Fortaleza/CE, 09 de julho de 2021.

Excelentíssimo Senhor
Senador OMAR AZIZ
Presidente da CPI DA PANDEMIA – Senado Federal

Assunto: Requerimento 00953/2021 CPIPANDEMIA

Excelentíssimo Senhor Presidente,

HAPVIDA ASSISTÊNCIA MÉDICA LTDA., pessoa jurídica de direito privado, inscrita no CNPJ sob o nº. 63.554.067/0001-98, com endereço na Av. Heráclito Graça, nº. 406, 2º. Andar, Centro, Fortaleza/CE, CEP: 60.140-060, empresa operacional e subsidiária da HAPVIDA PARTICIPAÇÕES E INVESTIMENTOS S.A., por meio do Head da Rede Própria do Grupo, Dr. Anderson Luis de Alvarenga Nascimento, vem, respeitosa e tempestivamente[1], à presença de Vossa Excelência, prestar as informações solicitadas por essa Comissão Parlamentar de Inquérito.

A proposição em questão, de autoria do Senador Humberto Costa, requer informações acerca de abordagens terapêuticas adotadas pelo Hapvida para tratamento da Covid-19 em usuários do plano de saúde.

Cabe, inicialmente, consignar nossas sinceras condolências a todas as vítimas e suas famílias pelas inestimáveis perdas, bem como nossa sincera homenagem aos profissionais de saúde pela dedicação e esforço no enfrentamento da doença.

O ora signatário arregimentou todas as informações junto às áreas internas do Grupo Hapvida com gestão sobre cada tema indagado, como as áreas médicas, financeira, de logística, entre outras, a fim de que todas as respostas fossem atendidas com as informações adequadas.

Dito isso, é importante registrar que o Grupo Hapvida, ainda antes do início da pandemia no Brasil, já tinha iniciado seu plano de contingência com o foco na saúde e proteção de seus milhões de usuários. O Hapvida também nunca descurou da proteção e segurança dos seus milhares de colaboradores que, desde então, têm trabalhado incansavelmente no *front* de combate à Covid-19.

Ainda em 22/1/2020, foi realizado o primeiro comunicado interno sobre a possível epidemia na China pelo Covid-19. Em 28/1/2020, um mês antes do registro do primeiro caso da Covid-19 no Brasil, foi realizado o primeiro webinar sobre viroses e início das reuniões diárias do Grupo Técnico de Especialidades do Hapvida para abordagem da possível epidemia por aquela nova doença, bem como foi criada uma Comissão de Crise com reuniões praticamente diárias.

---

1 Requerimento foi recebido em 02/07/2021 (sexta-feira). O prazo de 5 (cinco) dias para resposta se encerra em 09/07/2021 (sexta-feira).

A Comissão de Crise é integrada pelos gestores da rede própria do Grupo e de outras áreas, como obras, *supply*, farmácia e inteligência médica. Já o Grupo Técnico de Especialidades é integrado pelos maiores *experts* do Grupo na área de medicina, enfermagem e fisioterapia. Para se ter uma ideia do nível de organização, empenho e planejamento do Grupo foram feitas até o mês de maio de 2021, 452 reuniões do Grupo Técnico de Especialidades e 252 reuniões da Comissão de Crise.

O Hapvida estabeleceu como prioridade e concentrou todos os seus esforços e recursos no enfrentamento da Covid-19 e manutenção dos níveis de excelência do atendimento aos seus usuários. Focou, sobretudo, na constante ampliação de leitos de Unidade de Terapia Intensiva e de Enfermaria, tendo viabilizado o incremento de mais de 1.000 novos leitos de UTI em todas as regiões do país; na aquisição planejada e segura de EPIs, medicamentos, respiradores, dentre outros insumos, inclusive com aquisição direta no exterior; no robustecimento e qualificação de sua equipe multidisciplinar de profissionais; na criação e ampliação de diversas modalidades de atendimento à distância, abrangendo consultas por Telemedicina, telefone e chat; dentre outras tantas medidas. Tais providências perpassaram a segunda onda da pandemia e continuam sendo realizadas, de maneira diária e dinâmica, em consonância com a evolução da crise e a disposição de recursos estruturais e de pessoal.

Por ser útil, destacam-se algumas medidas:

- Ampliação das unidades de atendimento, com o fortalecimento da capacidade de atendimento de sua rede própria, considerando os períodos críticos em cada localidade, inclusive com unidades de saúde direcionadas exclusivamente ao atendimento da Covid-19.

- Ampliação considerável na quantidade de leitos hospitalares, com o incremento de mais de 1.000 leitos de UTI exclusivos para Covid-19 e acompanhamento diário pela Comissão de Crise da demanda por leitos e a suficiência de sua estrutura de atendimento.

- Mobilização e aquisição de equipamentos e insumos, com planejamento diário de prospecção e aquisição, inclusive no exterior, além do fretamento de voos para o pronto abastecimento de sua rede própria em todo o país. Destaca-se o compromisso, desde os momentos iniciais da pandemia, com a garantia de equipamentos de proteção individual aos profissionais em serviço. O mesmo compromisso logístico se verifica quanto aos pacientes, com o êxito no abastecimento de equipamentos e insumos para sua rede, de analgésicos, sedativos e bloqueadores para intubação, até respiradores, monitores e mesmo camas hospitalares.

- Reforço da equipe de profissionais de saúde, com a contratação adicional de mais de 6 mil profissionais, dentre técnicos de enfermagem, enfermeiros, médicos e fisioterapeutas, quantidade ainda acrescida de profissionais deslocados de outras regionais da operadora.

- Investimento em tecnologia para a criação de uma nova plataforma digital de telemedicina, permitindo a ampliação de atendimento por esta

modalidade em ambiente próprio e seguro, evitando que pessoas com sintomas da doença precisassem sair de casa e, com isso, desafogando as emergências. Registra-se que foram realizadas até 80 mil consultas por mês nesta modalidade;

• A potencialização de leitos para pacientes mais graves também se deu pela ampliação das medidas de desospitalização de pacientes, mediante oferta criteriosa e segura de suporte estrutural e equipe multidisciplinar para tratamento em ambiente domiciliar, nos casos em que fosse possível conciliar o desejo e o conforto da família, com a efetividade do tratamento.

Registre-se, ainda, que o sistema Havida sempre teve por filosofia e premissa operacional, a fim de garantir segurança assistencial aos seus beneficiários, manter sobra de leitos em suas áreas de atuação.

Alguns exemplos disso foram os casos de Manaus, em que tínhamos apto a ser inaugurado o Hospital Rio Solimões, de Belém, com a nova torre do Hospital Rio mar, de Recife, com o Hospital Unicordis (hoje, Agamenon Magalhães), além de outros casos em outras praças.

Essa abordagem operacional permitiu que, ao longo da pandemia, fossem incrementados, com a agilidade que a situação exigia, mais de 1.000 leitos de UTI. Dessa forma, não experimentamos situação em que a taxa de ocupação fosse além da capacidade instalada e ampliada. Isto, sem considerar as novas aquisições de empresas pelo grupo, que fez com que passássemos de 1824 leitos, em fevereiro de 2019, para 3973 leitos em todo o grupo, ampliando a possibilidade de flexibilidade operacional no manejo de leitos.

Além disso, o fato de sermos uma empresa verticalizada com hospitais em todas as regiões do País, bem como da primeira onda da pandemia ter se comportando como tal, foi possível um remanejamento contínuo de estrutura (equipes médicas e multidisciplinares, insumos, equipamentos de proteção, respiradores etc.) de locais ainda não atingidos fortemente para aqueles em que enfrentavam a agudização da pandemia. Nesse operacional de guerra, foram realizados mais de 70 (setenta) voos fretados, que se somaram a um total de gastos na ordem de 145 (cento e quarenta e cinco) milhões de reais, em 2020, e de 197 (cento e noventa e sete) milhões de reais, em 2021 (até maio).

Ainda como diferencial do modelo verticalizado de operação para a manutenção de suficiência de leitos ao longo da pandemia, foi possível, igualmente com muita agilidade, converter leitos de enfermaria em leitos de UTI ou leitos pediátricos em leitos adultos (e vice-versa), sempre de acordo com a demanda específica de cada região atingida.

Tanto esforço conjunto, planejamento e emprego de recursos financeiros e humanos nos permitiu uma feliz e gratificante constatação: mesmo nos momentos mais críticos da 1ª e 2ª ondas, não faltou qualquer tipo de leito especializado ou profissionais qualificados para atendimento de nossos usuários, bem como mantivemos estoque de medicamentos, materiais de EPI e equipamentos, absolutamente suficientes a atender em todos os momentos a demanda de nossos usuários e colaboradores.

Destaca-se também que, todo o trabalho desenvolvido se pautou na relação de absoluto respeito e atenção com todos os colaboradores, cujas homenagens rendemos aqui, uma vez que foram e estão sendo absolutamente imprescindíveis na travessia de momento tão difícil que tem enfrentado o Brasil e o Mundo.

Sobre os tratamentos prescritos pelos profissionais médicos, dentro de sua independência técnica e, obviamente, das normas éticas profissionais preconizadas pelos reguladores da profissão, a postura do Hapvida sempre foi de respeito à liberdade e autonomia técnica dos médicos para determinarem a conduta terapêutica mais adequada para cada paciente, em conformidade com o histórico individual e condição clínica.

Por certo, os próprios médicos, sobretudo diante de uma enfermidade nova, pandêmica, sem precedentes de atendimentos eficazes, atuando em uma verdadeira guerra, estão naturalmente sujeitos a uma curva de aprendizagem, o que pode trazer mudança nas suas posturas assistenciais, inclusive atualizando-se com as novas pesquisas e estudos cotidianamente divulgados no mundo. O que o Hapvida tem por princípio é que os médicos que atendem aos seus beneficiários atuem dentro do que os reguladores admitem, de modo que não desbordem desse limite ético - profissional.

Ademais, o Hapvida, firme na convicção de que apenas os profissionais de saúde têm a capacidade técnica de prescrever o tratamento adequado, tem se esforçado para reforçar junto aos seus usuários a orientação de que busquem atendimento médico especializado tão logo sintam quaisquer sintomas sugestivos de Covid-19, evitando a automedicação. Inclusive, um dos motivadores da expansão da telemedicina no Grupo Hapvida (com até 80 mil consultas/mês) durante a pandemia, além, claro, de garantir a segurança dos usuários, foi o de que, o receio dos usuários de se contaminarem ao se dirigirem a uma unidade de atendimento, os inclinasse a se automedicarem. Assim, o incremento da telemedicina foi mais uma importante medida na facilitação do acesso e segurança na orientação à saúde.

Sobre os protocolos ou abordagens terapêuticas adotados para o tratamento de pacientes com covid-19, esclarece-se que, diante da inexistência de tratamentos uniformes e únicos, tendo em vista tratar-se de doença nova, pandêmica e grave com muitos estudos ainda em andamento, adotaram-se algumas recomendações dentro das várias vertentes existentes, com foco na autonomia do médico e da valorização da relação médico-paciente para oferecimento do melhor tratamento médico disponível.

No tocante a abordagem medicamentosa a nível ambulatorial, nossos médicos utilizaram várias alternativas medicamentosas, dentre elas as citadas na justificação do ofício, não tendo, no entanto, um único protocolo medicamentoso seguido de forma majoritária. As principais abordagens terapêuticas aplicadas pelos médicos da rede envolviam, isoladamente ou em combinações diversas, conforme a avaliação de cada profissional, os seguintes medicamentos: Dipirona, Formoterol/Budesonida, Vitamina D, Óxido de Zinco, Azitromicina, Prednisona, Hidroxicloroquina, Ivermectina e Eliquis.

Válido destacar que mesmo no início da pandemia, momento em que havia um forte entendimento no sentido da eficácia das drogas mencionadas na

justificação do ofício (cloroquina, hidroxicloroquina e ivermectina), as prescrições médicas nunca chegaram a representar, no âmbito da rede hospitalar do grupo, a maioria das abordagens terapêuticas dos médicos, sendo atualmente sua representatividade praticamente irrelevante.

Registre-se ainda que, não existiam, sobretudo no início da pandemia, estudos comprovando a ausência de benefícios de tais medicamentos, cujos efeitos colaterais eram conhecidos dos profissionais médicos. Considere-se também que, o Conselho Federal de Medicina apontou no sentido de que, mediante decisão compartilhada com o paciente, de maneira esclarecida e livre poderia ser considerada a utilização pelos médicos de tais substâncias. Diante deste cenário e considerando o notório desabastecimento no mercado destes fármacos, a empresa utilizou a sua capacidade e expertise logística para adquiri-los e tê-los em estoque para o caso de serem prescritos por parte dos médicos que atenderiam seus usuários.

Agiu, assim, na cadeia logística e na prontidão hospitalar, com a energia e meios disponíveis para que a decisão médica autônoma, fosse viabilizada, seja ela a utilização de leito hospitalar, seja a realização de exames complementares para dar suporte ao tratamento, seja o desembaraço de insumos e medicação que pudessem estar à disposição dos profissionais de saúde para a melhor abordagem terapêutica dos usuários de nossos serviços.

A aquisição e dispensação dos medicamentos se deu no mesmo contexto de guerra e de preocupação com o atendimento aos beneficiários, os quais poderiam ter o tratamento prescrito por seu médico assistente frustrado pelo desabastecimento de alguns medicamentos no mercado no meio da pandemia. Dessa forma, sempre preservando a autonomia médica e, assim, sem intervenções que pudessem caracterizar infração ética, buscou-se uma atuação proativa preocupada com a viabilização da assistência efetiva aos beneficiários, fim último do grupo Hapvida.

Todos os esforços empreendidos permitiram que resguardássemos milhares de vidas. Conforme se verá nos dados e gráficos trazidos em resposta ao questionamento 9, o Grupo Hapvida apresentou índices assistenciais muito favoráveis se comparados aos índices nacionais e ainda mais favoráveis se comparados às praças (cidades) de atuação da empresa.

Feito este preâmbulo, passa-se a responder mais objetivamente aos quesitos formulados no requerimento.

1. Quais os protocolos adotados para tratamento de pacientes com covid-19? Solicitam-se cópias de todos os protocolos utilizados para covid-19 bem como explicações acerca de eventuais mudanças nos protocolos ao longo do tempo.

Sobre as abordagens terapêuticas (protocolos) utilizados, inicialmente é importante destacar os desafios de enfrentar uma doença nova, originalmente sem quaisquer padrões de conduta médica consolidada no Brasil e no mundo, demandando esforços e investimentos de grande monta para aceleração do aprendizado sobre o comportamento da doença e as melhores abordagens. Trata-se do maior desafio enfrentado pelo setor de saúde em muitas décadas e sem dúvida, o maior da história do Hapvida.

Foi nesse contexto de absoluta incerteza e de enormes riscos que as decisões foram sendo tomadas. A gestão de excelência permitiu a necessária higidez financeira e de caixa para que os investimentos pudessem ser garantidos. As reuniões diárias, iniciadas desde antes do primeiro caso em solo brasileiro, trouxeram à apreciação das equipes técnicas e de gestão o cenário mundial, havendo a opção de investir para disponibilizar o que de melhor e mais promissor houvesse para enfrentar o nobre e desafiador encargo.

O empenho e prioridade no enfrentamento da crise fez com que, ainda em 22/1/2020, fosse editado o primeiro comunicado interno sobre a possível epidemia pela Covid-19, ainda restrita à China. Um mês antes do registro do primeiro caso no Brasil, em 28/1/2020, foi realizado o primeiro seminário online sobre o tema, iniciadas as reuniões diárias do Grupo Técnico de Especialidades e instalada a Comissão de Crise para acompanhamento diuturno da evolução da doença. O Grupo Técnico de especialidades foi integrado pelos maiores experts do Hapvida em medicina, enfermagem e fisioterapia. A Comissão de Crise, pelos gestores da rede própria do grupo e dos segmentos de inteligência médica, farmácia, logística e obras.

Dado o contexto, não era possível deixar de considerar todas as opções disponíveis e atuar dentro da regulamentação existente, respeitando a liberdade dos médicos assistentes, valorizando a relação médico-paciente existente na linha de frente e fornecendo meios para o melhor atendimento possível.

Em tal cenário, verificou-se a existência de alguns estudos internacionais[2] indicando benefícios pela utilização de tratamentos que pudessem reduzir o agravamento da doença, a internação e a quantidade de óbitos. Esses estudos passaram a repercutir em todo o país, entre especialistas, governos e empresas.

Neste ponto é importante ressaltar que os relatos da literatura médica eram escassos e os artigos disponíveis sobre epidemias passadas davam conta de que além de medidas de controle de contágio, como o distanciamento social e isolamento de contactantes, uma abordagem na fase inicial de uma doença viral poderia fazer sentido, como sugeriam estudos relacionados a agentes já reconhecidos como patógenos humanos (229E, OC43, NL63, HKU1, Vírus da Síndrome Respiratória Aguda Grave-SARSCoV e vírus da Síndrome Respiratória do Oriente Médio-MERS-CoV), resultando em uma mais rápida redução da carga viral e dos marcadores inflamatórios e impactando na redução da duração de sintomas, dias de internação e até mortalidade.

III- Gautret P, Lagier J-C, Parola P, et al. Hydroxychloroquine and azithromycin as a treatment of COVID-19: results of na open-label non-randomized clinical trial [published online ahead of print March 20, 2020]. Int J Antimicrob Agents. (doi: 10.1016/j.ijantimicag.2020.105949)

As evidências da utilização de medicamentos adaptados para esta nova doença eram favoráveis pela experiência clínica, ou seja, medicamentos como cloroquina, hidroxicloroquina, usados para tratar a malária e algumas doenças autoimunes, por inibirem potentemente a infecção viral do coronavírus SARS (SARS-CoV-1) e SARS-CoV-2 em estudos de cultura de células, ou a ivermectina e nitazoxamida poderiam ajudar na fase inicial da doença. As medidas de tratamento farmacológico da COVID-19, como "o tratamento inicial" ou outras formas de abordagem desta doença, também estavam amparadas pelo Parecer CFM nº 004/2020, de 16 de abril de 2020.

Naquela oportunidade, igualmente é importante ressaltar, publicações em diversos veículos de mídia e nos sítios dos órgãos e entidades no Brasil e no exterior que davam conta de que a utilização desses fármacos passou a ser considerada por equipes médicas como promissora alternativa terapêutica em diversas situações, conforme se menciona exemplificativamente:

1. **Índia, março de 2020:** a "Força Nacional de combate à COVID-19" na Índia, constituída pelo **Conselho de Pesquisa Médica da Índia** (*Indian Council for Medical Research*) recomendou medicação profilática com hidroxicloroquina em população de alto risco (profissionais de saúde assintomáticos envolvidos no tratamento de casos suspeitos ou confirmados de doença COVID-19 e contatos domésticos assintomáticos de casos confirmados em laboratórios)
https://www.mohfw.gov.in/pdf/AdvisoryontheuseofHydroxychloroquinasprophylaxisforSARSCoV2infection.pdf

2. **Ministério da Saúde, março de 2020**: a Nota Informativa nº 5/2020-DAF/SCTIE/MS, posteriormente atualizada pela Nota Informativa nº 6/2020 do mesmo Departamento de Assistência Farmacêutica e Insumos Estratégicos, informou que disponibilizaria, a critério médico, o fármaco cloroquina como terapia adjuvante no tratamento de formas graves da COVID- 19, em pacientes hospitalizados (BRASIL, 2020).

3. **Ministério da Saúde, maio de 2020**: a Nota Informativa nº 9/2020-SE/GAB/SE/MS trouxe orientações para manuseio medicamentoso precoce de pacientes com diagnóstico da COVID-19, incluídas a cloroquina, hidroxicloroquina e azitromicina para o tratamento conforme a classificação dos sinais e sintomas (BRASIL, 2020c).

4. Estado do Ceará: A Secretaria da Saúde do Ceará (SESA) explica o uso de cloroquina na rede estadual para pacientes acometidos de Covid-19.
Entenda o protocolo de uso da Cloroquina na Rede Pública Estadual - Governo do Estado do Ceará (ceara.gov.br)

5. Município de São Paulo: Secretaria Municipal de Saúde de São Paulo inclui a cloroquina como uma das formas de tratamento a ser utilizada na rede municipal em pacientes com Covid-19.
Bruno Covas anuncia uso da cloroquina no tratamento da covid-19 (ebc.com.br)

6. **Conselho Federal de Medicina, abril de 2020:** O CFM divulgou o Parecer nº 04/2020 no qual estabelece critérios e condições para a prescrição de cloroquina e de hidroxicloroquina em pacientes com diagnóstico confirmado de covid-19. Embora manifestando que não havia evidências sólidas de que essas drogas tinham efeito confirmado na prevenção e tratamento dessa doença, diante da excepcionalidade da situação e durante o período declarado da pandemia de COVID-19, entendeu ser possível a prescrição desses medicamentos.

20. **Associação Médica do Espírito Santo:** A Associação entrou na justiça para defender a liberdade dos médico na prescrição cloroquina e hidroxicloroquina a pacientes com sintomas de Covid-19.
Associação Médica pede que uso de cloroquina contra covid-19 seja banido | Congresso em Foco (uol.com.br)

21. **Associação Médica de Goiás, julho de 2020:** editou Nota Técnica com orientações e recomendações acerca da COVID19 mencionando a existência de dois modelos polarizados na abordagem medicamentosa do tratamento frente à Covid19: Modelo pré-hospitalar que trabalha com profilaxia (com protocolos que orientam uso de ivermectina, vitamina D3, sulfato de zinco e hidroxicloroquina) e terapia da doença

instalada (com acréscimo de azitromicina, anticoagulante e corticoterapia, conforme a fase); e Modelo hospitalar que não reconhece os benefícios da profilaxia medicamentosa, e nem a utilização referente às fases 1 e 2, tratando a fase 3 (avançada), com doente sob internação. Defende a autonomia médica e que o médico não deve omitir ao paciente a possibilidade dos 2 modelos aventados, e, assim, permitir que a autonomia da vontade dos pacientes seja respeitada na plenitude.
https://www.amg.org.br/amg_noticias/nota-tecnica-orientacoes-e-recomendacoes-frente-a-covid-19/

22. **Amapá, maio de 2020:** O Comitê de Enfrentamento à COVID-19 editou documento intitulado Enfrentamento da COVID-19 na Atenção Primária onde propõe abordagem para sintomas moderados (e, em alguns casos, mesmo sintomas leves) com difosfato de cloroquina ou hidroxicloroquina ou ivermectina ou nitazoxanida, associados a azitromicina e/ou amoxiciclina e clavulanato.

33. **Franca, São Paulo, agosto de 2020:** a Prefeitura, com base na Nota Técnica Médica nº 05/2020 da Secretaria Municipal de Saúde, fixou

recomendação, sem distribuição gratuita na rede municipal de saúde, de tratamento para COVID-19, mediante prescrição médica e termo de consentimento, considerando, dentre outros, a ivermectina, hidroxicloroquina, osetalmivir, azitromicina, vitamina D e zinco. https://www.franca.sp.gov.br/noticias/saude/orientacao-para-prevencao-e-tratamento-precoce-da-covid-19

34. **Jundiaí, São Paulo, agosto de 2020:** disponibilizou nas Unidades Básicas de Saúde, Unidades Sentinela e Clinica da Família a cloroquina e a hidroxicloroquina, a critério do médico assistente. https://jundiai.sp.gov.br/noticias/2020/08/05/jundiai-disponibiliza-medicamentos-para-cuidado-precoce-de-covid-19/

35. **São Bento do Sul, Santa Catarina, agosto de 2020**: a Secretaria Municipal de Saúde editou a Portaria nº 07/2020 que apresenta o protocolo de orientações para o manuseio medicamentoso precoce de pacientes sintomáticos com diagnóstico da Covid-19, fixando para pacientes com sintomas leves, mediante prescrição do médico e o aceite do paciente, o tratamento com kit de medicamentos composto por Cloroquina, Azitromicina e Sulfato de Zinco. https://www.saobentodosul.sc.gov.br/noticia/18176/uso-de-cloroquina-saude-investe-em-2-mil-kits-para-tratamento-precoce-de-pacientes-sintomaticos-da-covid-19

36. **Porto Seguro, Bahia, janeiro de 2021:** recomendações para tratamento farmacológico nos primeiros dias de sintomas, com diversos medicamentos, dentre os quais Ivermectina, Azitromicina, Sulfato de Hidroxicloroquina, Cloroquina, Zinco e Nitazoxanida. https://data.portal.sistemas.ro.gov.br › 2021/03

37. **Maracaju, Mato Grosso do Sul, abril de 2021:** aderiu ao protocolo de tratamento precoce conta a Covid-19 https://www.maracaju.ms.gov.br/portal/noticias/0/3/4120/municipio-de-maracaju-adere-protocolo-de-tratamento-precoce-conta-a-covid-19

Além dos exemplos citados, diversos entes privados, dentre eles Unimeds, Operadoras de Planos de Saúde e Instituições Hospitalares, admitiram abordagens terapêuticas similares, abrangendo as drogas mencionadas.

Naquele momento, considerado o estado da ciência e da técnica, observadas as limitações de informações decorrente do ineditismo, diante também da gravidade da doença que exigia ações imediatas no intuito de preservar vidas, foram facultadas aos médicos as diversas abordagens terapêuticas havidas, ademais sendo disseminadas as informações existentes para orientar as ações.

O ambiente interno era, e ainda é, de muitas incertezas e de trabalho colaborativo multidisciplinar, onde cabe ao médico assistente, na linha de frente, o diagnóstico e a decisão da abordagem terapêutica, em conjunto com o paciente, observada a regulamentação dos conselhos. Jamais houve a imposição de qualquer prescrição ao corpo técnico, bem como não houve a vedação de prescrições. Houve sim, a divulgação de estudos e informações, a apresentação de abordagens terapêuticas que pudessem ser considerados a partir dos casos concretos e a

disponibilização de leitos especializados, medicamentos, materiais de EPI e equipamentos suficientes para atender a demanda em todos os momentos.

Nessa conjuntura de troca de informações, autonomia médica e valorização da relação médico-paciente, parte do corpo clínico adotou abordagem de utilização de fármacos como a ivermectina, cloroquina e hidroxicloroquina. Entretanto, é bom que se diga que a utilização de tais abordagens jamais chegou a ser maioria entre os médicos assistentes, nunca tendo chegado sequer a 50% (cinquenta por cento) e hoje não se aproxima de 5% (cinco por cento) dos pacientes atendidos, variação que bem reflete todo este ambiente de incertezas que até hoje se faz presente.

O Hapvida, portanto, agiu de maneira vigorosa na prontidão hospitalar, para garantir todos os meios de atendimento e segurança das equipes de saúde em atuação, mantendo como foco a autonomia do médico assistente, o respeito às normas éticas preconizadas pelos reguladores e a absoluta liberdade para a decisão compartilhada com o paciente, de maneira livre e esclarecida. Agiu também para compartilhar, de forma proativa e constante, todo o aprendizado que houvesse sobre o comportamento da doença, bem como para propagar entre os profissionais a plena autonomia para determinar a conduta terapêutica para cada paciente, em conformidade com o histórico individual e condição clínica.

A variação e a mudança nas posturas assistenciais ao longo da pandemia são decorrentes do próprio ineditismo da doença e da forma como o seu curso vai se apresentando ao longo do tempo, gerando uma curva de aprendizado entre os médicos

Quanto às abordagens terapêuticas especificamente adotadas pelos médicos-assistentes para o tratamento de pacientes com Covid-19, no âmbito da rede do grupo, importante salientar a inexistência de tratamentos uniformes aplicáveis a todos os pacientes. Adotaram-se algumas recomendações dentro das várias vertentes existentes, sempre prestigiando a relação médico-paciente e a autonomia médica para oferecimento do melhor tratamento médico disponível.

Para evidenciar essa variação de abordagens terapêuticas utilizadas, elencamos abaixo as que foram mais adotadas pelos médicos assistentes no âmbito da rede do grupo:

a) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores.
b) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Formoterol/Budesonida** 6mcg/200mcg, uso inalatório, até 4x ao dia.
c) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Formoterol/Budesonida** 6mcg/200mcg, uso inalatório, até 4x ao dia, **Vitamina D** 10000 ui 1x ao dia, **Óxido de zinco 30mg** 1x ao dia
d) Recomendação **de hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias.
e) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias.
f) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias.

g) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Hidroxicloroquina** 400mg, tomando 1 cp de 12/12horas apenas no primeiro dia, depois Meio comprimido (200mg) de 12/12horas.

h) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Hidroxicloroquina** 400mg, tomando 1 cp de 12/12horas apenas no primeiro dia, depois Meio comprimido (200mg) de 12/12horas, **Ivermectina** 6mg, na dose de 12 a 18mg dia, por 2 dias apenas.

i) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Hidroxicloroquina** 400mg, tomando 1 cp de 12/12horas apenas no primeiro dia, depois Meio comprimido (200mg) de 12/12horas, **Ivermectina** 6mg, na dose de 12 a 18mg dia, por 2 dias apenas.

j) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Ivermectina** 6mg, na dose de 12 a 18mg dia, por 2 dias apenas.

k) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Hidroxicloroquina** 400mg, tomando 1 cp de 12/12horas apenas no primeiro dia, depois Meio comprimido (200mg) de 12/12horas,

l) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Hidroxicloroquina** 400mg, tomando 1 cp de 12/12horas apenas no primeiro dia, depois Meio comprimido (200mg) de 12/12horas, **Ivermectina** 6mg, na dose de 12 a 18mg dia, por 2 dias apenas**, Eliquis** 2,5mg um cp 2x ao dia.

m) Recomendação de **hidratação oral livre**, **Dipirona** de 500mg a 1g, de 6 em 6 horas se febre ou dores, **Azitromicina** 500mg 1cp uma vez ao dia por 5 dias, **Prednisona** a partir do quinto dia de doença, de 20 a 40 mg ao dia, por 5 dias, **Ivermectina** 6mg, na dose de 12 a 18mg dia, por 2 dias apenas**, Eliquis** 2,5mg um cp 2x ao dia.

Conforme se vê, o foco sempre foi potencializar a circulação de informações que pudessem refletir as melhores práticas disponíveis, de maneira que fossem consideradas pelos médicos assistentes como alternativas terapêuticas, de acordo com sua avaliação junto ao paciente no caso concreto. Facilitar o trânsito ágil dessas informações, permitindo fluidez na troca de experiências com os profissionais atuando na sempre agitada e tensa linha de frente, era uma necessidade em face da urgência e ineditismo da pandemia.

Tais abordagens terapêuticas jamais foram impositivas, o que se pode extrair das inúmeras variações adotadas pelos médicos da rede, e sim facilitadores do acesso às discussões em voga na comunidade médica em geral e, mais especificamente, no grupo de experts da rede quanto às possíveis abordagens para o manejo dos casos, a serem considerados a partir da experiência médica individual e dos sinais e sintomas observados em cada caso. Todas as informações repassadas tinham como desiderato permitir um adequado ambiente aos médicos assistentes, em um modelo de atendimento flexível e centrado na autonomia dos profissionais, a fim de que a melhor assistência fosse prestada aos pacientes conforme suas condições específicas.

Importante destacar que não há registros de internações resultantes de qualquer efeito colateral pelo uso de medicamentos no tratamento na fase inicial da doença. A empresa acompanha atentamente a jornada de todos os pacientes até o desfecho de cada caso.

2. Quais estudos embasaram os protocolos adotados?

As condutas terapêuticas com maior frequência de utilização, conforme visto na resposta ao item anterior, foram adotadas de acordo com a escolha do médico assistente de cada um dos usuários. Estes, certamente se utilizaram de todo o conhecimento adquirido durante a formação e experiência profissional para a escolha da abordagem terapêutica mais adequada para cada um dos pacientes atendidos.

Como já dito, trata-se de enfermidade nova sobre a qual se tinha pouco ou nenhum conhecimento. No transcorrer do ano de 2020, alguns estudos a favor do tratamento na fase inicial da doença foram publicados, eis alguns deles:

1. Gautret et al., Int. J. of Antimicrobial Agents, doi:10.1016/j.ijantimicag.2020.105949;
2. Esper et.al 2020;
3. Cadegiani et al 2020;
4. Ly et al 2020;
5. Heras et al 2020;
6. Cangiano et al 2020;
7. Sulaiman et al., 2020;
8. Huang et al., Journal of Molecular Cell Biology, Volume 12, Issue 4, April 2020, 322–325, doi:10.1093/jmcb/mjaa014;
9. Tan, W et al, 2020;
10. Zhong N et al, 2020;
11. Raoult, D et al, 2020;
12. Skipper et al., Annals of Internal Medicine, doi:10.7326/M20-4207;
13. Risch, H American Journal of Epidemiology, kwaa093, 27 May 2020, doi:10.1093/aje/kwaa093;
14. Risch, H American Journal of Epidemiology, Volume 189, Issue 11, November 2020, Pages 1444–1449, https://doi.org/10.1093/aje/kwaa152;

Repise-se que todas as informações divulgadas ao corpo médico do Grupo, consistiram apenas em pontos de partida para discussão acerca da melhor abordagem terapêutica dos pacientes, havendo plena autonomia daqueles profissionais para a escolha do tratamento mais adequado, conforme será mais bem detalhado na resposta ao quesito seguinte.

3. Quais os medicamentos recomendados no "kit covid" da Hapvida? Os médicos e outros profissionais de saúde possuíam autonomia para adotarem tratamento diferente da prescrição dos medicamentos do "kit covid"?

Conforme apontado na resposta ao questionamento 1, foram várias as abordagens terapêuticas adotadas pelos médicos que assistiram os usuários do Hapvida, com os seguintes medicamentos, usados de maneira isolada ou combinada, compondo as prescrições: Dipirona, Formoterol/Budesonida, Vitamina D, Óxido de Zinco, Azitromicina, Prednisona, Hidroxicloroquina, Ivermectina e Eliquis.

Como já dito inicialmente, sobre os tratamentos prescritos pelos profissionais médicos, dentro de sua independência técnica e, obviamente, das normas éticas profissionais preconizadas pelos reguladores da profissão, a postura do Hapvida sempre foi de respeito à liberdade e autonomia técnica dos médicos para determinarem a conduta terapêutica mais adequada para cada paciente, em conformidade com o histórico individual e condição clínica.

Por certo, os próprios médicos, sobretudo diante de uma enfermidade nova, pandêmica, sem precedentes de atendimentos eficazes, atuando em uma

verdadeira guerra, estão naturalmente sujeitos a uma curva de aprendizagem, o que pode trazer mudança nas suas posturas assistenciais, inclusive atualizando-se com as novas pesquisas e estudos cotidianamente divulgados no mundo. O que o Hapvida tem por princípio é que os médicos que atendem aos seus beneficiários atuem dentro do que os reguladores admitem, de modo que não desbordem desse limite ético - profissional.

Ademais, o Hapvida, firme na convicção de que apenas os profissionais de saúde têm a capacidade técnica de prescrever o tratamento adequado, tem se esforçado para reforçar junto aos seus usuários a orientação de que busquem atendimento médico especializado tão logo sintam quaisquer sintomas sugestivos de Covid-19, evitando a automedicação. Inclusive, um dos motivadores da expansão da telemedicina no Grupo Hapvida (com até 80 mil consultas/mês de urgência, nos picos) durante a pandemia, além, claro, de garantir a segurança dos usuários, foi o de que, o receio dos usuários de se contaminarem ao se dirigirem a uma unidade de atendimento, os inclinasse a se automedicarem. Assim, o incremento da telemedicina foi mais uma importante medida na facilitação do acesso e segurança na orientação à saúde.

4. ***Houve orientação ou apoio do Ministério da Saúde ou de outro órgão do governo para adoção do "kit covid"?***

Não houve orientação ou apoio do Ministério da Saúde ou de outro órgão do governo para adoção de qualquer "kit covid".

5. Quantos "kits covid" foram comprados pela Hapvida? Detalhar, por tipo de medicamento e suplemento alimentar, mês a mês, a quantidade, a marca, o valor médio de compra e a forma de aquisição (com o nome das empresas que venderam).

Conforme apontado na resposta ao questionamento 1, foram várias as abordagens terapêuticas adotadas pelos médicos que assistiram os usuários do Hapvida. Deste modo, não há como fazer mensuração com base em parâmetros fechados em forma de "Kit" para estabelecer quantitativos específicos.

Todavia, na busca de atender integralmente a ordem dessa CPI, trazemos em anexo (**anexo 01**) planilha na qual detalhamos, por tipo de medicamento, mês a mês, a quantidade, a marca, o valor médio de compra dos medicamentos adotados no tratamento da Covid-19 pela rede assistencial do Grupo, bem como o nome das empresas fornecedoras dos mencionados medicamentos.

Por conter informações sensíveis, próprias de negociações comerciais particulares, que podem gerar impactos em negociações em curso ou futuras junto a outros fornecedores ou até mesmo abrir a concorrentes do setor de saúde suplementar importante informação da estrutura de custos da empresa, solicita-se que os dados relativos a preços sejam tratados com o devido sigilo, conforme os protocolos que essa CPI adota para casos da espécie.

É importante ressaltar que não foi adotado suplemento alimentar no tratamento do Covid-19, motivo pelo qual deixamos de apresentar tal informação.

Quanto a este ponto, ressalte-se ainda que, dentro de um planejamento voltado para a excelência no atendimento e carecendo de informações de prazo e intensidade da pandemia, o Grupo Hapvida sempre buscou adquirir medicamentos e suprimentos que permitissem atravessar as adversidades da pandemia. Inclusive, a empresa intensificou, na metade do primeiro semestre de 2021, a aquisição de todos os medicamentos e suprimentos voltados ao enfrentamento da Covid, uma vez que a segunda onda veio em boa parte das praças de atuação da empresa duas vezes mais intensa que a primeira.

É bem verdade que, atualmente, a empresa possuiu largo estoque destes medicamentos, todavia, não poderia correr o risco de a segunda onda ser ainda mais intensa do que efetivamente foi, ou que viessem outras ondas seguintes, inclusive em decorrência de variantes.

6. Quantos kits foram distribuídos pela Hapvida a seus clientes? Discriminar o que foi distribuído nas unidades e os que foram enviados para as residências dos beneficiários.

Conforme apontado nas respostas aos questionamentos 1 e 5, foram várias as abordagens terapêuticas adotadas pelos médicos que assistiram os usuários do Hapvida. Considerando que a dispensação dos medicamentos pelas farmácias do Grupo se dão de forma unitarizadas conforme prescrição médica e os Kits são customizados conforme a necessidade de cada paciente, de acordo com o entendimento médico levando em conta as particularidade de cada paciente, não é possível a mensuração em forma de "Kit". É importante ressaltar, ainda, que o sistema Hapvida não envia qualquer medicamento para a residência de seus beneficiários e não disponibilizou qualquer medicamento que não tivesse sido devidamente prescrito pelo médico assistente de cada um dos usuários.

7. A Hapvida realizou algum estudo ou pesquisa do "kit covid" em seus beneficiários, com uso hospitalar ou ambulatorial?

8. Há estudos dos efeitos da administração dos medicamentos do "kit covid"? Se sim, solicita-se cópia dos estudos.

Em razão da conexão dos assuntos tratados nas perguntas 7 e 8, estas serão respondidas simultaneamente.

O Hapvida esclarece que houve sim estudo acerca da administração de medicamentos a seus usuários no tratamento da Covid-19.

O Referido estudo (**anexo 2**), embora realizado com usuários dos planos de saúde ofertados pelo Hapvida, não consistiu em trabalho exclusivo do Hapvida. Contou com a participação de colaboradores do Grupo, mas também de pesquisadores de 3 instituições nacionais e internacionais, quais sejam, Universidade Federal do Ceará (Fortaleza/CE); Universidade de Fortaleza (Fortaleza/CE) e Yale School of Public Health (New Haven/CT, EUA).

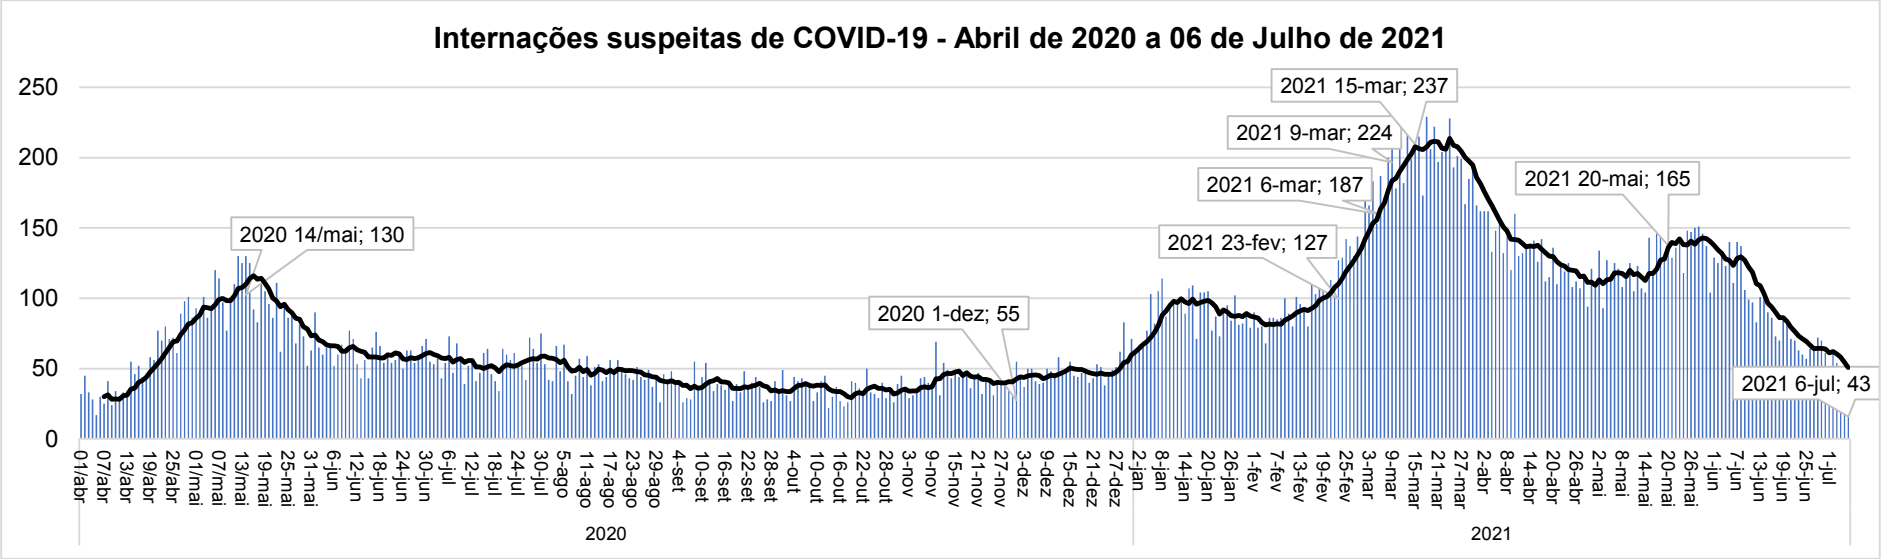
O estudo abordou, de maneira retrospectiva, os casos de prescrição de medicamentos antivirais logo após o início dos sintomas e prednisona a partir do sexto dia de início dos sintomas para tratar a inflamação pulmonar.

9. ***Quais as taxas de internação, de mortalidade e de letalidade por COVID 19 entre seus beneficiários?***

Como forma de auxiliar a visualização do número de novas internações diárias suspeitas de Covid-19 em todas as filiais do Hapvida, no período de abril de 2020 ao dia 6 de julho de 2021, colaciona-se o gráfico a seguir, de forma a ilustrar a evolução desses dados ao longo do tempo.

É possível depreender que a segunda onda de internações, iniciada no fim de dezembro de 2020, teve um padrão totalmente diferente de primeira onda, sendo a segunda onda significativamente mais intensa e duradoura.

INTERNAÇÕES POR COVID-19 NA REDE PRÓPRIA DO HAPVIDA



COEFICIENTE DE MORTALIDADE E TAXA DE LETALIDADE

Com relação à taxa de mortalidade, os dados e gráficos a seguir ilustram comparativo entre os dados de mortalidade por Covid-19 no universo de usuários do sistema Hapvida em relação aos dados totais do País. Com base nos dados disponibilizados, é possível perceber que o coeficiente de mortalidade dentre os usuários do Hapvida foi 24,8% menor que o coeficiente de mortalidade do Brasil. E ainda, no gráfico subsequente, se comparados os números de mortalidade dentre os usuários do Hapvida e aqueles das praças (cidades de atuação) do Hapvida, o coeficiente de mortalidade é ainda menor, o qual seja, 38,8% menor.

COEFICIENTE DE MORTALIDADE HAPVIDA E DO BRASIL (CONSIDERANDO TODA A POPULAÇÃO BRASILEIRA)

	População	Números de Óbitos por COVID-19 acumulados até o dia 06/07/2021	Coeficiente de Mortalidade***	Diferença (%) do Coeficiente de Mortalidade (Hapvida/Brasil - 1)
Brasil	212.000.000*	526.892**	248,534	
Hapvida	3.500.000	6.534	186,686	- 24,8%

* População do Brasil estimada pelo IBGE para 2020. Disponível em: https://cidades.ibge.gov.br/brasil/panorama

** Portal Coronavírus Brasil. Disponível em: https://covid.saude.gov.br/

***Coeficiente de Mortalidade = $\frac{\text{Número de Óbitos por COVID-19 confirmados}}{\text{População}}$ ×100.000 habitantes

O gráfico acima retrata o coeficiente de mortalidade dentre usuários do Hapvida e do Brasil. Considerando os valores calculados, o coeficiente de mortalidade dentre usuários do Hapvida é 24,8% menor que o coeficiente de mortalidade do Brasil.

COEFICIENTE DE MORTALIDADE HAPVIDA E DO BRASIL (CONSIDERANDO POPULAÇÃO DO BRASIL DENTRO DA ÁREA DE ATUAÇÃO PRINCIPAL DO HAPVIDA)

	População	Números de Óbitos por COVID-19 acumulados até o dia 06/07/2021	Coeficiente de Mortalidade***	Diferença (%) do Coeficiente de Mortalidade (Hapvida/Brasil -1)
Brasil	21.684.900*	66.182**	305,199	
Hapvida	3.500.000	6.534	186,686	- 38,8%

* População do Brasil estimada pelo IBGE para 2020. Disponível em: https://cidades.ibge.gov.br/brasil/panorama

** Portal Coronavírus Brasil. Disponível em: https://covid.saude.gov.br/

***Coeficiente de Mortalidade = $\frac{\text{Número de Óbitos por COVID-19 confirmados}}{\text{População}}$ ×100.000 habitantes

**** Para a população do Brasil (Área de Atuação do Hapvida), foi feita a soma da população das cidades com registros de óbitos do Hapvida (Recife, Fortaleza, Manaus, Belém, Salvador, Aracaju, São Luís, Maceió, Natal, Mossoró, João Pessoa, Teresina, Joinville, Goiânia, Ribeirão Preto, Bauru, Franca, Sertãozinho, Lins, Araraquara, Limeira e São José dos Campos), considerando a estimativa populacional para 2020 do IBGE.

O coeficiente de mortalidade dentre usuários do Hapvida é 38,8% menor que o coeficiente de mortalidade do Brasil nas cidades consideradas.

COEFICIENTE DE LETALIDADE

Vistos os dados de mortalidade, é importante ressaltar que controles estatísticos realizados pelo Grupo são de mortalidade, e não de letalidade. Isto porque, é praticamente impossível realizar a aferição de letalidade. Temos evidência de vários estudos que afirmam que a baixa taxa de testagem é um dos fatores que pode resultar na subestimação significativa do número de

infectados e, consequentemente, na menor qualidade dos indicadores de incidência e letalidade[3][4]. Dessa forma, os estudos apontam, de maneira inequívoca, que a taxa de mortalidade é um indicador mais fidedigno, frente à taxa de incidência e letalidade[5], pois geralmente há maior subestimação no número de casos de infecção por SARS-CoV-2 que do número de óbitos pela Covid-19[6]. Lembra-se que, para se aferir a letalidade, faz-se necessário ter ciência efetiva de todo o conjunto de usuários que efetivamente contraíram a doença, para a partir de então, dividir o número de mortos por este universo. Assim, seria necessário que a empresa fizesse uma busca ativa, por exemplo, fazendo contato com todos os usuários, para saber se fizeram algum teste de Covid-19, mesmo que rápido; ou até mesmo para identificar aqueles pacientes assintomáticos que, fazendo testes posteriormente, descobriram que tiveram contato com o vírus, ou ainda mesmo; aqueles que tiveram contato com pessoas infectadas, tiveram sintomas leves, e sequer fizeram o teste por entenderem que se tratava realmente da Covid-19, mas não procuraram qualquer atendimento médico por conta dos leves sintomas.

10. Quantos e qual a proporção de pacientes da Hapvida morreram de hepatite medicamentosa, hemorragia digestiva, insuficiência renal ou problemas respiratórios entre janeiro 2019 e junho de 2021? Informar dados mês a mês.

De forma a atender o quanto solicitado, o Hapvida apresenta dados compilados em gráficos que auxiliarão a compreensão do tema. O primeiro desses gráficos ilustra a distribuição mensal da totalidade de óbitos no período de janeiro de 2019 a maio de 2021, sendo que a linha tracejada representa a média móvel dos últimos dois meses.

É possível perceber que o número de óbitos aumentou de maneira significativa nos períodos que correspondem a primeira e segunda ondas da COVID-19, assim como ocorreu em todo o Brasil.

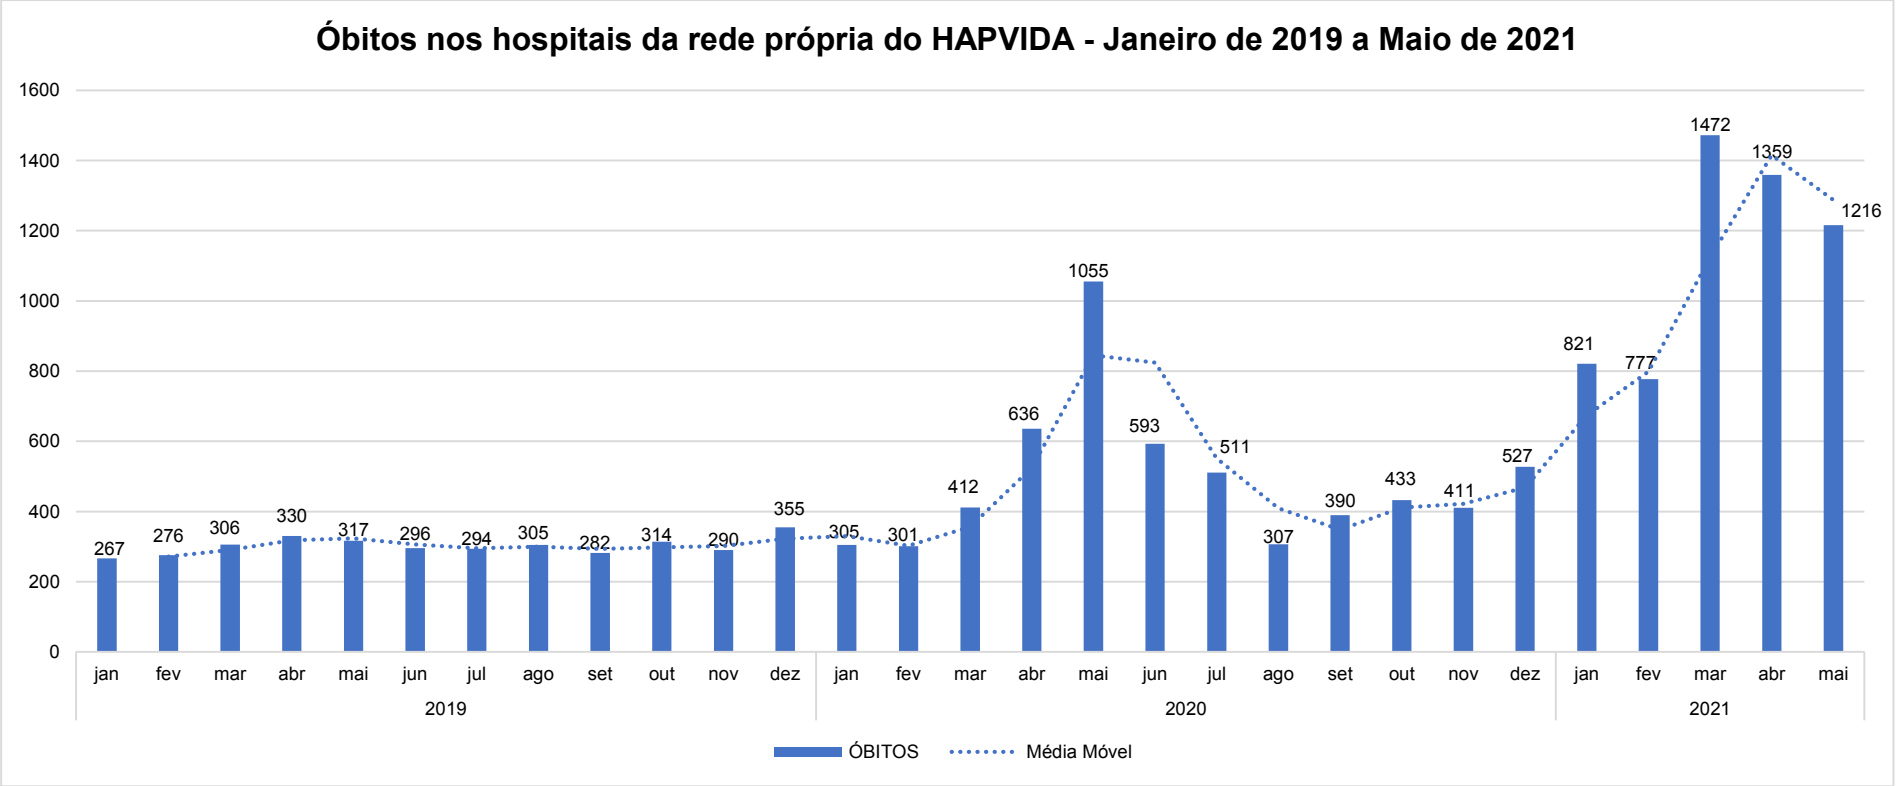
CONSOLIDADO GERAL DE ÓBITOS HAPVIDA - JANEIRO DE 2019 A MAIO DE 2021

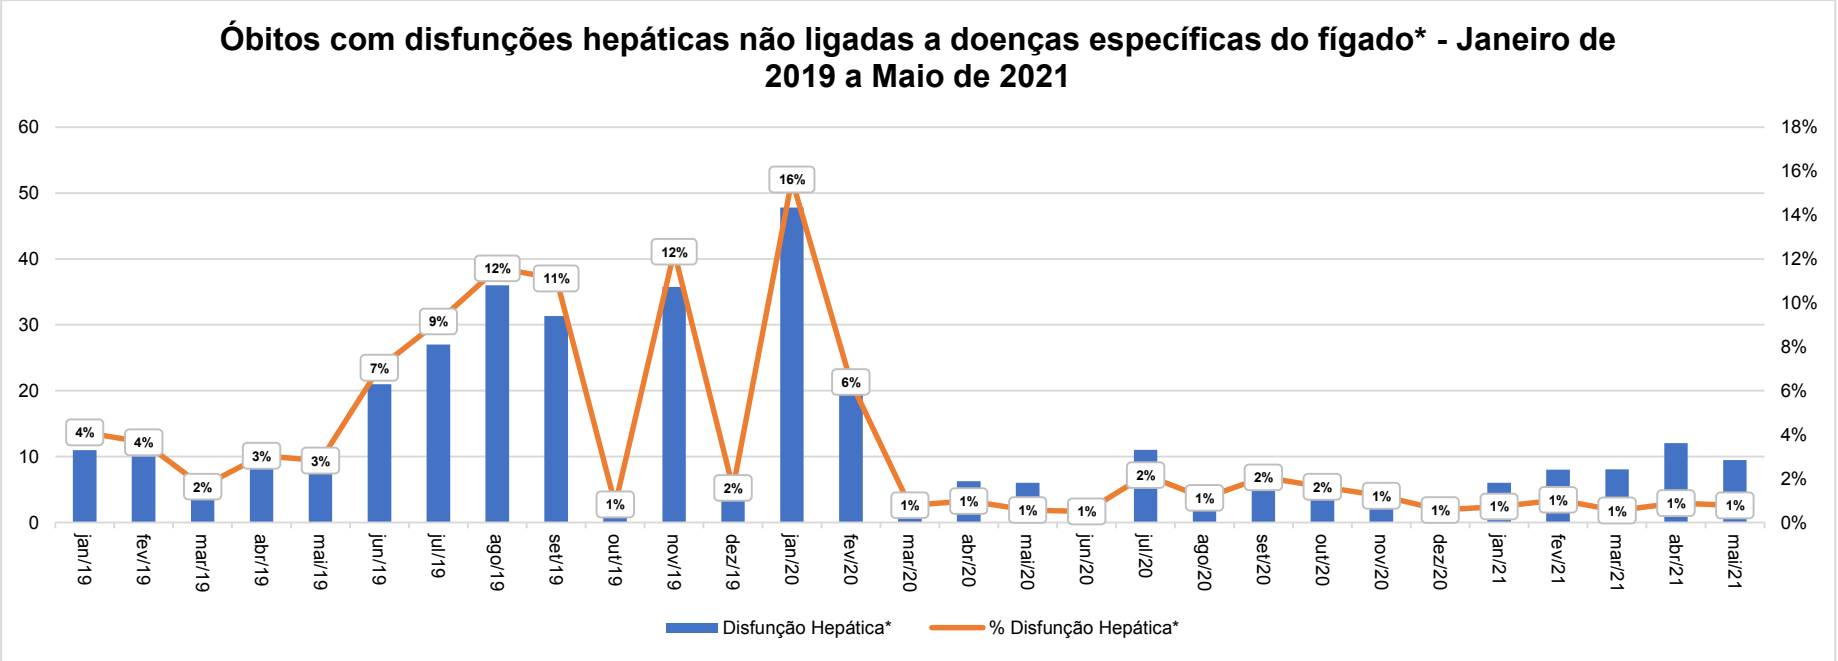


O gráfico seguinte, por sua vez, reflete os óbitos relacionados a disfunções hepáticas não ligadas a doenças específicas do fígado. Tal metodologia foi feita em razão de não existir CID próprio para hepatite medicamentosa.

Percebe-se que, até fevereiro de 2020, a média percentual de óbitos correlacionados a disfunções hepáticas não ligadas a doenças específicas do fígado era de 6%. Após março de 2020, a média percentual desse tipo causa de óbitos passou a ser 1%.

DISTRIBUIÇÃO DE ÓBITOS POR CAUSAS ESPECÍFICAS - JANEIRO DE 2019 A MAIO DE 2021

DISFUNÇÕES HEPÁTICAS NÃO LIGADAS A DOENÇAS ESPECÍFICAS DO FÍGADO

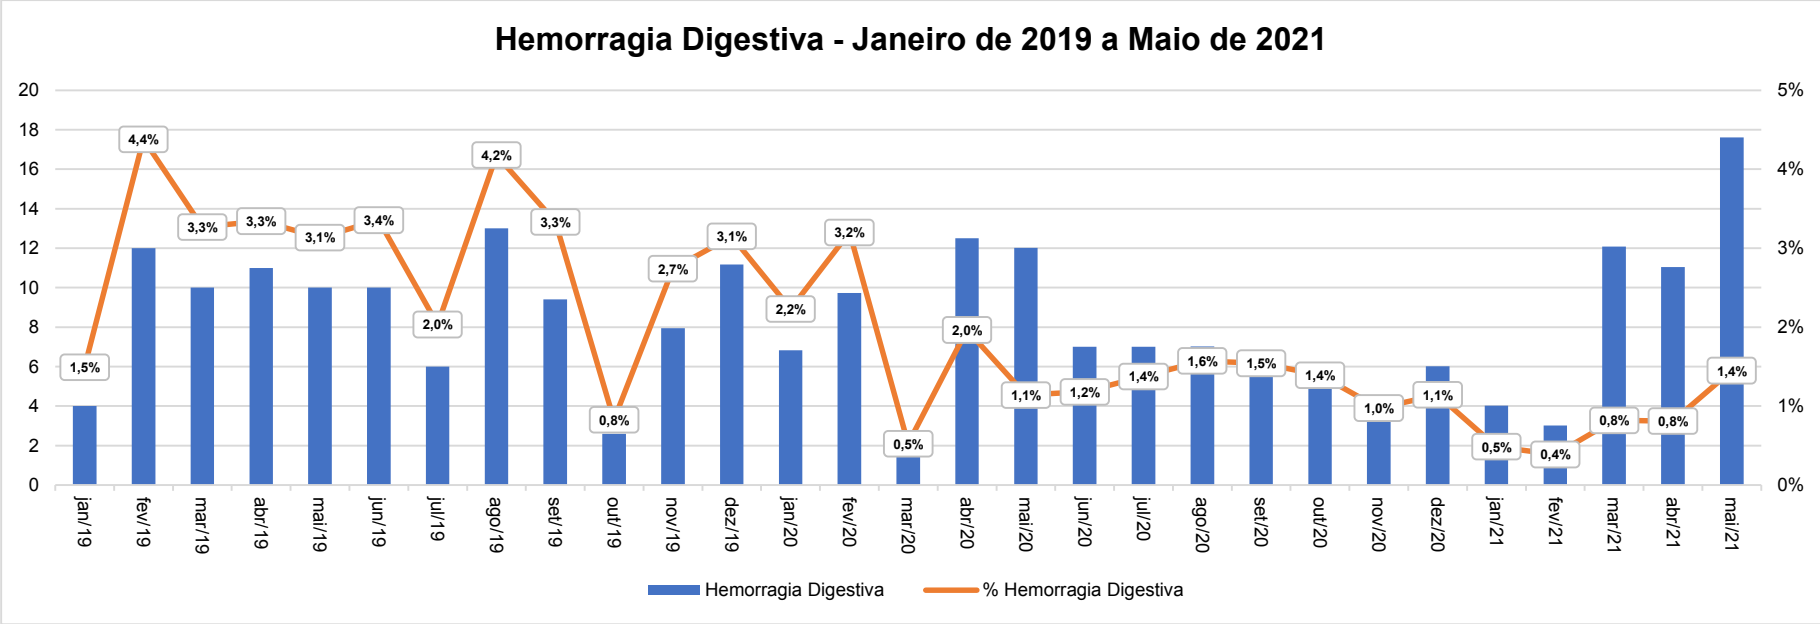


*CIDs relacionados a disfunções hepáticas não ligadas a doenças específicas do fígado: K71, K710, K711, K712, K716, K718, K719, K72, K720, K721, K729, K752, K758, K759, K76, K760, K761, K762, K763, K768, K769, K77 e K778. Utilizou-se essa metodologia pois não existe um CID específico para hepatite medicamentosa.

Por sua vez, os gráficos seguintes trazem a distribuição de óbitos por causas específicas, quais seja, hemorragias digestivas, problemas respiratórios e insuficiência renal. O percentual de óbitos ligados a hemorragia digestiva variou ao longo do período analisado de 1 a 4%, sem um padrão específico de distribuição. Vejamos:

DISTRIBUIÇÃO DE ÓBITOS POR CAUSAS ESPECÍFICAS - JANEIRO DE 2019 A MAIO DE 2021

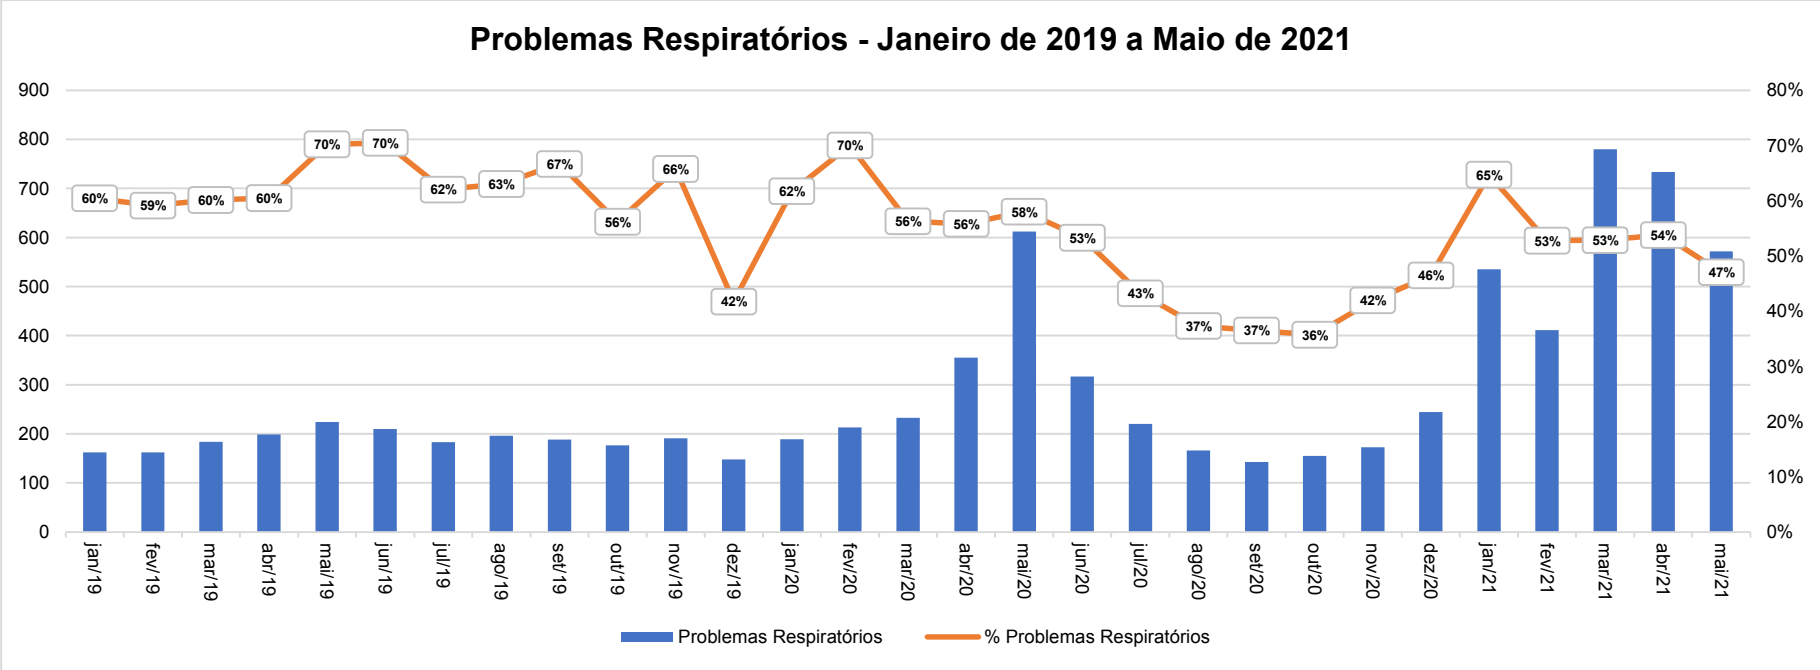
HEMORRAGIAS DIGESTIVAS



Conforme gráfico abaixo, percebe-se, no período de abril de 2020 a junho de 2020, bem como de janeiro de 2021 a maio de 2021, um aumento em número absoluto de óbitos ligados a problemas respiratórios. Os valores percentuais nesses dois períodos, todavia, estão dentro da faixa de variação percentual observada no período anterior à pandemia.

DISTRIBUIÇÃO DE ÓBITOS POR CAUSAS ESPECÍFICAS - JANEIRO DE 2019 A MAIO DE 2021

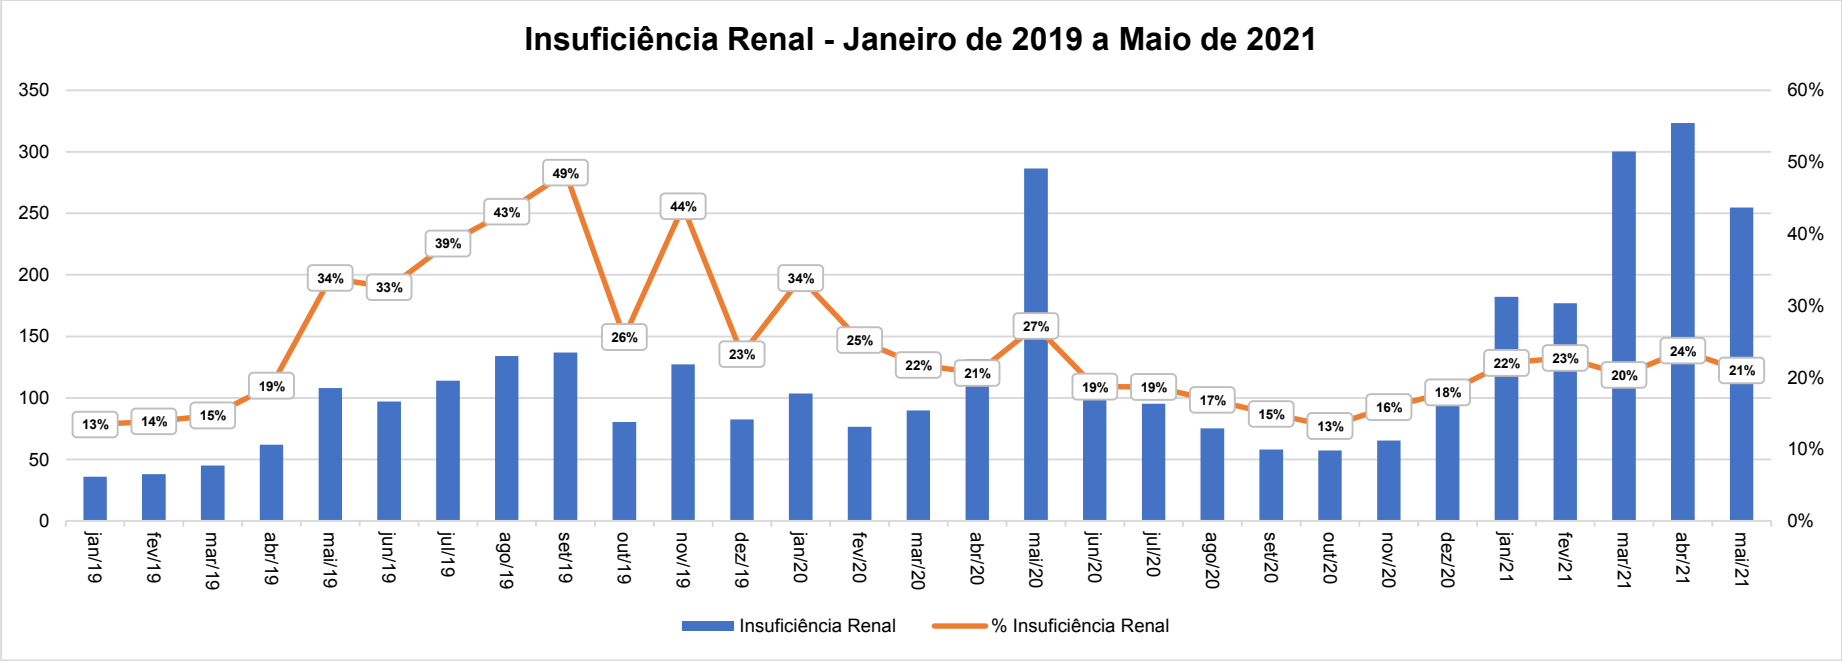
PROBLEMAS RESPIRATÓRIOS



Com relação aos óbitos por insuficiência renal, conforme gráfico abaixo, nota-se que, não obstante tenha havido um crescimento em números absolutos durante a pandemia, os percentuais frente aos óbitos totais mantiveram-se dentro da faixa de variação ou inferiores aos percentuais observados no período anterior à pandemia.

DISTRIBUIÇÃO DE ÓBITOS POR CAUSAS ESPECÍFICAS - JANEIRO DE 2019 A MAIO DE 2021

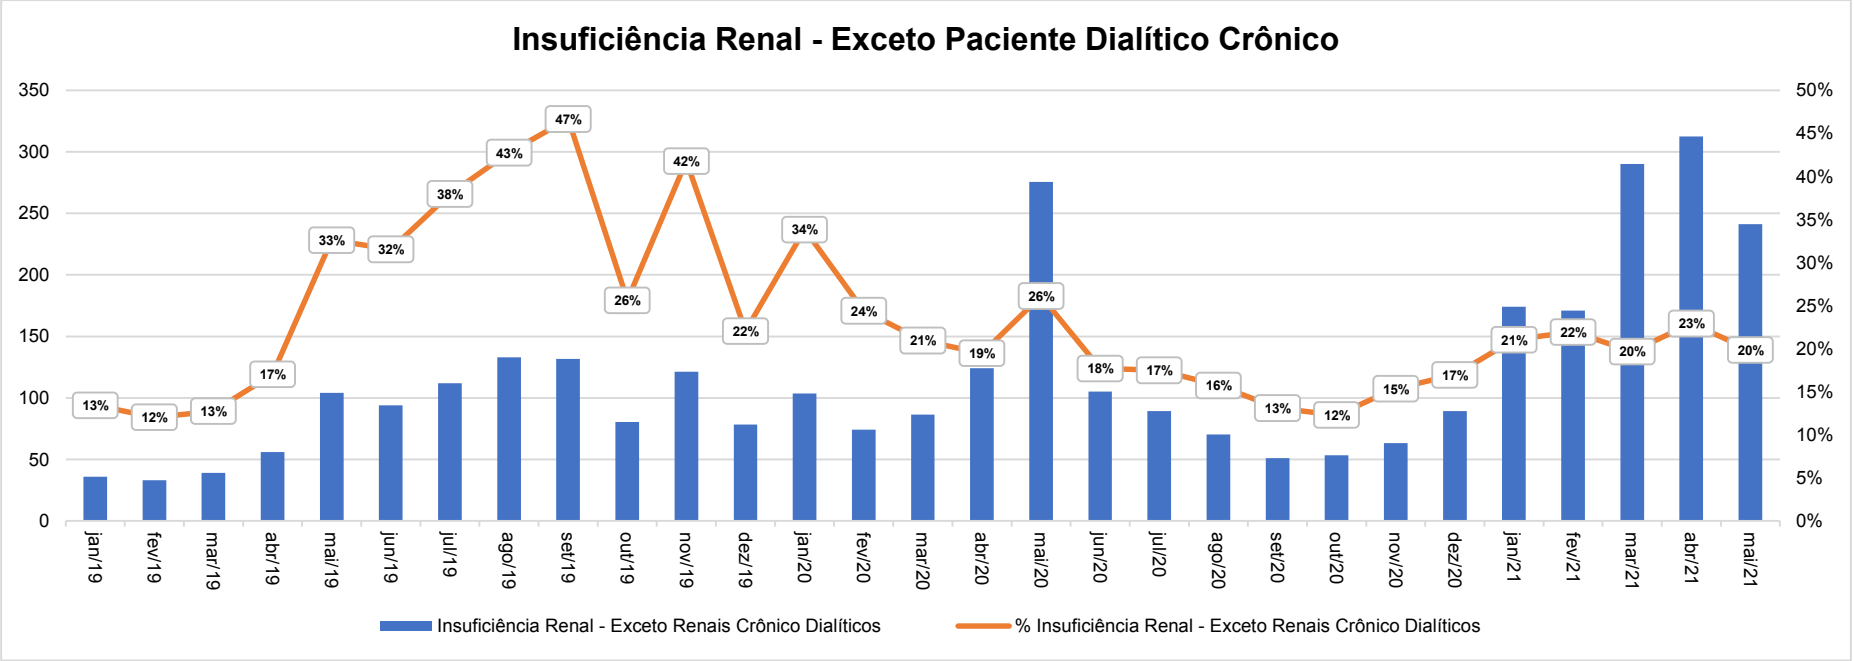
INSUFICIÊNCIA RENAL



Por fim, com relação aos óbitos por insuficiência renal, excetuados os pacientes dialíticos crônicos, verifica-se que o gráfico abaixo é muito semelhante ao anterior, com pequena variação percentual. Vejamos:

DISTRIBUIÇÃO DE ÓBITOS POR CAUSAS ESPECÍFICAS - JANEIRO DE 2019 A MAIO DE 2021

INSUFICIÊNCIA RENAL, EXCETUANDO-SE OS PACIENTES DIALÍTICOS CRÔNICOS



11.Qual conceito de tratamento paliativo na rede da Hapvida e quais as providências adotadas para esses tratamentos paliativos para COVID 19?

O conceito de tratamento paliativo da rede Hapvida está alinhado com o que a comunidade médico-científica preconiza, no sentido de que tal tratamento consiste na adoção de abordagens promotoras da qualidade de vida dos pacientes acometidos por enfermidades que geram restrições e ameaça à própria continuidade da vida. Com isso, intenciona-se amenizar os sofrimentos, físicos e psicossociais, decorrentes do curso da doença.

A Covid-19, como infelizmente todos sabemos, traz enorme sofrimento físico e psicológico ao paciente e aos seus familiares, que ficam alijados do acompanhamento presencial em virtude do risco de contágio.

A política de enfrentamento à Covid-19 foi estabelecida na rede Hapvida de forma alinhada às recomendações de Conselhos Regionais de Medicina (por exemplo, as Orientações e Recomendações do CREMEC – Conselho Regional de Medicina do Estado do Ceará – número 8, aprovada em abril de 2020).

Dessa forma, há equipes multidisciplinares para acolherem os pacientes, principalmente aqueles integrantes de grupos portadores de doenças crônicas e em condição de maior fragilidade, bem como para estabelecer um plano de cuidados especiais, manejo de sintomas e comunicação de notícias sensíveis.

Adicionalmente, como já referido na parte preambular dessa resposta, a Hapvida estruturou todo um suporte para desospitalização, com telemedicina, atendimento domiciliar de fisioterapia e, quando necessário, oxigênio suplementar.

12. Quais as providências quando a demanda por leitos de UTI é superior ao número de leitos próprios de UTI?

Não houve na rede assistencial do Hapvida demanda por leitos de UTI superior ao número de leitos próprios de UTI, considerando os que já compunham a rede e aqueles que foram criados ou convertidos ao longo da pandemia.

O Sistema Hapvida sempre teve por filosofia e premissa operacional, a fim de garantir segurança assistencial aos seus beneficiários, manter sobra de leitos em suas áreas de atuação. Alguns exemplos disso foram os casos de Manaus, em que tínhamos apto a ser inaugurado o Hospital Rio Solimões, de Belém, com a nova torre do Hospital Rio mar, de Recife, com o Hospital Unicordis (hoje, Agamenon Magalhães), além de outros casos em outras praças.

Essa abordagem operacional permitiu que, ao longo da pandemia, fossem incrementados, com a agilidade que a situação exigia, mais de 1.000 leitos de UTI (entre leitos criados e transformados). Dessa forma, em face do planejamento traçado, não experimentamos situação em que a taxa de ocupação fosse superior à capacidade instalada/ampliada na rede Hapvida. Isto, sem considerar as novas aquisições de empresas pelo grupo, o que somada com este incremento já mencionado de leitos, fez com que passássemos de 1824 leitos (em fevereiro de 2019) para 3973 leitos em todo o grupo.

Além disso, o fato de sermos uma empresa verticalizada, com hospitais em todas as regiões do País, bem como da primeira onda da pandemia ter se comportando como tal, foi possível um remanejamento contínuo de estrutura (equipes médicas e multidisciplinares, insumos, equipamentos de proteção, respiradores etc.) de locais ainda não atingidos fortemente para aqueles em que enfrentavam a agudização da pandemia. Nesse operacional de guerra, foram realizados mais de 70 (setenta) voos fretados, que se somaram a um total de gastos na ordem de 145 (cento e quarenta e cinco) milhões de reais, em 2020, e de 197 (cento e noventa e sete) milhões de reais, em 2021 (até maio).

Ainda como diferencial do modelo verticalizado de operação para a manutenção de suficiência de leitos ao longo da pandemia, foi possível, igualmente com muita agilidade, converter leitos de Enfermaria em leitos de UTI ou leitos pediátricos em leitos adultos (e vice-versa), sempre de acordo com a demanda específica de cada região atingida.

Tanto esforço conjunto, planejamento e emprego de recursos financeiros e humanos nos permitiu uma feliz e gratificante constatação: mesmo nos momentos mais críticos da 1ª e 2ª ondas, não faltou qualquer tipo de leito especializado ou profissionais qualificados para atendimento de nossos usuários, bem como mantivemos estoque de medicamentos, materiais de EPI e equipamentos, absolutamente suficientes a atender em todos os momentos a demanda de nossos usuários e colaboradores.

13. Quais os eventos patrocinados pela Hapvida nos anos de 2020 e 2021? Detalhar temas dos eventos, público-alvo, público presente, empresa contratada para promover o evento e custo de cada evento.

No **anexo 3**, trazemos de forma detalhada, conforme requerido, as informações dos eventos patrocinados pelo Hapvida nos anos de 2020 e 2021.

ANDERSON LUIS DE ALVARENGA NASCIMENTO
Head da Rede Própria do Grupo Hapvida

A B S T R A C T

Background: For the past few months, HMOs have faced crowded emergency rooms and insufficient hospital and intensive-care-unit beds, all from the worst pandemic of this century, COVID-19.
Methods: In a large HMO in Brazil, our approach was to allow treating physicians to prescribe antiviral medications immediately at presentation, and prednisone starting on day-6 of symptoms to treat pulmonary inflammation. We implemented this COVID-19 protocol for outpatients and studied 717 consecutive SARS-CoV-2-positive patients age 40 years or older presenting at our emergency rooms.
Results: Use of hydroxychloroquine (HCQ), prednisone or both significantly reduced hospitalization risk by 50–60%. Ivermectin, azithromycin and oseltamivir did not substantially reduce risk further. Hospitalization risk was doubled for people with type-2 diabetes or obesity, increased by two-thirds for people with heart disease, and by 75% for each decade of age over age 40. Similar magnitudes of reduced risk with HCQ and prednisone use were seen for mortality risk, though were not significant because of only 11 deaths among the 717 patients. No cardiac arrhythmias requiring medication termination were observed for any of the medications.
Conclusions: This work adds to the growing literature of studies that have found substantial benefit for use of HCQ combined with other agents in the early outpatient treatment of COVID-19, and adds the possibility of steroid use to enhance treatment efficacy.

1. Introduction

Mankind has been facing one of the greatest challenges of the XXI century: a pandemic [1] caused by a new virus, SARS-CoV-2, thought to be transmitted by airborne particles and droplets and contact with contaminated surfaces or objects [2]. Clinical manifestations of coronavirus disease 2019 (COVID-19) patients range from asymptomatic to mild non-specific signs and symptoms to severe pneumonia with organ function damage and eventual mortality [3,4]. There is a clear need to try to stop disease progression as early in the disease process as possible. Infected patients with comorbidities such as heart failure, type-2 diabetes, asthma or chronic obstructive pulmonary disease and obesity, and patients over sixty years of age are at substantially higher risk to develop severe disease and tend to have higher risks of death [5–7]. Many drugs have been tried in hospitalized patients, with largely discordant results [8–11]. Randomized double-blind controlled trials demonstrating benefit or lack of benefit of drugs in high-risk outpatients will not be available any time soon, as many clinical sites are still recruiting patients [12]. Early outpatient illness is very different than hospitalized severe disease and treatment therefore will differ between these two distinct groups. Relatively little is established about utility of medications in early outpatient treatment. Currently [13,14] it is understood that COVID-19 is at least a four-phase illness: phase 1 is viral replication, followed by pulmonary inflammation in phase 2, “cytokine storm” and acute respiratory distress in phase 3, and disseminated multi-organ involvement in phase 4. For treatment at the beginning of the illness, there are indications that chloroquine and especially hydroxychloroquine (HCQ) may be beneficial [15–18], but no specific antiviral

medications have demonstrated proven efficacy as yet [19,20]. Recently, the Brazil Federal Committee for Medicine has approved the prescription of chloroquine and HCQ for clinically suspected COVID-19 patients at the physician's discretion with informed consent [21] and the Health Ministry has also endorsed the use of these medications [22]. Brazil has the highest rate in South America in the ranking of COVID-19 deaths, with more than 4.2 million people infected in the country [23] in circumstances of a large population still to be affected and with economic difficulties resulting in inadequate social distancing. Data over March–May from the Federal Health Ministry [24] show that more than 90% of hospitalized patients with severe respiratory distress who were tested were positive for SARS-CoV-2, with less than 5% detected with influenza. Therefore, we assumed in clinical practice that most patients coming to the emergency room with influenza-like symptoms would have COVID-19. With all that, we developed a protocol for early recognition and treatment of high-risk patients (in our population, age greater than 40 years because of generally poorer health standards, or with comorbidities) who would come to our outpatient network of emergency rooms with influenza-like symptoms: fever, cough, myalgia and headache, among others, and receive early treatment, provided to patients at the first doctor visit, using physician discretion from among HCQ, azithromycin, ivermectin, oseltamivir, zinc sulfate, nitazoxanide and prednisone (the last starting on day-6 of symptoms). We evaluate here risks of subsequent hospitalization based upon outpatient use of these various medications.

2. Methods

Patient data were analyzed from electronic charts of health maintenance organization (HMO) Hapvida Saúde, the largest Brazilian HMO with 6 million members spread over five regions of the country. Data were collected after informed consent and Institutional Ethics Committee (4.087.824 CEP-University Fortaleza UNIFOR) approval for this study. To-date, during the pandemic, more than 300 000 monthly emergency room (ER) consults have occurred. Patients were all seen at the ERs of the widespread country hospital network and admitted if indicated. At the beginning of the pandemic in Brazil, late March–April 2020, the north and northeast cities were more affected, with a great number of ER consults and hospital and intensive-care-unit admissions. A protocol for early treatment of COVID-19 was developed by a team of senior HMO medical staff and started in early May; it included clinical recognition of the commonly described main COVID-19 signs and symptoms, and protocol criteria assessment for hospital admission vs outpatient care. Patients coming with influenza-like symptoms such as fever, sore throat, myalgia, arthralgia or coryza would enter the COVID-19 protocol. Patients presenting with hypoxia, defined as the need of oxygen to maintain an oxygen saturation greater than 92%, respiratory rate of or greater than 24 respirations/minute, hypotension defined as systolic pressure less than 90 mm Hg or diastolic pressure less than 60 mm Hg, or with confusion or extreme lethargy were immediately admitted to the hospital. The remaining patients over age 40 or with comorbidities were defined as high-risk and treated as outpatients. The protocol specifics were chosen by the attending physician, and all of its steps were monitored for quality assurance. The protocol was largely automated through on-screen suggestions and physician choice boxes leading to successive screens, medication prescription choices, etc. After discharge from the ER, patients received paper charts instructing them on isolation, symptoms to expect and medications to use, and QR codes for telemedicine, chat or phone consults. Patients were instructed to return if symptoms of dyspnea, confusion or lethargy occurred. Telemedicine was also always available to HMO patients on the HMO website. For discharged patients, the COVID-19 protocol included (all as oral medications), as chosen by doctors and patients: HCQ as first-line treatment, if used (400 mg bid day 1, 400 mg qd days 2–5), prednisone (1 mg/kg qd x 5 days, maximum 80 mg/day, no taper), azithromycin (500 mg qd x 5 days), ivermectin (12 mg qd x 2 days), plus symptom relievers. Zinc sulfate, oseltamivir and nitazoxanide were also available to be prescribed but were used infrequently. As doctors quickly found that most of the prescribed HCQ was not available at common drugstores, if prescribed it was decided to offer the drug free of charge to all patients who only had to sign informed consent to receive it. Data were collected from the HMO database for consecutive patients registered from May 11th to June 3rd, 2020. We selected all patients 40 years and older who tested positive for SARS-CoV-2 using a real-time reverse-transcriptase-polymerase-chain-reaction (RT-PCR) assay of nasal and pharyngeal swab specimens [25]. To be clear, while all relevant patients with clinically likely COVID-19 were offered treatment by the HMO, for the present report, we analyzed all those patients whose infections were subsequently confirmed by laboratory assay. The collected data included patient characteristics and comorbidities, age, gender, history of type-2 diabetes, hypertension, cardiac illness, pulmonary disease, other conditions, and facts of hospital admission and death. Collected data were analyzed with multivariate unconditional logistic regression models to determine associations with medication use as well as other risk factors for hospital admission and death. Age (in decades) and presentation delay (days) were treated as continuous covariates whereas all other variables were dichotomous. In addition to the medications, all of the presentation characteristics and comorbidities in Table 1 were examined for statistical significance and for confounding adjustment. Death outcomes were those considered to be due to complications associated with COVID-19. A two-sided p-value less than 0.05 was considered statistically significant.

3. Results

From May to June, 24 927 patients were included in the COVID-19 protocol, 56% from the northeast Brazil states of Ceará, Bahia and Pernambuco. Seven hundred seventy-two patients (3.1%) were admitted to the hospital and 52 died (6.7% of those hospitalized, 0.2% of the whole cohort). Within the cohort of 24 927 patients, because of scarcity of the tests and without selection by disease severity, 3307 had testing for SARS-CoV-2 performed; 1570 were age 40 years or over and 715 (45%) of these patients had positive RT-PCR assays for SARS-CoV-2. We also included 2 patients who had positive SARS-CoV-2 serology (Table 1). Three hundred seventy-two patients were female (52%); the mean age was 50.6 years (range 40–93 years). The average delay from the start of symptoms to ER visit was 4.6 days. Common presenting symptoms included shortness of breath (198, 28%), cough (504, 70%), fever (452, 63%), myalgia (306, 43%) and sore throat (173, 24%); 221 (31%) patients had histories of cardiovascular disease, 123 (17%) had diabetes type 2, 73 (10%) were obese and 25 (3.5%) had chronic pulmonary disease. There were 114 hospital admissions (16%) and of these, 19 (17%) patients required mechanical ventilation and 11 (9.6%) patients died. The median time between start of symptoms and hospital admission was eight days; between hospital admission and death was seven days. One hundred twenty-two of the 717 patients received none of the medications, and 33 (27%) of them required hospitalization.

Associations with fact of eventual hospitalization are given in Table 2. The multivariate logistic regression model presented in the table shows that age, obesity (BMI $>$ 30) and dyspnea were very substantial risk factors for hospital admission. Each additional decade of age over age 40 multiplied the risk of admission by a factor of 1.75. Use of prednisone and use of HCQ were both associated with significantly reduced risk, and both drugs used together seemed to perform slightly better than either one alone. When the analysis was restricted to exclude patients hospitalized within five days, thus not eligible to receive prednisone, the results were essentially unchanged. History of pulmonary disease, presentation delay, or presentations with cough, myalgias, sore throat, headache or diarrhea were not associated with risk of hospitalization. Presentation with fever, however, had OR = 1.93 (95%CI 1.18–3.14), p = .0085, but did not change the associations seen in Table 2, and with consideration for multiple comparisons of the various

Table 2
Multivariate logistic regression risk factors for hospitalization of tested-positive Covid-19 outpatients at Hapvida HMO, Brazil.

Exposure	Regression Exposure Units	Average of or Number Not Hospitalized (n = 603)	Average of or Number Hospitalized (n = 114)	OR (95% Confidence Interval)	*P*-value
Age at diagnosis (continuous)	Per decade	49.4	57.1	1.75 (1.42–2.16)	$10^{-6.7}$
Gender	Female vs Male	314 vs 289	58 vs 56	0.87 (0.56–1.35)	.52
Dyspnea at diagnosis	Yes vs No	148 vs 455	50 vs 64	2.07 (1.32–3.26)	.0017
Obesity	Yes vs No	55 vs 548	18 vs 96	2.38 (1.24–4.57)	.0090
Diabetes Mellitus Type 2	Yes vs No	83 vs 520	40 vs 74	2.11 (1.26–3.52)	.0045
Heart Disease	Yes vs No	162 vs 441	59 vs 55	1.67 (1.03–2.70)	.037
Prescription of both hydroxychloroquine and prednisone	Both vs not both	143 vs 460	16 vs 98	0.40 (0.21–0.75)	.0042
Prescription of hydroxychloroquine only	Yes vs no	150 vs 453	25 vs 89	0.45 (0.25–0.80)	.0065
Prescription of prednisone only	Yes vs no	125 vs 478	14 vs 100	0.51 (0.26–0.99)	.049

patient characteristics, may not be statistically significant. Based on the model of Table 2, we also examined use of azithromycin, OR = 0.93 (95%CI 0.60–1.45) and use of ivermectin, OR = 1.17 (95%CI 0.72–1.90). Zinc prescription was not given on its own and where prescribed was highly correlated with other medication use and had little independent information for estimation of its own association in the adjusted model. When the model of Table 2 was performed including only individuals who had a history of at least one condition of obesity, diabetes or heart disease (73 hospitalized patients and 232 not hospitalized), the associations with the medications largely remained: for both HCQ + prednisone, OR = 0.33 (95%CI 0.14–0.81), p = .015; for HCQ alone, OR = 0.41 (95%CI 0.20–0.83), p = .013; and for prednisone alone, OR = 0.75 (95%CI 0.29–1.93), p = .55. We also examined the model of Table 2 for the three medication exposures vs receipt of no medications at all. For both HCQ + prednisone, OR = 0.29 (95%CI 0.14–0.58), p = .00053; for HCQ alone, OR = 0.32 (95%CI 0.17–0.63), p = .00081; and for prednisone alone, OR = 0.37 (95%CI 0.18–0.77), p = .0082. Similar magnitudes of association as these were seen for these medications among all 717 subjects for death as the outcome, but the small numbers of deaths precluded statistical significance of these associations. However, the strongest predictors of mortality overall were obesity, OR = 13.0 (95%CI 2.35–72.3), p = .0033, and diabetes, OR = 4.65 (95%CI 1.20–18.1), p = .027. We observed no cardiac arrhythmia events requiring medication termination for any of the medications used in the 717 patients that we analyzed, and no deaths attributable to such arrhythmias.

4. Discussion

SARS-CoV-2 will cause greater mortality than any recent contemporary pandemic; only when the pandemic ends it will be possible to assess the full health, social and economic impact of this global disaster [26–28]. Preliminary data show that in developed countries, the impact will be huge. But in developing countries, where public health systems already face great challenges to provide basic health care to all in need, the impact will be several times greater [26–28]. These problems will not be solved anytime soon. In the midst of the SARS-CoV-2 pandemic, a feasible approach, with inexpensive drugs, relying on syndromic signs and symptoms rather than scarce laboratory tests may help many patients and will be even more important in developing countries. Around the world there are already over 28 million confirmed COVID-19 cases [29]. Brazil has the third-largest number, with 4.2 million cases and 128 000 deaths as of September 9th [29]. If this trend continues, in about six months, Brazil will have the worldwide largest number of deaths of any country.

In March 2020, the World Health Organization recommended the use of medications oseltamivir and antibiotics [30]. On March 28, 2020, the FDA issued an emergency use authorization for remdesivir and HCQ for patients in both clinical trials and with severe hospitalized disease [31]. Since then, pharmacological treatments have been controversial. On June 15 the FDA retracted its earlier authorization and on July 1 posted warnings about its use, leaving HCQ outpatient use not supported [32]. Countries such as China and India have issued guidelines

supporting the use of chloroquine or HCQ in COVID-19 [33,34]. Evidence of the real-world unimportance of arrhythmia and other cardiovascular adverse-event endpoints of HCQ and HCQ + AZ use is given in the large Oxford-based record-linkage study [35] and in a study of 40% of the English population [36]. Understanding the pathophysiology of COVID-19 in the different clinical stages of the disease is important, as treatments will change according to progression of the disease [13]. Our study showed that HCQ alone, prednisone alone, and HCQ plus prednisone did better than standard treatment for early stage COVID-19. It may be that the corticosteroid benefit involves low levels of type I and III interferons juxtaposed to elevated chemokines and high expressions of IL-6. Reduced initial innate antiviral defenses allow the virus to multiply, followed after a few days by relatively excess inflammatory cytokine production, allowing for steroids to reduce the latter in the early features of COVID-19, before appreciable pneumonia has occurred [37]. Hydroxychloroquine has a number of suggested beneficial actions for early COVID-19, not least of which is its non-immunosuppressive immunomodulatory activity [38].

Because all treatments have costs and benefits, treating all high-risk patients early would take a major effort from Brazil's Universal Public System (SUS) and its private HMOs, but would be much less expensive than hospital-based inpatient treatment, which would probably be impossible on the scale needed. Our study showed that about 10% of high-risk outpatients over age 40 treated with prednisone still required hospitalization, which is substantially better than the 24% among untreated patients, thus even this treatment plan could create a large hospital-bed demand. However, we found that even in hospital, these treated patients do better and their mortality is much lower.

In an ideal world, large randomized double-blinded controlled clinical trials establish evidence, but take time to complete and many are not large enough for the randomization to be sufficiently effective in reducing biases. To-date, treatment protocols have proposed drugs with antiviral activity, and with anti-inflammatory responses, such as therapeutic regimens of IFN-α+lopinavir/ritonavir and IFN-α+lopinavir/ritonavir + ribavirin, among others. While cost-effectiveness of these regimens have been challenged, HCQ is generic and has been prescribed for malaria for decades, as it has antiviral and anti-inflammatory properties. On March 27th, 2020 the Brazilian Federal Health Authority issued a note saying that it would treat severely ill patients in the Public System with HCQ [39]. On May 20th, the same authority issued another note that HCQ would be available for physicians to prescribe for outpatients and mild cases, according to symptoms and severity [22]. Prednisone is also generic and inexpensive and has been used for many decades and does not interact adversely with HCQ.

Our results demonstrate a positive benefit of HCQ and prednisone in decreasing hospital admissions in a high-risk population over 40 years of age with RT-PCR-positive SARS-CoV-2 infection when started at first doctor visit. A high-risk outpatient benefit of HCQ use has been summarized elsewhere [35] but to our knowledge this is the first time that efficacy of outpatient prednisone use has been reported. Use of these medications also showed some evidence of reduced mortality in the study group, and larger studies of mortality will be needed to validate this finding. We observed that outpatient hospitalizations of the larger group of suspected COVID-19 ER patients, from the same HMO database before vs after the protocol started, March–April vs May, decreased significantly, 23% vs 9%, and mortality declined from 1.75% to 1.39%. For May, our HMO data also show that the mortality was less than COVID-19 mortality for Brazil as a whole.

Our study has several limitations. This is a retrospective, chart-based study, and even though our initial sample of patients was large, with almost 25 000 patients, few of these patients were tested due to the scarcity of RT-PCR tests. Then, we chose to study only tested-positive SARS-CoV-2 patients to make sure we were dealing with confirmed cases of COVID-19. Limiting analyses to patients greater than 40 years of age further reduced our sample size. Nevertheless, our experience of approaching and treating patients with influenza-like symptoms in this era of pandemic SARS-CoV-2 is useful and more generally applicable. In one State Hospital Network of the cohort this spring, more than 90% of patients admitted to the hospital with appreciable respiratory distress had positive RT-PCR for SARS-CoV-2 [40], so it seems reasonable to infer that it would be similar for patients with influenza-like illness presenting at the emergency room. Also, our study involved a range of treatment medications assigned by HMO physicians using their clinical judgements, rather than mandated by study design. Clinical treatment decisions allow for the possibility that sicker patients get more or more aggressive treatments, creating the potential of confounding by indication. The comorbidity distributions of the various treatments as shown in Table 1 suggest that except for shortness of breath, patients not treated with HCQ or prednisone may have been slightly less symptomatic than treated patients. However, this would if anything have tended to reduce the magnitude of risk lowering that we found for these medications toward the null. A pattern of chronic comorbidity differences is not apparent in the table; nevertheless, our results were adjusted for those comorbidities where associations with risk of hospitalization were observed (Table 2). In spite of the aforementioned, our study was large enough to have observed statistically significant results and was based on actual clinical conditions and data recorded in active clinical charts, to enable reasonable inference about lack of reporting biases in the analyzed data.

Our analyses thus show that it is possible to give HCQ with companion medications in an early stage protocol that proves to be safe, and warnings about cardiac arrhythmia adverse events are unnecessary unless significant contraindications are known. Treatment-failure mortality, while small, is still the major concern of patient management. Our new protocol is continuing in clinical practice in our HMO, and we hope for it to be more generally applied across the rest of Brazil as quickly as possible.

5. Conclusion

We found early outpatient use of HCQ and prednisone, both as individual prescriptions and used together, to lower the risk of hospitalization in symptomatic high-risk COVID-19 patients presenting for primary care at the emergency rooms of our large HMO in Brazil. Other than the small numbers of treatment failure, no potentially life-threatening adverse events were recorded with medication treatment. These medications were found to be safe and beneficial for early high-risk outpatient treatment of COVID-19.
