

We, from the **European Foundation for Complementary and Integrative Traditional Medicine – FEMTCI**, located at C. Larache, 1043870 – Amposta Tarragona (Cataluña)| Spain, publicly express our support for the law project 5983/2019 which Regulates the multidisciplinary exercise of acupuncture in Brazil.

We understand that, with the Acupuncture Regulation, Brazil will take a big step towards improving the quality of training courses and professionals, as well as facilitating access to research and the Brazilian population for quality care. Brazil today has already done an excellent public work with Integrative and Complementary practices since its implementation throughout its Public Health System, thus, regulating Acupuncture will be a historic achievement for Brazil and its people.

We also express our full support for the regulation of acupuncture in Brazil to be multidisciplinary among health professionals, as is already the case in several countries, and not only exclusive to the medical profession, but to all professionals with the proper technical training.

For all these reasons, we forward this public letter on behalf of Ms. Camille Elenne Egidio, addressed to representatives of the Brazilian National Senate, especially to Senator Eduardo Girão, as an incentive for the approval of Acupuncture regulation in Brazil as soon as possible.

Amposta, may 6 2022

Dr Ramon Ma Calduch, Vicepresident FEMTCI
