou declaração da Autoridade Russa de que verificou e aprovou tal documento;

XXI – O requerente deverá apresentar, para adequação das Práticas Asséptica s e Teste de Esterilidade da UfaVita, os registros dos treinamentos dos operadores bem com vídeos demonstrando a execução das atividades críticas nas áreas limpas, indicando que os procedimentos de trabalho foram efetivamente corrigidos e não representam risco de contaminação ao produto. Tais documentos podem ser apresentados diretamente à Anvisa para análise e aprovação previamente ao deferimento do LI ou por meio de declaração da Autoridade Russa de que os verificou e aprovou;

XXII – O requerente deverá apresentar os relatórios de validação de métodos analíticos para os testes de RCA, PCR para identidade dos adenovírus e Elisa para imunogenicidade em camundongos. Tais relatórios podem ser apresentados conjuntamente com a documentação a ser enviada ao INCQS.

Os condicionantes e responsabilidades aqui destacados deverão constar em Termo de Compromisso a ser celebrado entre a Agência Nacional de Vigilância Sanitária – ANVISA, representada pelo Diretor Presidente e pelos Diretores titulares das diretorias que supervisionam as áreas de registro de medicamentos, fiscalização e monitoramento, e respectivos Governadores e Secretários de Saúde, como requisito para o deferimento do Licenciamento de Importação (LI) da vacina.

6.4 – Voto: vacina Sputnik V

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2418

Antes de pronunciar meu voto, reforço que todas as responsabilidades e condicionantes vinculados a esta importação visam garantir, com o mínimo de segurança, o bem maior que aqui tutelamos, a saúde. Daí porque entendo ser IMPRESCINDÍVEL o cumprimento integral pelos requerentes de todos os aspectos aqui destacados.

O que entendo ser razoável e que não haveria quaisquer óbices à sua realização, tendo em vista que estou certo que, assim como nós, os Governadores e Secretários de Saúde estão, igualmente, preocupados com a proteção do cidadão.

Assim, convencido de que estamos dando cumprimento integral à Lei 9.782/99, ao estabelecer a adoção de responsabilidades e condicionantes para autorização da importação excepcional, para fins de distribuição e uso da vacina em condições controladas, ou seja, estamos promovendo a proteção da saúde da população, por intermédio do controle sanitário, além de estarmos cumprindo as disposições da Lei nº 14.124/21 e da RDC nº 476/21, **VOTO** pela aprovação dos pedidos sob exame de autorização para importação excepcional, para fins de distribuição e uso da vacina Sputnik V em condições controladas.

Não obstante, destaco que, para a presente importação, autorizada por força da Lei nº 14.124/21, os aspectos de qualidade, segurança e eficácia da vacina Sputnik V foram atestados por meio do registro concedido pela Autoridade Sanitária da Rússia. Portanto, não foram considerados os aspectos regulatórios ordinários aplicáveis pelas áreas técnicas desta Agência que asseguram a comprovação de qualidade, segurança e eficácia de vacinas para autorização de registro ou uso emergencial no Brasil.

Os requerentes deverão observar os aspectos técnicos contidos neste Voto, assim como as obrigações e os condicionantes destacados. Salienta-se que o descumprimento das disposições contidas na RDC nº 476/21 constitui infração sanitária, nos termos da Lei nº 6.437/77, sem prejuízo das responsabilidades civil, administrativa e penal cabíveis.

As áreas de fiscalização e monitoramento da Anvisa deverão monitorar o perfil de queixas técnicas e eventos adversos associados à vacina importada nos termos deste Voto e adotar as ações de controle, monitoramento e fiscalização sanitária pertinentes.

Destaca-se que, caso o pedido de uso emergencial em análise pela Anvisa ou pela OMS seja negado ou com base em informações provenientes do controle e do monitoramento do uso da vacina Sputnik V no Brasil, ou outras informações técnicas ou científicas que venham a ser de conhecimento desta Anvisa, a Agência poderá suspender a importação, distribuição e uso da vacina importada nos termos da RDC nº 476/21, além de outras medidas que entender cabíveis conforme legislação vigente.

Por fim, destaco que fica autorizada a importação excepcional e temporária dos seguintes quantitativos, correspondentes a doses para vacinação de 1% da população de cada estado, dentro dos cronogramas enviados para o mês de junho/2021: Bahia – 300.000 doses; Maranhão – 141.000 doses; Sergipe – 46.000 doses; Ceará – 183.000 doses; Pernambuco – 192.000 doses; Piauí – 66.000 doses. Justifica-se o referido percentual por se tratar de quantitativo reduzido de doses vacinais, o que, além de permitir o adequado monitoramento e ação imediata caso necessário, não inviabiliza o custo do processo de importação. Ademais, os dados obtidos a partir do uso desses quantitativos servirão de base para decisões vindouras da Agência frente a novas doses a serem importadas.

Após o uso do referido quantitativo, a Anvisa avaliará os dados de monitoramento do uso da vacina, a fim de subsidiar nova deliberação da Agência quanto aos próximos quantitativos a serem importados. Mantido o status probatório para análise de tais pedidos de importação da vacina Sputnik V, a Diretoria Colegiada da Anvisa deliberará sobre os próximos pedidos por meio de Circuito Deliberativo.

6.5 – Condicionantes para importação da vacina Covaxin:

I – Todos os lotes a serem destinados ao Brasil devem ter sido fabricados após as adequações de Boas Práticas de Fabricação (BPF) implementadas pelo fabricante Bharat Biotech, conforme relatório CAPA apresentado à Anvisa;

II – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos certificados de análise atestando a realização de teste de potência;

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2419

III – Todos os lotes a serem destinados ao Brasil devem vir acompanhados dos laudos de esterilidade microbiológica;

IV – A vacina deverá ser utilizada apenas na imunização de indivíduos adultos ≥ 18 anos e < 60 anos;

V – A vacina não deverá ser utilizada em gestantes, puérperas, lactantes e indivíduos com comorbidades;

VI – Os lotes das vacinas importados somente poderão ser destinados ao uso após análise laboratorial e liberação pelo INCQS;

VII – O requerente deverá registrar a execução de todas as obrigações previstas na RDC nº 476/2021 e reforçadas neste Voto. Tais registros deverão ser apresentados à Anvisa sempre que solicitado;

VIII – O requerente deverá adotar ações de mitigação de risco considerando as diferenças de informações e formatos entre as embalagens, rótulos e bulas originais em comparação com as diretrizes regulatórias nacionais;

X – O requerente deverá disponibilizar às unidades de saúde as informações de rótulos e bulas, que sejam importantes para o uso correto do produto, no idioma português. Destaca-se que todas as indicações, contraindicações e restrições de uso constantes neste Voto deverão estar refletidas no documento a ser disponibilizado;

XI – Todos os lotes da vacina a serem fornecidos devem atender às condições aprovadas pela autoridade sanitária internacional;

XII – Os eventos adversos graves devem ser comunicados à Anvisa em até 24 horas por meio do sistema VigiMed ou e-SUS Notifica. Os demais eventos adversos e as queixas técnicas devem ser notificados em até 5 (cinco) dias de seu conhecimento. As queixas técnicas devem ser notificadas pelo sistema Notivisa;

XIII – O requerente deverá encaminhar à Anvisa, mensalmente, relatório de avaliação benefício-risco da vacina, contendo resultados provenientes do monitoramento ativo do uso da vacina, com conclusão sobre segurança e efetividade de cada lote importado, detalhado, segundo as boas práticas de farmacovigilância;

XIV – O requerente deverá acompanhar diariamente alertas internacionais de segurança da vacina Covaxin emitidos pelos países que estão utilizando a vacina e comunicar imediatamente à Anvisa em caso de alertas de segurança emitidos por outras autorizadas sanitárias internacionais;

XV – O requerente deverá compartilhar o mapa de distribuição dos lotes e respectivos resultados de controle de qualidade com as áreas da Anvisa ligadas ao pós mercado, a fim de agilizar as medidas de suspensão do uso frente a eventuais riscos identificados;

XVI – O requerente deverá apresentar periodicamente à Anvisa os dados de estabilidade da vacina na medida em que forem sendo obtidos;

XVII – O requerente deverá apresentar à Anvisa o relatório completo do estudo de fase 3 assim que disponível;

XIII – O requerente deverá monitorar ativamente os eventos adversos de interesse especial, principalmente aqueles com potencial de serem induzidos pelo uso do novo adjuvante, como reações autoimunes;

XIX – A vacina só poderá ser utilizada no Brasil após entrega e avaliação pela Anvisa dos dados referentes a dois meses de acompanhamento de segurança do estudo clínico de fase 3;

XX – A vacina deverá ser distribuída apenas a centros de vacinação vinculados aos Centros de Referência de Imunobiológicos Especiais (CRIEs);

XXI – As seguintes contraindicações deverão ser consideradas na imunização: hipersensibilidade a qualquer dos componentes da fórmula, gravidez, uso por lactantes, menores de 18

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2420

anos, mulheres em idade fértil que desejam engravidar nos próximos meses, ter recebido outra vacina contra Covid-19, febre, HIV, hepatite B ou C, antecedentes de qualquer vacinação nas 4 semanas anteriores à potencial data de vacinação, ter recebido imunoglobulinas ou hemoderivados há 3 meses antes da potencial vacinação, tratamentos com imunossupressores, citotóxicos, quimioterapia ou radiação há 36 meses antes da potencial vacinação, terapias com biológicos incluindo anticorpos anticitocinas e outros anticorpos, enfermidades graves ou não controladas (cardiovascular, respiratória, gastrointestinal, neurológica, insuficiência hepática, insuficiência renal, patologias endócrinas), antecedentes de anafilaxia (segunda dose da vacina).

Os condicionantes e responsabilidades aqui destacados deverão constar em Termo de Compromisso a ser celebrado entre a Agência Nacional de Vigilância Sanitária – ANVISA, representada pelo Diretor Presidente e pelos Diretores titulares das diretorias que supervisionam as áreas de registro de medicamentos, fiscalização e monitoramento, e o Ministro da Saúde, como requisito para o deferimento do Licenciamento de Importação (LI) da vacina.

6.6 – Voto: vacina Covaxin

Antes de pronunciar meu voto, reforço que todas as responsabilidades e condicionantes vinculados a esta importação visam garantir, com o mínimo de segurança, o bem maior que aqui tutelamos, a saúde. Daí porque entendo ser IMPRESCINDÍVEL o cumprimento integral pelo importador de todos os aspectos aqui destacados.

O que entendo ser razoável e que não haveria quaisquer óbices à sua realização, tendo em vista que estou certo que, assim como nós, o Ministério da Saúde está, igualmente, preocupado com a proteção do cidadão.

Convencido de que estamos dando cumprimento integral à Lei 9.782/99, ao estabelecer a adoção de condicionantes para autorização da importação excepcional, para fins de distribuição e uso da vacina em condições controladas, ou seja, estamos promovendo a proteção da saúde da população, por intermédio do controle sanitário, além da superação dos aspectos que levaram ao indeferimento do pedido anterior de importação excepcional da vacina Covaxin pelo Ministério da Saúde, especialmente no que se refere à anuência para condução de estudo clínico no Brasil e à adequação dos aspectos das Boas Práticas de Fabricação, **VOTO** pela aprovação do pedido sob exame de autorização para importação excepcional, para fins de distribuição e uso da vacina Covaxin em condições controladas.

Não obstante, destaco que, para a presente importação, autorizada por força da Lei nº 14.124/2021, os aspectos de qualidade, segurança e eficácia da vacina Covaxin foram atestados por meio da autorização de uso emergencial concedida pela Autoridade Sanitária da Índia. Portanto, não foram considerados os aspectos regulatórios ordinários aplicáveis pelas áreas técnicas desta Agência que asseguram a comprovação de qualidade, segurança e eficácia de vacinas para autorização de registro ou uso emergencial no Brasil.

O deferimento da Licença de Importação (LI) ficará condicionado à avaliação pela Anvisa da validação do ensaio de quantificação de antígeno (proteína S) para o IFA e determinação da potência (imunogenicidade em camundongos) para a vacina (produto terminado).

O importador deverá observar os aspectos técnicos contidos neste Voto, assim como as obrigações e os condicionantes destacados. Salienta-se que o descumprimento das disposições contidas na RDC nº 476/21 constitui infração sanitária, nos termos da Lei n. 6.437, de 20 de agosto de 1977, sem prejuízo das responsabilidades civil, administrativa e penal cabíveis.

As áreas de fiscalização e monitoramento da Anvisa deverão monitorar o perfil de queixas técnicas e eventos adversos associados à vacina importada nos termos deste Voto e adotar as ações de controle, monitoramento e fiscalização sanitária pertinentes.

Destaca-se que, caso ocorra negativa quanto a eventual pedido de uso emergencial da vacina pela Anvisa ou pela OMS, ou com base em informações provenientes do controle e do monitoramento do uso da vacina Covaxin no Brasil, ou outras informações técnicas ou científicas que venham a ser de conhecimento desta Anvisa, a Agência poderá suspender a importação, distribuição e

Mensagem Parte 12 (0021610092) SEI 25000.100536/2021-987 pg. 2421

uso da vacina importada nos termos da RDC nº 476/21, além de outras medidas que entender cabíveis conforme legislação vigente.

Por fim, destaco que fica autorizada a importação excepcional e temporária do seguinte quantitativo, correspondente a doses para imunização de 1% da população nacional, dentro do cronograma enviado pelo Ministério da Saúde: 4.000.000 doses. Nesse sentido, o Ministério deverá avaliar a necessidade de reserva do quantitativo necessário para aplicação da 2ª dose da vacina. Justifica-se o referido percentual por se tratar de quantitativo reduzido de doses vacinais, o que, além de permitir o adequado monitoramento e ação imediata caso necessário, não inviabiliza o custo do processo de importação. Ademais, os dados obtidos a partir do uso desse quantitativo servirão de base para decisões vindouras da Agência frente a novas doses a serem importadas.

Após o uso do referido quantitativo, a Anvisa avaliará os dados de monitoramento do uso da vacina, a fim de subsidiar nova deliberação da Agência quanto aos próximos quantitativos a serem importados. Mantido o status probatório para análise de tais pedidos de importação da vacina Covaxin, a Diretoria Colegiada da Anvisa deliberará sobre os próximos pedidos por meio de Circuito Deliberativo.

Assunto: **Solicitação de autorização para importação em caráter excepcional de doses da Vacina Covaxin.**

Referência: Caso responda este Ofício, indicar expressamente o Processo nº 25351.915151/2021-48.

Senhor Secretário,

1. Cumprimentando-o cordialmente, em atenção ao Ofício nº 129/2021/DLOG/SE/MS, por meio do qual o Ministério da Saúde solicitou a importação em caráter excepcional de 20.000.000 (vinte milhões) de doses da vacina Covaxin / BBV152, com fulcro no disposto na Lei nº 14.124, de 10 de março de 2021, para uso na imunização contra a Covid-19, informo que a Diretoria Colegiada da Agência Nacional de Vigilância Sanitária decidiu, por maioria, vencida a Diretora Cristiane Jourdan, AUTORIZAR os pedidos, sob exame, de importação e distribuição, excepcional e temporária, das vacinas Covaxin e Sputnik V, com exigência de atendimento das obrigações e condicionantes dispostas nos termos do voto do relator – Voto nº 163/2021/SEI/DIRE5/Anvisa (SEI 1477657).

Anexos: I - Voto nº 163/2021/SEI/DIRE5/Anvisa
